SIR, — The circular from the College of Surgeons to ascertain the opinion of the Fellows upon the vital principle of representation of Members upon the Council has been issued, and I venture to say is found by most of an unsatisfactory character. These are the questions asked:—(*a*) In your opinion should Members of the College be allowed to vote for Fellows as members of the Council? (*b*) In your opinion should Members of the College be eligible for seats on the Council? In answering them I hope each Fellow will ignore the unqualified nature of the questions, and state his views more broadly, and rather with reference to the resolution submitted and carried at the last general meeting of the Fellows and Members on Nov. 4th—viz., "That it would conduce to the welfare of the College, and tend to promote the interests of medical polity and education—(*a*) if Members of ten or more years' standing were empowered to vote (separately or conjointly with Fellows) in the election of the Council; and (*b*) if Members of twenty or more years' standing were eligible to sit in the Council to the extent of not more than one-fourth of the Council." I would also ask the Fellows to take this opportunity of expressing their opinion on the action of the Council in lowering and depreciating the status of the Fellowship, by the adoption of a modified examination to Members of a certain standing—a measure inflicting great injustice upon the younger Fellows (especially the provincial ones) in many ways, though perhaps of little moment to those senior ones who hold seats on the Council. The Fellowship was an evidence of a thorough anatomical and surgical knowledge, and to obtain it extra years of study were required, often involving no little sacrifice. The profession and the public relied upon it. It will be so no longer. By their action in this, and by their conjoint action with the College of Physicians in refusing to-coperate with the Apothecaries' Society to bring about practically a one-portal system for London (so much to be desired by all who have the welfare of the profession at heart)—by these two acts alone the Council have shown their inability "to read the signs of the times," and have forfeited the confidence of not a few of their present constituents. The time has come when a radical change in the management of the College is not only desirable, but absolutely necessary. I could have said much more on both the above topics, but fear to trespass on your valuable space. The legal right of Members has been so fully discussed that further comment is unnecessary. In conclusion, I will mention briefly a few of the alterations that might fairly be conceded, and which would probably benefit the College, its Fellows, and Members. (*a*) The Council to consist of three-fourths Fellows elected by Fellows only, and one-fourth either Fellows or Members elected by Members only. Voting-papers to be permitted. (*b*) The president of the College to be a Fellow or Member of a certain standing, and elected annually at a general meeting of Fellows and Members. (*c*) The recent modifications affecting the status of the Fellowship to be abolished. The Council to have the privilege of recommending not more than two members of the profession distinguished in surgery for election to the Fellowship at each annual meeting. (*d*) No alteration to be made in the Charter without consulting the Fellows and Members at a general meeting to be called for that purpose.

I am, Sir, your obedient servant,

December 16th, 1886. F.R.C.S.

To the Editor of THE LANCET.

SIR,—Your leading article in this week's issue must echo the sentiments of many provincial Fellows. For some years the academic status of the diploma has degenerated. Not only has the preliminary educational standard been lowered, but even the Primary has been rendered easier by giving a selection of questions to be answered instead of the compulsory "all four" as formerly obtained. Now the Council, without consulting the general mass of Fellows, propose to still further depreciate the title by admitting, without any test of their fitness for such an academic distinction, a certain number of Members annually, and, secondly, to admit any Members of fifteen years' standing to the Pass without subjecting them to what you have justly called the *pons asinorum* of aspirants—the dreaded Primary. What privileges have the general mass of provincial Fellows? They care little about the rights of voting, and a seat on the Council, as is rightly urged in your leader, is within the reach of a very small minority. Have they ever been consulted on vital questions relating to the College till this last week? The chief privileges, then, of provincial Fellows are the academic distinction and status the title gives them. However wisely and delicately the proposals of the Council are carried out, many an injustice would be done to Fellows in small provincial towns, where the value of the Fellowship has begun to be appreciated. An imaginary case may easily be drawn. An M.R.C.S., through hard work and local influence, has acquired a large practice; he is a good all-round man, but not in any way well read or of any scientific learning. He is acquainted with many London Fellows from having sent them cases up from the country periodically. Without the slightest trouble he would receive the highest honour the College could confer on him, without ever having read for or passed anything but a minimum examination. Not only does he suddenly become the academic equal of the man who has devoted three or four years to the acquisition of the title, but he really becomes his superior, for it cannot but get bruited abroad that the Fellowship was conferred on him because he merited it, whilst the other man only got it by examination, and any man can pass examinations who has (not necessarily brains) but time, money, and applicability. Where then would be Sir Benjamin Brodie's explanation of the origin and institution of Fellows? It seems as if the London Fellows (as represented by the mass of the Council) hope to retain their vested interests by simply diluting them with a batch of new Fellows. The provincial Fellows, on the other hand, wish the integrity of the title to be maintained, or, if possible, made more select still. Let the Members have their electoral rights, and let them even have a chance of a seat on the Council under certain restrictions, and what have the Council to fear? The following two paragraphs, taken from a letter signed "Historicus," in your issue of Dec. 11th, deserve repetition and re-repetition: "The academic status (of the Fellowship) is being persistently debased in the silly hope of allaying the disaffection of a few Members by the offer of a cheap but degraded Fellowship"; and "The truth is, that the intellectual and professional prestige of the Fellowship is being seriously prejudiced by its forced association with an exclusive and obnoxious electoral privilege—a privilege, be it remembered, which is also an usurpation."

I am, Sir, yours faithfully,

Dec. 13th, 1886. A PROVINCIAL FELLOW.

THE HOSPITAL FOR WOMEN, LIVERPOOL.

To the Editor of THE LANCET.

SIR,—I shall feel much obliged by an early insertion of the enclosed in THE LANCET.

I am, Sir, yours faithfully,

Rodney-st., Liverpool, Dec. 12th, 1886. J. CAMERON, M.D.

4, Rodney-st., Liverpool, Dec. 12th, 1886.

DEAR SIR,—In a letter addressed to you by Dr. Imlach, and published in THE LANCET of the 11th inst., my resignation as a member of the "Hospital Inquiry Committee" is referred to in the following ambiguous terms: — "On March 8th, Dr. Cameron visited the Hospital for Women as one of the delegates from the Inquiry Committee. In the presence of yourself and the vice-president, the case-books, hospital registers, and various memoranda were examined, and the lady superintendent and nursing staff subjected to a severe cross-examination. At the next meeting of the Medical Institution, he resigned from the Inquiry Committee, declining to serve any longer." To prevent any misunderstanding, I venture to trouble you with an explanation of the cause (omitted by the writer) of my resignation. After my visit with Dr. Alexander to your hospital, Dr. Imlach was taken seriously ill, and for a time his life was in extreme danger, and I was reluctant, under these circumstances, to continue an inquiry which, by the anxiety it was likely to occasion, I feared would aggravate his condition. I

Digitized by Google

availed myself of the first opportunity (the meeting of the Medical Institution alluded to by Dr. Imlach) to tender my resignation, stating publicly to the members the grounds of that step. I should wish to add that I highly approve of the report of the Inquiry Committee, which, I consider, takes a very moderate view of the objections to the operation in question. I remain, dear Sir, yours faithfully,

J. CAMERON, M.D., &c.

The President, Hospital for Women, Shaw-street.

P.S.—I am sending a copy of this letter to THE LANCET.

ARE SMALL-POX AND COW-POX ONE AND THE SAME DISEASE?

To the Editor of THE LANCET.

SIR,—In reply to Mr. Fleming's query, I would remind him of the following points:—The physical characters of the microbes both of small-pox and vaccinia are identical, if we neglect difference of size. In both diseases the micrococci tend to arrange themselves in groups of four, and in the early stages the Malpighian mucosus is the site selected for the development of each. Pincus's description of the microscopical changes in vaccinia corresponds closely with that by Weigert of the early development of the small-pox pustule. Localisation in vaccinia probably results from the local nature of the inoculating process, the irritated parts offering the most eligible sites for exhaustion of the local manifestations. If these were excised within forty-eight hours of inoculation a more generalised exanthem would show itself (Chauveau). Infection in variola is general, not local. Constitutional symptoms consequently precede the rash. The process is centrifugal. In vaccinia the process is centripetal, and general symptoms, when present, come late. When variola is *inoculated* the same thing happens, but then the infective process is sufficiently vigorous to induce secondary general infection and a disseminated eruption. Mr. Fleming can scarcely question the identity of cow-pox and vaccinia. He, however, dislikes the term "attenuation," though he will scarcely deny that Pasteur and Toussaint have independently proved the possibility of attenuating the virus of charbon by the aid of altered temperature, or that they have *fixed* the attenuation thus obtained, so constituting of it a generic character. If this be possible with other microbes, why not with that of variola? Man's temperature is about 37·5°C: ¾°C higher in the horse, and as much higher still in the cow. These conditions, judging from analogy, are those favourable to attenuation. Virus from horse-pox or from cow-pox induces in man a characteristic eruption; the former sometimes causing marked constitutional symptoms with stray vesicles; the latter is less active, and seldom develops to so great an extent. But, after passing through the cow, horse virus loses its excessive activity, and acquires the name of cow-pox, which, when used for inoculating man, causes no general symptoms. Repeated inoculations of cow-pox on other cows tend to fix the character of the virus—corresponding thus to the fixed attenuations of charbon virus mentioned above. In plants, modifications corresponding to such attenuations are possible. Why not with microbes? Many authors have deemed it right to affirm that variola, horse-pox, and cow-pox are not only interchangeable, but that infection with one of them is necessary to the production of the disease itself in the others. May we not go a step further, and suggest that the *same cause*—a specific virus floating in the atmosphere—may account for all of them, any differences being satisfactorily explained by variations of soil and temperature? In this way so-called "spontaneous cow-pox" would be easily accounted for; the protective power of any one disease as against infection with the others would be more easy to understand, and it would be unnecessary to say, with Mr. Fleming, "that small-pox and cow-pox were different and antagonistic diseases." Though man may as yet have been unable to accomplish the artificial transmutation of small-pox into cow-pox, nature has methods with which we are unacquainted, but whose results Jenner's great discovery has enabled medical science to utilise. If Mr. Fleming will refer to Warlomont's Manual of Animal Vaccination, he will find more extensive reference to the subject than your columns can admit from,

Yours obediently,

Pall Mall East, S.W., Dec. 1886. ARTHUR HARRIES.

DEATH OF A NIECE OF HARVEY.

To the Editor of THE LANCET.

SIR,—In the obituary column of to-day's newspapers is recorded an event which is suggestive of interest to our profession. "On the 1st inst. at Upp Hall, Braughing, Mrs. Towers, in the ninety-eighth year of her age, the last surviving daughter of the late Admiral Sir Eliab Harvey, of Rolls Park, Essex." In the press and hurry of our day's work, the notice is likely enough to pass unheeded; but that it refers to the last of the seventh generation in direct descent from that prosperous city merchant, Eliab Harvey of London and Chigwell-park, brother of the discoverer of the circulation of the blood, should be enough to claim a moment's attention from anyone who has the slightest reverence for the past. From time to time, outside our special professional life, the public interest is awakened by the overthrow of some fresh pretender to the rightful glory of the immortal physiologist and physician, by the erection of a statue in his native place, by the reverent re-entombment of his remains, or by the publication in facsimile of the note-book in which he himself recorded his observations and his labours. But gratifying as these events may be, they lack the living breathing kinship that the above simple announcement awakens. The deceased lady was the last of nine children of Admiral Sir Eliab Harvey and Lady Louisa, daughter of Earl Nugent. Her three brothers died childless in their father's lifetime, and, in that line at least, with her the name of Harvey ends. How the gallant old admiral, who for forty years fought the battles of his country, and ended by commanding the *Téméraire* at Trafalgar, is duly set forth on the marble tablet in Hempstead Church, where he sleeps with fifty of his kindred. His birth in 1758 takes us back a century ago, and those who are curious in such matters may fill in the steps 'twixt him and his first namesake, if they consult the pedigree of the Harvey family as set forth in Wilson's History of S. Laurence Pountney, London, 1831, at page 228, and the coffin inscriptions in the Harvey vault, lately published in the Miscellanea Genealogica et Heraldica, vol. i., series 2.

I am, Sir, yours faithfully,

W. H. ALLCHIN.

Chandos-street, Cavendish-square, W., Dec. 4th, 1886.

A "NEW" METHOD OF EXCISING THE KNEE-JOINT.

To the Editor of THE LANCET.

SIR,—I see by your report that at the Medical Society on Monday night Mr. Herbert Allingham described as such the method of making a long vertical incision and dividing the patella into two lateral halves. I have twice within the last three or four years shown such a case at the West London Medico-Chirurgical Society, and the method was not new then. Anyone who will refer to my "Index of Surgery," third edition, p. 128, will see it briefly noticed there. I believe the priority of performance of this operation is due to Professor Ollier, and I am certainly of his opinion that it ought to be reserved for cases of injury to the knee-joint. It does not, according to my experience, possess a single one of the advantages which your report states that Mr. Allingham claims for it. On the contrary, it gives comparatively limited and incommodious access to the joint, and especially to its posterior and lateral recesses. In any case which proved, when the joint was opened, to be one in which the bone was very little affected, it would still be impossible, through this perpendicular section, to erase the back of the joint properly without excising much healthy bone, and thus making the prospect of restoration of mobility practically hopeless. Compare with this the plan, originated by Volkmann and adopted by Ollier and others, of opening the joint by transverse division of the patella. Surely no one who has tried both can doubt the superiority of the latter. The quadriceps is no more weakened by one than by the other. There is no ligamentous or fascial structure divided in the operation which cannot be reunited by buried sutures just as effectually as can the patella itself. On the other hand, when the case to be dealt with is one of *injury*, the indications are quite different, and the longitudinal incision, from its possessing, although in a small degree, the advantages common to all longitudinal incisions as com-

Digitized by Google

pared with transverse, may be reasonably preferred, for after injury there is no tubercle to be ferreted out of corners, but simply the indication to remove just as much and just as little injured bone as will suffice, and to cleanse the joint of blood and dirt.

I remain, Sir, your obedient servant.

Dec. 1886. C. B. KEETLEY.

NOTE ON THE EXISTENCE OF IODINE IN THE FREE STATE IN A MINERAL WATER.

To the Editor of THE LANCET.

SIR,—It has been known for many years that the water of the Woodhall Spa, near Lincoln, is exceptionally rich in bromides and iodides. In the course of an investigation recently conducted by me, I have made an observation which appears to be important. I find that there is free iodine in the water—not a mere trace of free iodine, but sufficient to impart to the water a brown colour of considerable depth of tint. The proof of the presence of the free iodine in this water is very striking. There is the formation of the blue iodide of starch when a little starch paste is simply poured into the water. Another very striking characteristic is that when the water is shaken up with one-twentieth of its volume of bisulphuret of carbon it loses its brown colour, whilst the bisulphuret of carbon assumes a pink-violet colour, owing to the solution of iodine by the bisulphuret of carbon. So far as I am aware, this is the first instance in which free iodine has been found in appreciable quantity in a natural water. For many years the Woodhall Spa has been celebrated as a valuable remedy in skin diseases. The fact that it is a solution of free iodine is interesting in this connexion, and is well worthy of the attention of the medical profession.

I am, Sir, yours obediently,

Dec. 15th, 1886. J. ALFRED WANKLYN.

THE TREATMENT OF ALCOHOLISM BY STRYCHNINE.

To the Editor of THE LANCET.

SIR,—*A propos* of your interesting leader on the above subject published in THE LANCET of the 16th ult., I should like to be allowed to make a few passing remarks. The treatment in question, as recommended from theoretical and clinical researches by Luton, Giacomini, Magnus Huss, and other continental *savants* of the medical profession, and now tried by Russian practitioners, notably by Drs. Popoff and Talvinski, was extensively experimented upon, so far back as 1869, by Deputy Surgeon-General F. G. Joynt, who was at the time medical officer in charge of the European General Hospital, Bombay. I am not aware if any other army medical officer followed his method of treatment; but suffice it to say that the drug proved in his hands a sheet-anchor in cases of ebriositas (now termed alcoholism) and delirium tremens. I may *en passant* mention that Dr. Joynt's solution of strychnia was, unlike the British Pharmacopœial preparation, made with dilute nitric acid and a smaller proportion of the alkaloid, and the dose usually exhibited was twenty-four minims two or three times a day.

I am, Sir, yours faithfully,

Aden, Nov. 25th, 1886. A. LYON MERCADO, S.M.D.

ST. ANDREWS UNIVERSITY.

(*From a Correspondent.*)

THE Senatus Academicus of the University of St. Andrews has presented a memorial to the Right Hon. the Secretary of State for Scotland, praying for two additional chairs for its medical faculty—viz., a chair of anatomy and a chair of botany. The St. Andrews Graduates Association are also moving in the same direction. About six weeks ago a deputation appointed by the University had an interview with the Right Hon. the Secretary of State for Scotland and the Right Hon. the Lord Advocate, urging the propriety of augmenting the medical chairs to the extent indicated, by introducing a clause or clauses to that effect into the forthcoming "Universities (Scotland) Bill." St. Andrews has always felt the necessity of increasing its teaching medical staff, and attempts have been made from time to time in this direction for very many years past. The present seems a favourable opportunity for attaining the desired end. The University is desirous of increasing its teaching staff to enable it to give two *anni medici*, the period of residence required for medical graduation at the Scottish universities. With two additional medical chairs, St. Andrews would not only be able to give the first two years of the medical curriculum, but it would be enabled to draw upon the Extra Academical and Hospital Schools of the United Kingdom for the last two years, an arrangement which could not fail to be very convenient to many aiming at a university medical degree. St. Andrews has now a seat at the General Council of Medical Education and Registration of the United Kingdom, and is splendidly equipped as regards the teaching of chemistry, physiology, and zoology. It has also a very fine medical library and museum, and the amenities of St. Andrews as a place of study are everywhere recognised. Of late years St. Andrews has made great strides in science teaching, and if it only succeeds, by public or private endowment, in obtaining its present quest, it may in the future become as well known for its medical teaching as it has in the past been for its divinity and arts teaching.

LIVERPOOL.

(*From our own Correspondent.*)

THE MEDICAL INSTITUTION AND THE HOSPITAL INQUIRY COMMITTEE.

THE special general meeting of the members of the Medical Institution, which was held on the 3rd inst., to receive the report of the Hospital Inquiry Committee, was largely attended, there being more than a hundred gentlemen present. The President (Dr. Nevins) was in the chair. The report was read by Dr. Wm. Alexander, the secretary to the Committee, and was listened to with the deepest interest by all present, each of whom was furnished with a printed copy of the report. At its conclusion the adoption of the report and a vote of thanks to the Committee were moved by Mr. McCheane, consulting surgeon to the Lock Hospital, and a former president of the institution. This was seconded by Mr. C. B. Wilson, consulting surgeon to the Lying-in Hospital, and after some discussion it was carried by a large majority. Dr. Imlach spoke at considerable length, and as some of his statements were repeated in a letter which he addressed to the President of the Hospital for Women (a copy of which appeared in THE LANCET of the 11th inst.) it appears desirable to notice some points in detail. Dr. Cameron's reason for resigning his seat on the Committee was a purely personal one. He had been called in consultation with Dr. Glynn to see Dr. Imlach when the latter was dangerously ill, and expressed an opinion that the inquiry should not proceed; but as this did not meet with the views of the other members of the Committee he resigned his seat. Mr. Bickersteth's reason for ceasing to attend was because he found himself quite unable to devote the time which he considered necessary to so important an inquiry. The primary object of the Committee was not to prepare a scientific report for the profession, but a report on the management of the Hospital for Women to the Medical Institution. The Committee were only asked to go into the cases which were the subject of operations during the year 1885. Between the early summer and the month of October the Committee held no meeting on account of the trial of Casey *v.* Imlach. The only thing done by the Committee was to request information from medical practitioners as to cases which they had seen of patients who had come under their care before and after being patients of the hospital. This information was given quite impartially and in confidence. That it could have had any prejudice against Dr. Imlach in the trial was disproved by the jury giving a verdict in his favour, without waiting for the judge's summing up. The general opinion of the profession here is that the report is a most admirable one, being exhaustive, fair, impartial, and most moderate. Too much praise cannot be given to the members of the Committee for their prolonged and self-denying devotion to the extremely invidious duty cast upon them.

DEATH OF DR. RICHARD JOHN LUPTON.

This gentleman, whose death was noticed in last week's LANCET, will be well remembered by many an old fellow-student. He commenced his medical studies in 1860 at the Liverpool Royal Infirmary School of Medicine, where he studied for three years, becoming subsequently a student at University College, London, and at Aberdeen, where he graduated with honours. He returned to Liverpool in 1866, and commenced practice in the neighbourhood wherein he resided until his death. He held office formerly as honorary assistant surgeon to the Ladies' Charity and Lying-in Hospital, and at the time of his death was one of the honorary medical officers of the Hospital for Women. For the vacancy thus created there are already many candidates.

THE ROYAL INFIRMARY.

At a special general meeting of the trustees just held, Dr. Waters was elected consulting physician to the Royal Infirmary, having recently resigned the office of physician; and to the vacancy thus created Dr. Richard Caton, physician to the Northern Hospital, was elected without opposition. Dr. Waters is well and favourably known as an authority on chest diseases, and it is hoped that he has many years of useful work before him.

LOCAL HOSPITAL CHANGES.

At the Northern Hospital there is a vacancy for a physician, in place of Dr. Caton, appointed to the infirmary, and Dr. James Barr is a candidate. At the Stanley Hospital there are vacancies for a physician and a surgeon, owing to the resignation of Dr. Costine and Mr. Sheldon, who have each held office for the full period of twenty years. For these vacancies Dr. Whitford and Mr. Robert Jones are already candidates, and others will probably be forthcoming.

Liverpool, Dec. 15th.

NORTHERN COUNTIES NOTES.

(From our own Correspondent.)

GATESHEAD WORKHOUSE CHILDREN'S HOSPITAL.

MR. KNOLLYS, the Local Government Board Inspector for the district, has made some serious statements as to the condition of the children in the hospital of the workhouse at Gateshead. The statements have excited much public attention, and our local press has been also much occupied with the matter. Mr. Knollys says that on the occasion of his visit to the hospital he found twenty-eight boys and girls, ranging from thirteen years of age downwards, all suffering from some disease of the skin. It is practically impossible, from the structure of the building, to keep the sexes separate; that the floor was damp, and the underclothing on the beds was rendered foul by discharge; that on the day of his visit twenty-two out of twenty-eight children slept two in a bed; that the pillows were dirty, and that the sheets were little better than a patchwork of rags; that the straw of the beds actually came in contact with the skin of the little patients, which from the nature of their diseases was naturally tender; that four or six, and on one occasion eight, boys had washed in the same water; that eight or nine, and on one occasion only four, towels had been used for drying the skins of twenty-seven children; that in one room he found a woman suffering from a syphilitic disorder, that three children suffering from measles were in the same room, and that the room, which could not be ventilated as it should be, had a most offensive smell. He further stated that he had again and again complained of the dirty and uncared-for appearance of the children in the building. Mr. Knollys made also suggestions to the guardians that a competent nurse should be appointed instead of the present pauper nurse, and that the building be no further used for its present purpose. The guardians have been highly indignant at Mr. Knollys' charges, some of which they have denied, but some of the minor ones have been admitted. Some of the more indignant guardians admitted that they had not visited the hospital in question. Dr. Cook, the medical officer of the workhouse, explained that the wooden building condemned by the inspector was intended only to last ten years, and was only regarded as a temporary building for the reception of patients during the fever epidemic which existed when it was erected. The number in the house had increased, but the accommodation had not increased in proportion. Dr. Cook further explained that the accommodation he had formerly at the "house" for isolation purposes had been taken from him, and he had to take on himself responsibilities which he did not feel justified in taking. He had to use the best means he had at hand, and to take into the hospital a number of cases suffering from very infectious ailments of the eye. The hospital was full, and he had no means of isolating disease. The feeling here is that a state of things such as described by the inspector and their own medical officer is not creditable to the intelligence, to say nothing of the humanity, of the guardians of an important and wealthy borough like Gateshead.

NEWCASTLE HOSPITAL SUNDAY.

The returns on Hospital Sunday and Saturday collections continue to show a decided improvement on last year's. The fourth list shows that £2000 12*s.* 9*d.* has been received from places of worship, as against £1898 last year. From workshops £1580, as against £1231 last year. This improvement is all the more gratifying taking into account that many of our industries are far from busy this winter.

SCARBOROUGH HOSPITAL.

The report of the house-surgeon, Dr. Kenneth Fraser, shows that during the month of November he made 107 visits to patients' houses in connexion with dispensary work. There has been an epidemic of measles in the district, I believe.

NEWCASTLE INFIRMARY.

In view of the financial position of the Newcastle Infirmary, a special committee has been appointed to take evidence, and the public is invited to take part in the matter and to offer any evidence likely to conduce to the object in view—namely, the placing of the institution in a more satisfactory financial position.

Newcastle-on-Tyne, Dec. 13th.

IRELAND.

(From our own Correspondent.)

ROYAL COLLEGE OF SURGEONS IN IRELAND.

THOSE candidates who failed in one subject only at the recent First and Second Professional Examinations will be permitted to take out lectures and hospital practice this year and go up in July next for the examination they missed. Those who fail in more than one subject lose an entire year of their medical studies, and no credit will be given for hospital and lectures taken out. There will be a supplemental examination for the Third Professional Examination, but not for the First and Second, and candidates who are allowed in for examination will pay, instead of three guineas for re-examination, a fee of eight guineas. At present there are three lady students attending the lectures on Chemistry now being delivered by Sir Charles Cameron at the Medical School of the College. There will be two candidates for the Vice-Presidency of the College at the election in June next—viz., Mr. Henry Fitzgibbon and Mr. H. Gray Croly, both being visiting surgeons to the City of Dublin Hospital.

THE EPIDEMIC OF ENTERIC FEVER IN CORK.

Although the epidemic of fever recently referred to in these columns may mainly be attributed to the defective sanitary condition of the town, yet undoubtedly the water-supply is not all that could be desired. For example, at Macroom the sewer matter is discharged into the river from which the supply of water for the citizens is obtained, and no doubt there are other possible sources of pollution. At the suggestion of the public analyst monthly analyses of the water will be made for the future, as is the practice in all large cities. During November over seventy cases of enteric fever were under treatment in the hospitals or by the various dispensary medical officers, with a mortality of about 3 per cent.

THE SANITARY CONDITION OF THE DUBLIN BARRACKS.

On several occasions attention has been drawn to the alleged insanitary condition of some of the Dublin barracks, more particularly the Royal Barracks; and it was a matter of surprise, considering the number of deaths from enteric

Digitized by Google

fever occurring in the latter institution, that a thorough investigation was not at once ordered by the military authorities. At last, however, they appear to have awakened from their lethargy, and I am informed that the Commander-in-Chief has appointed a commission to investigate and report on the subject. Grave doubts have existed for years as to the sanitary state of the Royal Barracks, and the commission, by a thorough overhauling of the sewerage arrangements, will carry out an investigation, which is urgently required.

MUSCULAR ANOMALY.

There is at present in the dissecting-room of the Ledwich School of Medicine an example of the biceps flexor cubiti taking its origin by three heads instead of two, so that it might be designated an anterior triceps. The third head came off close to the insertion of the lower part of the coraco-brachialis muscle, on its outer aspect, and passed to the posterior part of the muscle. Each head was well defined. This anomaly I believe to be extremely rare.

Dublin, Dec. 14th.

BELFAST.

(From our own Correspondent.)

THE VACANT SENATORSHIP OF THE ROYAL UNIVERSITY.

A LARGE number of the northern graduates, who are Presbyterians, had agreed to support the candidature of Professor O'Sullivan of Cork, as they believed that Cork should get a share of the representation on the Senate of the Royal University, and, further, as the vacancy was caused by the death of the Rev. Dr. Kavanagh, they thought that it was but just that another member of the Catholic body should be elected. However, owing to the recent action of the Government in appointing Dr. O'Dyer, the Catholic Bishop of Limerick, a senator of the Royal University in room of the late Dr. Fleming Stevenson, a leading Presbyterian, the coming contest has assumed a new phase. The members of the Presbyterian Church consider they had a hereditary right to Dr. Stevenson's seat, and they urged the Lord-Lieutenant to appoint Dr. Todd-Martin, a very distinguished graduate of the late Queen's University. As this recommendation has not been attended to, it is feared by many that Professor O'Sullivan may at the eleventh hour lose his expected northern support.

THE LAGAN NUISANCE.

At the present time a great deal of discussion is taking place, both in the public press and in private circles, in reference to the Lagan nuisance. This river is always greatly polluted by receiving the abominable Blackstaff, as well as many other sewers, and at certain times of the year, especially in summer, the smell arising from it is simply intolerable. The Town Council propose building two main sewers, one on each side of the Lagan, which would intercept all the various drains which now open into that river as well as into the Blackstaff, and which are planned to discharge their contents in deep water far beyond the harbour. Further, it is arranged to narrow and deepen the channel of the Lagan and to construct substantial banks. A section of the public are supporting another scheme, which aims at purifying the river by the construction of locks. By this plan the present offensive mud-banks would be placed permanently under water, thus rendering them innocuous; an ornamental pond suitable for boating would be formed; and the flow of the Lagan would be used to increase the velocity, dilute, and direct the flow of the Blackstaff and sewers at present discharging above the Albert Bridge, so that the sewage would be carried out to sea and not returned by the flow tide. It is satisfactory to find that public opinion is being aroused to the necessity of having this terrible nuisance abated.

THE ROYAL HOSPITAL.

As the financial condition of this charity is again in an unsatisfactory state, it has been suggested that, in commemoration of the Queen's Jubilee, a sum of money should be subscribed, the interest of which could be devoted to this institution; and a very energetic member of the board of management writes to the press advising that the hospital should be removed to the place where the old charitable society is at present located. This would be a most desirable change, as there is a grave suspicion that the hospital is placed in anything but a good sanitary situation, and its present size is not adequate to the requirements of such a rapidly increasing town as Belfast. During the present session there are 130 students receiving clinical instruction, while last winter there were 162. The appointment of a new matron took place on Saturday, when Miss Isbitt (Canterbury) was unanimously chosen out of twenty-six candidates.

LISBURN DISPENSARY.

At a meeting of the Committee of the Lisburn Dispensary district held on Monday, Dr. James Jefferson, the brother of the late medical officer of the district, was appointed dispensary doctor. The salary of the late Dr. John Jefferson was £100 per annum, but the Lisburn Board of Guardians decided, in view of the present agricultural depression, to reduce the income to £80, and at this salary Dr. Jefferson was elected.

DEATH BY SUFFOCATION.

Two women, mother and daughter, were found dead in a house in Belfast on Monday. The discovery was made by another daughter who slept with them, and who was so overcome that she did not awake until twelve o'clock, seven hours after her usual time. On the police being informed, they searched the house, and found a quantity of smouldering cinders in a vessel under the bed. The vapour from this vessel in a small and badly ventilated room is supposed to have suffocated the women, although there is a supposition that the deceased may have been injured by eating tinned meat, which, it is said, constituted the supper.

Belfast, Dec. 7th.

PARIS.

(From our own Correspondent.)

PROFESSOR PETER'S INAUGURAL LECTURE.

ON Dec. 8th Professor Peter delivered his first lecture on Clinical Medicine at the Hôpital Necker before a crowded audience, composed of students and practitioners, selecting "The Clinical Aspect of Contemporary Medical Doctrines" as his subject. Sixty-seven years ago, said the lecturer, a weak, shy, and sickly man, alone in the hospital, without assistants or appliances, made a discovery that was to revolutionise the medical world. The man was Laennec; the discovery, mediate auscultation. Mediate percussion had been discovered towards the middle of the previous century by Avenbrugger, but it has passed unnoticed except for a curt mention by Stoll and Van Swieten, and remained unknown until the treatise of the Viennese physician was translated and commented on by Corvisart. Corvisart, the pupil of Avenbrugger and Morgagni, was the teacher of Laennec, and bent his mind in the direction of his subsequent inquiries, to which inquiries the medicine of today owes much of its precision. But precision in medicine is only possible for the recognition of the accomplished fact—that is, the physical change in living matter, the lesion and its signs. The *morbid act*, disease in its evolution, escapes precision; for the act, which is the *to become* is subordinate to the vitality of the affected organism, dependent upon the forces of the organism, and, like these forces, infinitely variable. Laennec definitely introduced into medicine pathological anatomy and semeiology, and showed the relationship between the symptoms and the lesion. He taught us to be localisers. To take, for example, pneumonia. The old doctrine of *febris peri-pneumonica* was set aside, and inflammation of the lung is treated as a local disease, of which the accompanying pyrexia is only a symptom. The *disease* in its pathological anatomy and physical signs is discussed at length, but the *patient*, as revealed in the general symptoms and the type of the malady, comes in for but scant consideration. From the stethoscope of Laennec have sprung numerous other instruments of precision; and thus we have the opthalmoscope, the laryngoscope, the otoscope, and the microscope, which, together with chemical analysis, enable us to make the necropsy, as it were, of the living body. From precision to prelesion, in the diseased organs we have sought the diseased tissue, and in the tissue the morbid element. It might have been thought that beyond this there was nothing, but this were to reckon without the microbe, the

Digitized by Google

universal cause of parasitic disease. For the new school the microbe is not the lesion, but its agent. For instance, pneumonia, the local inflammation of the lungs, is produced by the pneumococcus, but the pathogenic agent can only accomplish its mission by infecting the organism. Thus we have the work of Laennec upset by his followers, localisation *à outrance* leading to generalisation; and thus the histologists, become parasitists, have returned to the old idea of pneumonia, a general disease. The lecturer reminded his hearers that he had professed this opinion seventeen years ago, and that he had said in his clinical lectures, "The lesion is to the tissue what the symptoms are to the forces. The fever is the disease, of which the lung affection is a consequence; and as the type of the fever, whether inflammatory, nervous, or bilious, &c., varied, so should the treatment. We have not to do with pneumonias, but with pneumonic patients." M. Peter then alluded to Virchow's magnificent conceptions in cellular pathology, and his explanation of heterologous formations by heterochronism and heterotopism, and the final overthrow of these views by the discovery of the bacillus. For a time Koch was triumphant, but the supreme reign of the bacillus has not been long. It has been shown that the extent of the disease does not coincide with the quantity of the bacilli, and the partisans of these microorganisms now say, "It is not the bacillus that makes the disease, it causes it only indirectly by the secretion of a ptomaine." At the present time the whole of pathology is dominated by pathogeny, and this by bacteriology. Bacteria here, bacteria there, bacteria everywhere. Every day we learn with stupefaction that yet another disease is parasitical. As with pneumonia, so with rheumatism and malignant pustule. There are bacteria in the saliva, which are useful in the mouth, but morbiferous in the lungs, where they manufacture pneumonia. There are bacteria to make us feverish in typhoid, others to produce algidity in cholera; some blow hot, others cold. The lecturer passed on to the consideration of the treatments which these views have suggested, some considering that in typhoid the microbe gives rise to fermentation, and this to pyrexia Hence the system of treatment by cold baths, which, although irrational as a general practice, has its applications in certain cases. It is the recognition of suitable cases, which we have learnt from the exclusive practice of Brandt, that forms a real progress. Others, always with an eye to the destruction of the morbiferous microbe, would make injections into the lung without considering that, if even one microbe alone were to escape, it would quickly reinfect the organism by its reproduction. We have learnt, however, that our patients have often a far greater power of resistance than might be imagined. A third therapeutic attempt was prompted by the observation that the cholera bacillus did not reproduce itself in a dry medium, and Koch in consequence advised the people of Marseilles to abstain from watering their streets. The microbic theories have led to attempts of medical antisepsis, but this, although well meant, is chimerical. In surgery the case is different. The patient is supposed to be a healthy man who has received an accidental injury; but in medicine disease already exists, and the enemy is in the stronghold. The anti-rabic inoculations are as well meant, but no less chimerical. Irrational in principle, they are inefficacious in practice. They are irrational, inasmuch as they are supposed, contrary to experience, to prevent the development of a disease in incubation, and holding the organism in its power. Vaccine has not this power over incubating variola, and when we seek to prevent the development of variola in an organism in which it is incubating by vaccination, we find that both appear at their appointed time and run their course simultaneously. These so-called anti-rabic inoculations, after having been proclaimed with *éclat*, have failed lamentably. The mortality has been the same in France this year, as in average years—namely, thirty deaths from hydrophobia, fourteen of which occurred in persons having undergone the preservative inoculations. Pathogeny, said M. Peter, in conclusion, is the romance of disease, and pathology is its general history. Study at the bedside teaches us the special history of the patient, and although our flights are less high than in questions of pathogeny, they are more fruitful.

THE FASTING MEN.

Since the appearance of my last letter on Merlatti my sphygmographic researches have met with less favour. The last time I offered to take a tracing of Merlatti's pulse it was pointed out to me that he was in a condition of irritability, which rendered the proposed examination undesirable. Contrary to my anticipations, the fiftieth day of the fast has been attained without serious accident. Yesterday there was some congestion about the head, which terminated with epistaxis. Merlatti is to break his fast at a public banquet to be held this evening. As to Succi, he has got half way through his allotted period, and does not appear to be any the worse for his abstinence.

TRANSPLANTATION.

M. Dubousquet recently related a case at the Biological Society in which he had used grafts from the epidermis of a frog to heal the ulcers resulting from severe burns on the foot caused by molten metal. For the sake of comparison one ulcer was treated with grafts taken from the patient's own skin, the other from that of the frog. In both cases four cuttings were applied, about the size of a half-franc piece each. Cicatrisation took place more rapidly in the ulcer treated with the skin of the frog, and the scar is more supple than the other.

HYDROCARBONS IN HYPODERMIC INJECTION.

Dr. Albin Meunier has made a communication to the Société des Sciences Médicales of Lyons, to which the *Semaine Médicale* calls attention, on the use of vaseline as a vehicle for the hypodermic injection of different essences. Eucalyptol, menthol, essence of cubebs, of sandal, of copaiba, and other substances may be so administered, without untoward symptoms. It is said that these injections give rise to no local troubles and very little pain. For the drugs mentioned one part in five of vaseline is used after filtration repeated three times. For thymol the proportion is one in ten. It has also been found that vaseline dissolves creasote, iodine, camphor, sulphide of carbon, carbolic acid, iodoform (when in previous solution with the essences), and even the alkaloids. For some of these the quantities given are as follows: iodoform, one to eighty; sulphide of carbon, one to fifteen; creasote, one to twenty; iodine, one to twenty; cocaine, one to fifty; digitaline, one to a thousand.

(From our own Correspondent.)

COCAINE FOR MORPHIOMANIA.

Two cases have recently been observed in Cairo of temporary hallucinations after prolonged subcutaneous use of cocaine, as recommended for abuse of morphia injections. The second case occurred in the person of a European doctor, and only lasted two days, during which it was believed that some harmless servants were persecuting him. It now appears that he was accustomed to take morphia injections himself, and was invited to take charge of the first case during his temporary restraint. This first case has been reported by a Greek, Dr. Comanos, in the *Berliner Klin. Wochenschrift* (No. 38), who watched the patient throughout. After being addicted to the morphia habit for several years he recommended his patient, a middle-aged European of excitable temperament, to take as a substitute three-quarters of a grain of cocaine, hypodermically, three times a day. The pain and distress occasioned by the lack of morphia were relieved by this, but the patient gradually and privately increased the dose until he took every day eight and even twelve grains. This induced great mental irritability, singing in the ears, dyspnœa, and hallucinations, which all disappeared upon returning to injections of morphia. But, unfortunately, a painful attack of herpes zoster ensued, and the patient doubled his former cocaine injections to sixteen and afterwards twenty-three grains a day. The symptoms produced by these large doses were trembling of the limbs, lassitude, incontinence of urine, loss of sleep and appetite, excitement, hallucinations, injected conjunctivæ, and a very fixed expression. He believed that burglars lurked in his garden, and he fired revolver shots at imaginary figures by night, eventually nearly strangling one of his servants because he believed he had swallowed a lantern. He was then removed to a hospital, and, on being searched, cocaine, morphia, and many hypodermic syringes were found on him. His drug treatment consisted of three-

Digitized by Google

quarters of a grain of morphia subcutaneously injected three times a day, and in forty-eight hours he was perfectly sane again, and prepared to explain away his hallucinations, especially those of sight and smell.

KASR-EL-AINI HOSPITAL.

The out-patient department, which has been taken over by Dr. Sandwith, continues to supply many interesting cases to the hospital, including those requiring surgical interference, in which the natives have great faith. During the last week, Dr. Milton removed a mass of strumous glands from the neck, excised a portion of the tunica vaginalis for chronic hydrocele, and amputated a breast for a fungating lobular tumour, which protruded entirely outside the skin. These cases were dressed with corrosive sublimate lotion, oiled paper next the wound, and then dry cotton-wool and bandage outside. Many cases of union by first intention have followed this simple dressing, and one of the cases shown to the students was a boy whose knee had been excised for strumous disease, and afterwards dressed in this way. Primary union followed, and in a fort-night the boy was on crutches, with his diseased leg kept off the ground by a high heel on the other foot. The following three operations have been done during the week by the native surgeons. A median perineal lithotomy in a man with chronic bladder disease, but without bilharzia; a supra-pubic lithotomy for a stone weighing 4·9 oz., this being the fourth similar operation which has lately been done by the same surgeon; and the removal of elephantiasis of the scrotum which had followed on an old urinary fistula. Upon the same day a long Guinea worm was extracted from the leg of a native who had lived some years in the Soudan, and stated that similar worms were common there, and often appeared near the genital parts of women. A Guinea worm had been extracted slowly from his other leg last year, but on the present occasion the whole worm was found lying coiled up in the cyst of a chronic fistulous tract. These worms are rare in Egypt.

EXPLOSION OF A SHELL.

Two days ago three British soldiers found an unexploded Krupp shell in the desert, and took it to the armourers' shop in barracks to see what was inside it. It will hardly be believed that they placed it in an anvil and struck it with a sledge-hammer, when it at once burst. One man's skull was badly fractured, with brain protruding, and he died instantly; another also died at once, having received a portion of the shell in his abdomen; and the third required amputation of one arm and one hip-joint, and died during the day. An unfortunate corporal, walking near, lost half his forearm; and a fifth man was bruised in the leg by a bit of the shell, which whistled by him. There are many stories of soldiers using heavy shells as garden-rollers and garden ornaments; and once, after the battle of Tel-el-Kebir, of men being found lighting a fire with a pile of shells to form the hearth.

Cairo, Oct. 29th.

ROYAL COLLEGE OF PHYSICIANS.

A COMITIA of the Fellows was held on Thursday, the 16th inst., Sir W. Jenner, Bart., President, in the chair. The copies of Harvey's "Prælectiones," suitably bound for presentation to Her Majesty the Queen and to His Royal Highness the Prince of Wales, were laid on the table by the President.

A communication from the General Medical Council respecting the length of the curriculum was referred to the Committee of Management. A report from this Committee was adopted.

The report of the Committee of Delegates (see page 1194) appointed by the Royal College of Physicians and the Royal College of Surgeons, to consider the desirability and practicability of granting degrees in medicine and surgery to persons who have passed the Conjoint Examinations of the two Colleges, was presented. Its adoption was moved by Dr. Wilson Fox and seconded by Dr. Handfield Jones. Dr. Allchin moved, and Dr. Norman Moore seconded, an amendment, stating that no scheme shall be deemed satisfactory unless it provide for the conferring of degrees by some University body outside the Colleges themselves, but on which they could be represented. Sir W. Gull urged that the degrees should be confined to clinical medicine and surgery, and he subsequently moved an amendment to that effect. Drs. Curnow, Wilson Fox, Chambers, and Quain also spoke, when the debate was adjourned on the motion of Sir H. Pitman, seconded by Sir G. Paget.

ROYAL COLLEGE OF SURGEONS OF ENGLAND.

AT an extraordinary meeting of the Council of the above College, held on Thursday, the 16th inst., a report from the Delegates of the two Colleges on the expediency of granting the title of Doctor to the holders of the diplomas of the two Colleges was received. After a lengthened discussion certain verbal alterations were suggested, and the report was referred back for the further consideration of the Delegates.

Obituary.

NORMAN CHEVERS, C.I.E., M.D., F.R.C.S.,

DEPUTY SURGEON-GENERAL, BENGAL MEDICAL SERVICE.

ON Tuesday, Dec. 7th, 1886, a number of Indian medical officers, with other friends, assembled at Kensal-green to pay the last tribute of respect to a much-valued and deeply regretted brother officer, whose sudden and unexpected death (from cardiac failure) on Dec. 2nd had caused profound sorrow and surprise; for to observers generally he seemed but quite lately to be in good health, with the prospect of continuance of his valuable life for many years to come. Though he had not lived to attain the allotted duration of human life, having only reached his sixty-eighth year, Norman Chevers lived long enough to do work of an enduring nature such as falls to the lot of few to accomplish, whilst the tenour of his whole career has been, to those who knew him well, a striking illustration of a life lived and ruled by the highest principles. His was, indeed, a blameless and noble life—one in which commanding intellect and vast stores of learning of many and varied aspects were devoted to the advancement of knowledge, the relief of suffering, and the welfare of his fellow-men, especially of those of the great Indian Empire, in which his lot had been cast, his best work done, and his well-merited reputation acquired.

His early career, before proceeding to India in 1848, has been referred to by one who knew him well. He had even then acquired a marked reputation in pathology and medicine, and when he arrived in Bengal was somewhat older than was usual with newly-joined medical officers; but his matured powers and already large experience were soon brought into requisition for the duties of civil medical charge of the important stations of Chittagong and Howrah, and ere long in the very onerous and responsible post of secretary to the Bengal Medical Department. How well those duties were performed was shown by the fact that throughout the whole of the trying time of the Mutiny, when the medical, like other departments, was submitted to great strain, no failure took place in the Medical Department, which was administered by Forsyth and Chevers. But it was during his tenure of the important offices of officiating Inspector-General of Gaols, member of the Senate of Calcutta University, and in that of Principal of the Medical College of Bengal and Professor of Medicine, that the writer of this memoir became really acquainted and continually associated with him during many years of intimate co-operation as colleagues in those institutions, and thus had full opportunity of knowing the great worth and manifold excellencies of the accomplished medical officer whose loss is now deplored.

To no one is the British or native soldier, or the civil population generally, more indebted than to Chevers for the light he has thrown on, and the practical instructions he has laid down for guidance in reference to, those great sanitary

Digitized by Google

questions which so materially influence the health, and consequently the well-being, of all in India.

His able administration of the Medical College raised it to a high standard of efficiency; his teaching of medicine, hygiene, and other cognate subjects was of the greatest public benefit; whilst his writings are regarded as authority of the highest repute: such, for example, are his "Preservation of Health of Soldiers in India"; his "Removable and Mitigable causes of Death"; his great work on "Medical Jurisprudence in India," which won for him the Swiney Prize; that on "Diseases of the Pulmonary Artery" also his many admirable lectures and monographs on subjects directly or indirectly connected with public health; lastly, his work on Indian Diseases, which was completed only just before his lamented death. But it was not in medicine only that his powers were manifested; his acquaintance with literature, archæology, history, and art were equally remarkable, and delighted the friends with whom he conversed, an additional charm being communicated by the keen sense of humour which often found vent in the course of even his most impressive utterances. A fluent and graceful speaker, his addresses always attracted attention, and left a deep impression on those who heard them; no one could be long with him without feeling the influence of his well-stored and highly cultivated mind. But all this was perhaps the least attractive side of his character. It was the simple, loyal, chivalrous nature which charmed. He was incapable of anything mean. In all senses in which the word can be applied he was a gentleman. All he did was directed by a high sense of principle and honour. If he erred, it was not from lack of these guides; it might have been from an overestimate of their claims. He did what he thought was right, guided by that which to him was the highest light, and few men have come nearer to the mark aimed at than he did!

Chevers retired from the service in 1876 with the rank of Deputy Surgeon-General, and it was not until 1881 that Government, in recognition of his services, conferred on him the dignity of Companion of the Indian Empire. His labours were not, however, completed, for he was doing much good work up to the last; and he was making notes but a few hours before he died.

As President of the Epidemiological Society, he rendered further service to the subjects of epidemiology and disease, whilst his lectures and addresses on matters connected with sanitary science all betoken the unceasing interest and mental activity he continued to devote to these subjects. The crowning work of his life was his important "Treatise on Disease in India"—a book of great value, containing a comprehensive view of the whole subject of Indian disease. Other and fuller details of all he did, of the books he wrote, the appointments he filled, and the honours he held, will doubtless be given; it is needless, therefore, to dilate on them here, in a mere passing tribute to his worth, by one of many who knew him well and honoured him greatly. His memory will long be cherished, both in his service here and in the East, with affection and respect, and his name will live in their annals as a benefactor of India, and as one of the brightest ornaments of the old Indian Medical Service.

Medical News.

UNIVERSITY OF DURHAM.—At the recent examinations for degrees in Medicine and Surgery the following candidates satisfied the examiners:—

DOCTOR IN MEDICINE, FOR PRACTITIONERS OF FIFTEEN YEARS' STANDING.

Deane, John, M.R.C.S., L.S.A.

ROYAL COLLEGE OF SURGEONS IN IRELAND.—The following gentlemen, having passed the Fourth and Final Examination for the Letters Testimonial under the new scheme, have been admitted Licentiates:—

Samuel Boake, Patrick Thomas Bolger, Thomas N. Frood, William A. Kelly, Samson Hoos Newland, Everard M. Power, Michael Lane Riordan, William John Scott, Thomas H. Strangman, William Joseph Taylor, Percival J. W. Ternan, and John Toppin.

The undermentioned gentlemen, having passed their Final Examination under the old scheme regulation, have been admitted Licentiates of the College:—

James H. Atkin, Thomas Bertram, James Butler, George J. Burke, Eugene Byrne, Patrick Carney, Charles Casey, Norbert Durrant, Richard L. Fitzgerald, Thomas Keough, James Joseph McGrath, Patrick Joseph Power, Edmund B. Russell, and Charles James Rutledge.

BEQUEST.—Mr. John Hunt has left £500 to the Adelaide Hospital, Dublin.

THE Hospital Saturday collection at Nottingham has been fixed for the 29th prox.

IT has been decided to hold on the 18th inst. a Hospital Saturday collection in aid of the Ilkeston Cottage Hospital.

PLANS have been accepted for the proposed General Hospital for Merthyr. The subscriptions and donations already promised amount to £3900.

VACCINATION GRANT.—Mr. R. Istance, Risca district, Newport (Mon.) Union, has received the Government grant for efficient vaccination in his district (seventh time).

SEAMEN'S HOSPITAL SOCIETY.—Sir Andrew Clark, Bart., M.D., will preside at the sixty-seventh annual court of this Society, to be held in February next.

AT a well-attended meeting of the Maidstone branch of the Kent Volunteer Medical Association recently held, it was unanimously resolved that the corps be put into uniform at once.

THE bazaar which was recently held at Manchester in aid of the extension fund of St. Mary's Hospital proved a gratifying success, a net sum of £420 having been paid to the account of the institution.

THE amount of the proceeds of Hospital Saturday, held a few weeks ago in Torquay and the neighbourhood, on behalf of the Torbay Hospital, has been ascertained to be £83.

ONE of the conductors of stores in the commissariat and transport corps has been poisoned by swallowing cyanide of potassium in mistake, as is supposed, for gin. The drug was kept, it seems, for the purpose of cleaning gold lace.

AT a meeting on the 14th inst. of the City Commission of Sewers, instructions were given that the Streets Committee report without delay on the subject of sinking artesian wells in the City with a view to supplying the inhabitants with water.

NEW GENERAL HOSPITAL FOR BOMBAY.—We understand that the Government of Bombay have just sanctioned the expenditure of ten lakhs of rupees for the erection of a new General Hospital for that city on the site of Fort St. George, recently demolished.

Digitized by Google

HOSPITAL SATURDAY AT WOLVERHAMPTON.—Last Saturday the collection for the Wolverhampton and Staffordshire General Hospital realised £1514 11s. 7d.; for the Eye Infirmary, £224.

THE COUNTESS OF DUFFERIN'S FUND.—The receipts in the Bombay Presidency towards this fund amounts now to 64,616 rupees, a sum large enough to indicate that the movement is gaining upon public sympathy and support.

ON the 8th inst., in consequence of the prevalence of rabies in the borough, the watch committee of the Nottingham town council passed regulations for the muzzling of dogs and the destruction of stray dogs and such as were not muzzled.

EIGHTEEN female medical students have been expelled from St. Petersburg for taking part in a meeting which had been forbidden by the police. The female medical school has long been considered a nursery of nihilists, and attempts have been made to close it altogether.

PERTHSHIRE MEDICAL ASSOCIATION.—The monthly meeting of this Association took place in the directors' room in the infirmary on Dec. 3rd. Dr. J. P. Bramwell, Perth, read a paper on "Hyper-arterial Tension," the discussion of which was adjourned till the next meeting.

SMALL-POX IN JAMAICA.—Advices received at Plymouth on the 12th inst. from the West Indies report that small-pox is raging furiously in Jamaica. On the departure of the mail there had been 1000 cases and 100 deaths, and 500 patients were under treatment.

THE PHARMACY ACT.—The Pharmaceutical Society of Great Britain on the 13th inst. obtained a verdict for £10 claimed as penalties from a person who had sold laudanum, and called himself a druggist when he was not registered as such, contrary to the provisions of the Pharmacy Act.

AT the final meeting of the Committee of the Exeter Hospital Saturday Fund on the 11th inst, it was reported that the total amount received was £471. The next collection will be held in the summer of next year, about the time of the celebration of the Queen's Jubilee.

CHOLERA IN CALCUTTA.—We learn from an Indian contemporary that cholera has been epidemic in Calcutta. During the week ending October 30th there were registered 73 deaths, against 63 and 98 in the preceding two weeks. The number, we learn, is higher than the average of the past quinquennium by 49. Recent advices, however, report a diminution of the outbreak.

INTERNATIONAL HEALTH CONGRESS.—This congress, which is to be held in Vienna in September of next year, promises to be successful. The Hereditary Prince of Austria, Crown Prince Rudolphus, has consented to act as the patron of the congress, and the Chief of the Cabinet, Count Traffe, has been chosen as honorary president. The committee, with Hofrath Schneider at its head, is working energetically.

POISONED BY TINNED SALMON.—Three members of a family at Great Bowden, having last week partaken of tinned salmon for supper, symptoms of poisoning were soon afterwards manifested, all being seized with cramp and vomiting. Dr. Lee, of Market Harborough, was summoned, and antidotes were administered, and the sufferers were eventually relieved. A cat, to which a small portion of the salmon was given, showed like symptoms.

DORSET COUNTY LUNATIC ASYLUM.—At a meeting of the Cerne Board of Guardians on the 8th inst., it was unanimously resolved that the authorities having control over the superannuation allowance of the relieving medical superintendent of this asylum be memorialised to recommend that only a minimum pension be granted. The Visiting Committee of the institution have recommended that the allowance should be £600 per annum.

HOSPITALS ASSOCIATION.—On the 15th inst. Sir William Mac Cormac presided at a meeting of this Association, when a paper on "Foundling Hospitals at Home and Abroad" was read by Mr. Samuel Osborn, F.R.C.S., who confined his observations on foreign hospitals almost entirely to those of St. Petersburg and Moscow, which he visited this year, and concluded by giving a detailed account of the institution in Guildford-street. A short discussion followed the reading of the paper.

Medical Appointments.

Intimations for this column must be sent DIRECT *to the Office of* THE LANCET *before 9 o'clock on Thursday Morning at the latest.*

BARKNDT, FRANK H., M.R.C.S., L.R.C.P.Lond., has been appointed Senior House-Surgeon to the Bootle Borough Hospital.

BLUMER, G. ALDER, M.D., L.R.C.P., L.R.C.S.Ed., has been appointed Medical Superintendent to the State Lunatic Asylum, Utica, New York, U.S.A., vice John P. Gray, M.D., LL.D., deceased.

COCKING, W. T., M.B.Lond., has been appointed Obstetric Assistant to University College Hospital.

HOUGHTON, F. E. CAULFEILD, M.R.C.S., L.R.C.P.Ed., has been appointed Surgeon to the Royal Small Arms Factory, Birmingham, vice Popham, resigned.

HUGHES, S., M.B., C.M.Edin., M.R.C.S., L.S.A., late House-Surgeon to the Royal Infirmary, Liverpool, has been appointed Senior House-Surgeon to the Borough Hospital, Birkenhead, vice Richardson, resigned.

KERR, DANIEL O., M.B., C.M.Ed., has been appointed Medical Officer for the Keelby District of the Caistor Union.

KEYWORTH, ARTHUR F., L.K.Q.C.P.I., L.M., has been appointed Medical Officer to the Manchester, Sheffield, and Lincolnshire Railway Mutual Provident Society for the Marple and Hayfield District, vice John Howe, M.R.C.S., L.S.A., deceased.

KINSEY-MORGAN, A., M.R.C.S., L.S.A., has been appointed Medical Officer of Health for Bournemouth.

MANTON, J. L., M.R.C.S., L.R.C.P.Lond., has been appointed Assistant Medical Officer to the Nottingham Friendly Societies' Medical Institution.

MARRIOTT, HYDE, B.Sc.Lond., M.R.C.S., has been appointed Obstetric Assistant to University College Hospital.

MUGFORD, SIDNEY A., M.R.C.S., L.R.C.P.Lond., has been appointed Resident Medical Officer to the Kensington Dispensary, vice Buck, resigned.

RODGERS, J. H., L.R.C.P., L.R.C.S., has been appointed Resident Medical Officer to the Nottingham Friendly Societies' Medical Institution.

WARD, J. O., M.R.C.S., L.S.A., has been appointed Medical Officer to the Fourth District of the Pontefract Union.

WILKINSON, GEORGE T., L.R.C.S.I., L.R.C.P.Ed., has been appointed Assistant Rural Medical Officer for the Scalby District of the Scarborough Union.

Births, Marriages, and Deaths.

BIRTHS.

CHAMBERS.—On the 7th inst., at Amwell-street, E.C., the wife of E. Chambers, M.B., of a daughter.

COCKERILL.—On the 8th inst., at Netley Abbey, Southampton, the wife of John W. Cockerill, Army Medical Staff, of a daughter.

GILBERTSON.—On the 9th inst., at The Limes, Hitchin, the wife of James Henry Gilbertson, L.R.C.P.Lond., M.R.C.S., of a son.

INMAN.—On the 14th inst., at Hackney-road, E., the wife of R. E. Inman, M.R.C.S., of a daughter.

OPIE.—On the 8th inst., at Hartington-villas, Beckenham, Kent, the wife of Edward A. Opie, M.B., of a son.

MARRIAGES.

ANDERSON—MOON.—On the 8th inst., at Edenfield, Cupar, Fifeshire, Alexander M. Anderson, M.D., of Dundee, to Margaret Robertson, eldest daughter of the late William Moon, J.P., and of Mrs. Moon, of Edenfield.

KNOWLES—LONG.—On the 30th ult., at St. James's, Southbroom, Devizes, John Knowles, M.R.C.S., of Maidstone, to Annie Ada, daughter of William Long, of Devizes.

WALKER—MOXON.—On the 14th inst., at St. Giles', Northampton, by the Rev. John Brooke, Vicar of St. Katharine's, assisted by the Rev. R. A. White, Vicar of St. Giles', Norman Hendrie Walker, M.B., of Stalham, Norfolk, to Florence Katharine, eldest daughter of William Moxon, M.R.C.S., of Derngate, Northampton.

DEATHS.

BURY.—On the 9th inst., at his residence, Whetstone, N., George Bury, F.R.C.S.Eng., aged 77.

CATTLIN.—On the 13th ult., at Glendale, Surrey-road, Bournemouth, William Alfred Newman Cattlin, F.R.C.S.E. (Friends will kindly accept this intimation.)

DAVIES.—On the 8th inst., at Borroweop, Lichfield, Robert Alexander Davies, M.D., formerly Medical Superintendent of Burntwood Asylum, co. Stafford.

FERGUS.—On the 8th inst., at Ryton-on-Tyne, Walter Fergus, M.D., M.R.C.S., late Medical Officer at Marlborough College.

GREAVES.—On the 10th inst., at Burton-on-Trent, George Greaves, L.S.A., in his 82nd year.

WATSON.—On the 13th inst., at Woodside-terrace, Glasgow, Eben. Watson, M.D.

N.B.—*A fee of 5s. is charged for the Insertion of Notices of Births, Marriages, and Deaths.*

Notes, Short Comments, & Answers to Correspondents.

It is especially requested that early intelligence of local events having a medical interest, or which it is desirable to bring under the notice of the profession, may be sent direct to this Office.

All communications relating to the editorial business of the journal must be addressed "To the Editor."

Lectures, original articles, and reports should be written on one side only of the paper.

Letters, whether intended for insertion or for private information, must be authenticated by the names and addresses of their writers, not necessarily for publication.

We cannot prescribe or recommend practitioners.

Local papers containing reports or news-paragraphs should be marked.

Letters relating to the publication, sale, and advertising departments of THE LANCET *to be addressed "To the Publisher."*

We cannot undertake to return MSS. not used.

THE ABERDEEN CHAIR OF MATERIA MEDICA.

A CORRESPONDENT—graduate of Aberdeen—is somewhat surprised at receiving a circular from a number of gentlemen asking for the expression of approval of Dr. Bridger's candidature for the chair of Materia Medica in Aberdeen University. The appointment is in the gift of the Crown, and our correspondent evidently thinks it a somewhat bold thing to think of influencing the Crown. But in actual practice the Crown is not so inaccessible nor so independent of information as he seems to think. In the contest for Crown chairs, though we see no objection to any fair pressure of any man's claims, we should deprecate general and promiscuous appeals to the profession.

Mr. Waye (Millom).—There are so many good books on hygiene that selection is difficult and advice invidious. The well-known works of Parkes, Wynter Blyth, Cornelius Fox, Wanklyn, Frankland, Bell, and Hassall would all be useful to our correspondent, and others might be mentioned.

J. R. I. R.—Our correspondent would do well to forward the advertisement to the Royal College of Surgeons, from whom the diploma has been obtained, in virtue of which registration is claimed. There is nothing in the announcement absolutely to show that the surgeon was the author of it.

Mr. F. W. Gibbon, L.R.C.P.Ed., L.S.A.Lond., &c.—We have no knowledge of any proposed establishment of pupilage in the medical curriculum.

Dr. Popow.—We cannot exchange.

FRIENDLY SOCIETIES AND THEIR MEDICAL OFFICERS.

To the Editor of THE LANCET.

SIR,—If you will kindly insert the following lines some of your readers may be able to tell me the rights of this question.

I have been surgeon to a Court of Foresters for more than ten years. A man, who was a member before I became the surgeon, has during the whole of my tenure of the appointment lived out of the district and paid his doctor's contribution to the surgeon of a court elsewhere. Having been ill for some months he now returns to his native place and expects to have my attendance, though he has never paid the usual contribution to me. He would of course during residence in the district pay like the others to the proper court surgeon (myself), but I, in a wholly amicable way, object to be responsible for him, as he is likely to be on the books for some time. Am I responsible? I am, Sir, yours faithfully,

Dec. 14th, 1886. A.

MEDICINAL PRODUCTS OF AFGHANISTAN.

A PAPER was read on the 8th inst. before the Pharmaceutical Society of Great Britain by Dr. Aitchison, C.I.E., F.R.S., late naturalist with the Afghan Delimitation Commission, upon "Some Plants of Afghanistan, and their Medicinal Products." It appears that in Afghanistan umbelliferous plants form the characteristic type of the vegetation, the country in which they flourish consisting of great shingle and conglomerate plains lying between hills and river beds. Only about 1 out of 100 plants bear a flowering stem, and a native will assert that such a flower-bearing plant has nothing to do with the plants that yield asafœtida. The Dorema ammoniacum grows along with the asafœtida plant, and is equally abundant. Dr. Aitchison also describes as a new species (Ferula suaveolens, Aitch. and Helmsley) a plant the scented root of which, under the name of "sambal," is exported through Persia to the coast. Several kinds of manna are also produced, which are largely eaten by the people as a sweetmeat and exported in quantity to Persia and India. Among other plants and plant products met with by Dr. Aitchison were a very handsome species of Rheum, the ripe fruit of which is used by the natives as a purgative, and Orchis latifolia (Linn.), the dried tubes of which are known as "salep."

Dr. R. Neale.—The transliteration of Russian words and names into Roman characters is carried out under numerous systems, and often puzzles highly educated Russians themselves. The system adopted in THE LANCET, when referring to an author who writes in Russian, is much the same as that employed in the catalogue of the British Museum. When, however, reference is made to quotations from Russian authors in French or German publications the orthography employed in the latter is usually retained. Thus, taking the name mentioned by our correspondent, Cheltsoff or Tschelzoff, the Russian letter *che*, which has the sound of the *ch* in *change*, has to be written *tsch* in German, and *tch* in French, as *ch* in those languages would convey erroneous impressions of the sound. Again, the *tse* is equivalent to the German *z*, but not to the English or French *z*. It is the initial letter of the well-known word "Czar," or "Tsar." All this, as well as a great deal more, which would require a long essay to discuss, makes the compilation of an index containing Russian names a very difficult matter, which may be illustrated by the annoyances caused by the numerous ways of spelling and cataloguing the names of Indian towns.

M.R.C.S., L.R.C.P.—Our correspondent may with advantage refer to THE LANCET of April 18th, 1885, p. 735.

CASEINE IN HUMAN MILK.

To the Editor of THE LANCET.

SIR,—In view of the recent discussion upon infant feeding which has been carried on in your columns, may I be allowed to draw attention to the question, How much caseine is contained in human milk? Now, without mentioning earlier writings, I find that Dr. Eustace Smith, Dr. Goodhart, and Dr. Galabin, all of whose text-books are very modern, agree in accepting (or, at any rate, in offering for their readers' acceptance) analyses which represent human milk as containing from 3 to 4 per cent. of caseine. On turning, however, to the chapter on Food in Drs. Meigs and Pepper's work on the Diseases of Children I find that these authors reject as untrustworthy all such analyses, and accept as substantially correct an analysis which gives 1·5 per cent. of caseine. In support of this preference they quote Dr. A. Meigs, who declares that no specimen of human milk which he had examined contained so much as 2 per cent. of caseine. Other analyses giving very similar results are quoted by Dr. Ashby in an article in the *Medical Chronicle* for May in the present year. The question whether the older analyses, which are still current even in the most recently issued text-books, or the newer analyses to which I have here alluded, are correct is one of great practical importance. For, however fully we may believe that clinical experience counts for more than chemistry, we cannot afford to neglect any aid which may be derived from analysis when we set ourselves to produce with the use of cow's milk an imitation of an infant's natural diet. For example, when the question of the appropriate degree of dilution for cow's milk is under consideration, are we to take it as true that human milk contains more than 3 or less than 2 per cent. of caseine? If the more recent analyses are to be received, is it not time that they should be finding their way into English text-books?

I am, Sir, yours truly,

Dec. 7th, 1886. R. J. R.

RELIGIOUS RESTRICTIONS ON A NEW MEDICAL SCHOLARSHIP.

A SUBSCRIPTION amounting to £400 has been raised by the colleagues and admirers of Prof. Karavayeff, the eminent Kieff surgeon, for the purpose of founding a scholarship in his honour for students in the medical faculty. It appears, however, that candidates must be of the "orthodox" faith; so that Lutherans, Dissenters, and Jews are debarred the chance of obtaining either the honour or emolument attaching to the possession of a Karavayeff scholarship.

Mr. W. Curran.—Yes.

ROYAL UNIVERSITY WORK IN IRELAND.

Audi alteram partem is thanked for his letter, though it is too long for insertion. He vindicates the work of the Royal University. He admits it is not perfect, owing to lack of properly equipped laboratories and some defects of method, but thinks it is, on the whole, worthy of encouragement. He praises especially the Arts Examination, which, he says, is as good as Cambridge, requiring a good honest year's work, and alleges that the medical curriculum is improved in many respects—viz., the enforcement of adequate study of lunacy, fever, gynæcology, and ophthalmology, following in this respect the example of all progressive institutions here and on the Continent.

Mr. H. H. Sturge.—There is no publisher's name on the title-page. Our correspondent had better write to the author of the pamphlet.

HOSPITAL APPOINTMENTS.

To the Editor of THE LANCET.

SIR,—I am pleased to find that in your issue of Dec. 11th your powerful voice has been raised in protest against the monopoly at present existing in hospital appointments. Your remarks upon hospital appointments and degrees in surgery apply with even greater force to medical degrees and appointments; though I am afraid that in neither case is your suggested remedy of "addressing the bodies whose licentiates and graduates are injured" practicable, or at all likely to lead to any good result. The Fellows and Members of these same bodies are themselves either directly or indirectly interested in maintaining the *status quo*. The value of their diplomas is distinctly enhanced by the privileges they carry of rendering their happy possessors alone capable of applying for hospital appointments, and as they form the governing power of the bodies in question, it can hardly be expected that they will be very active in the matter. To a certain extent members of the College of Surgeons are in a much better position in this respect than the licentiates of the College of Physicians. In the former case any Member on passing the required examination is admitted to the Fellowship without let or hindrance; in the latter, not only must an examination be passed, but such restrictions are placed upon the would-be members as practically to render the diploma untenable except by those whose means are to a greater or less extent independent of the practice of their profession I need hardly point out in detail how injuriously such a system acts, not only upon the profession itself, but also upon the public at large, closing as it does the door of professional advancement upon a body of highly-trained and experienced members of the profession, who from want of means or some similar cause, not from want of ability, are effectually precluded from competing with their more favoured brethren.

I am, Sir, yours obediently,

Dec. 13th, 1886. REFORM.

SIR WM. MACCORMAC'S CASES OF RUPTURED BLADDER.

In the account of the cases of ruptured bladder under the care of Sir William Mac Cormac which was published in our last issue, on page 1118, paragraph 2, line 4, the date should be 1886, not, as printed, 1885. The two cases were admitted during Sir William's two consecutive "taking in" weeks, rare cases not infrequently occurring in pairs. The second patient, we may add, is perfectly well and shortly about to resume his occupation. Each man was provided with a fitted abdominal support to prevent any yielding along the line of cicatrix and the formation of ventral hernia.

Mr. C. S. Jeaffreson (Newcastle-on-Tyne).—Yes, if not too long.

TRIPLETS.

To the Editor of THE LANCET.

SIR,—The following case seems of some interest.

Mrs. C——, wife of the gardener of this hospital, was delivered of triplets on Sept. 10th last. The children were all males. There were three amniotic sacs and three placentæ, two of which were slightly attached. The first child and also the last presented by the shoulder; the second was a face presentation. The children were small and feeble. One died twenty-four hours after birth; another lived three days; the third lived seven days.—I am, Sir, yours faithfully,

M. JOHNSTON, House-Surgeon.

County Hospital, Lincoln, Nov. 17th, 1886.

RECTAL MEDICATION.

Dr. C. F. Knight (Dublin) calls our attention to the fact that he sent to us in 1878 a communication regarding "Medication per Rectum," in 1880 a second, and in 1883 a third communication on the same subject, but under the above heading. In these articles he advocated the administration of certain therapeutic agents in the form of vapours in particular diseases, as cholera, fevers, phthisis, &c. In 1883 he devised an instrument for such medication, and the method is, he understands, now followed at many of the continental hospitals, and has still more recently been introduced into one or two London hospitals. (See THE LANCET, Aug. 7th, 1886.)

X. Y. Z.—We cannot reply with certainty, but should advise our correspondent to ask the authority in charge of the failure for a direction for payment in full.

EXAMINATIONS AT THE ROYAL COLLEGE OF SURGEONS.

THE following were the questions on Anatomy submitted to the candidates at the first examination for the diploma of Fellow of the College on the 19th ult., when they were required to answer at least three of the four questions between 11 A.M. and 2 P.M.:—

1. Describe the soft palate; and (*a*) mention in their order, from above downwards, the several structures met with in its dissection; (*b*) state the sources of its arterial and sensory nerve-supply; (*c*) give the extrinsic attachments and the motor-nerve of each muscle.
2. Give the origin, course, and distribution of the branches of artery supplying the various parts of the brain and its membranes.
3. Describe the position and shape of the first rib. Give its relations and the muscular and ligamentous attachments to it. How is it developed?
4. Describe fully the levator ani muscle, giving its relations and nerve-supply.

The following were the questions on Physiology, of which it was necessary to answer three of the four between 3 and 6 P.M.:—

1. Name the proteids which occur in the human organism. State their general properties, and the special characteristics by which the different varieties may be distinguished.
2. Explain the effect upon the blood, blood-pressure, and excretions of diminishing the volume of the blood by bleeding, and of increasing it by the transfusion of normal living and of whipped blood.
3. What is meant by the cortical motor centres, and in what region of the brain are they situated? What do you know by experiment or otherwise of their use?
4. Describe the mode of origin and state the destination of the Wolffian and Müllerian ducts.

The following were the questions on Pathology, Therapeutics, and Surgery submitted to the candidates at the second examination for the diploma of Fellow on the 24th ult., when all four questions had to be answered between 1.30 and 5.30 P.M.:—

1. Describe, and contrast clinically and pathologically, the conditions known as (*a*) pulpy degeneration of synovial membrane, (*b*) Charcot's joint-disease, (*c*) chronic rheumatoid arthritis.
2. Give the symptoms, diagnosis, and treatment of tetanus, and discuss the causes and pathology of the disease.
3. Give the pathology, symptoms, and treatment, general and operative, of malignant disease of the rectum.
4. Describe the various forms of gangrene of the lower extremity, and state fully the treatment appropriate to each.

Mr. T. Laffan.—We have no knowledge of any prize for an essay on Diphtheria save that given by the Empress of Germany some three or four years ago.

Messrs. J. & A. Churchill.—Dr. D. Pi y Molist's work on "Don Quixote from a Medical Point of View" could probably be obtained from "La Redaccion de la Independencia Médica, Carmen 34, Barcelona."

PERSISTENT DIARRHŒA.

To the Editor of THE LANCET.

SIR,—May I be permitted to ask for advice through your columns in the treatment of the following case.

I was consulted a few weeks ago by a young lady who looked the picture of health, but who complained that for the last two years she had continually suffered from diarrhœa, accompanied by considerable griping pain in the abdomen. The causes which seem to have produced the diarrhœa were any deviation from the most simple diet and excitement. For two years she had scarcely tasted vegetables, and whenever she had done so she suffered from pain and diarrhœa. She stated that potato, even in small quantities, produced as unpleasant effects as anything. When going to a dance or dinner party she invariably suffered pain, and frequently had to return home on account of diarrhœa coming on. She had been under treatment by another practitioner for some time, and had always kept a mixture containing chlorodyne in the house, a dose of which she had taken whenever she was going out to any entertainment likely to cause the diarrhœa. I commenced treating her with ten grains of bromide of potassium and five minims of tincture of belladonna three times a day, and after a few days increased the dose of bromide to twenty grains. The only apparent effect of this was that she complained of feeling very low-spirited. After about ten days of this treatment I discontinued the bromide and belladonna, and ordered her mineral acids and nux vomica. I also advised her to commence trying to eat very small quantities of well-cooked floury potato with her food, and to have a cold sponge-bath every morning. She now feels very well, except that she has pain and looseness of the bowels after the potato, as before. There is thoroughly good reaction after the cold bath. Her friends tell me that she has never shown any symptoms of hysteria, nor does she appear to be hysterical. Her manner is always quiet and self-possessed. She is naturally very anxious to get rid of the constant discomfort and annoyance, and I am unwilling that she should continue the practice of taking opiates and avoiding vegetables. I shall be very thankful for any suggestions in the treatment of this case.

I am, Sir, yours truly,

Dec. 14th, 1886. A. H.

LIFE ASSURANCE.

WE quite agree with the opinion expressed in a leader of the last issue of the *Policyholder*, that parents could not spend money to greater advantage upon their sons than by insuring their lives when they had reached about fifteen years of age. Such policies would be sure to be kept up, and would prove of great value either as a family provision or to meet business requirements.

Mr. Browning.—The matter is discussed in our current number.

COMMUNICATIONS, LETTERS, &c., have been received from—Sir Dyce Duckworth, London; Mr. Teale, Leeds; Sir J. Paget, London; Mr. O. Pemberton, Birmingham; Mr. W. S. Medical Diary for the ensuing Week.

Monday, December 20.

ROYAL LONDON OPHTHALMIC HOSPITAL, MOORFIELDS.—Operations, 10.30 A.M., and each day at the same hour.
ROYAL WESTMINSTER OPHTHALMIC HOSPITAL.—Operations, 1.30 P.M., and each day at the same hour.
ST. MARK'S HOSPITAL.—Operations, 2 P.M.; Tuesdays, same hour.
CHELSEA HOSPITAL FOR WOMEN.—Operations, 2.30 P.M.; Thursday, 2.30.
HOSPITAL FOR WOMEN, SOHO-SQUARE.—Operations, 2 P.M., and on Thursday at the same hour.
METROPOLITAN FREE HOSPITAL.—Operations, 2 P.M.
ROYAL ORTHOPÆDIC HOSPITAL.—Operations, 2 P.M.
CENTRAL LONDON OPHTHALMIC HOSPITALS.—Operations, 2 P.M., and each day in the week at the same hour.
MEDICAL SOCIETY OF LONDON.—8.30 P.M. Clinical Evening. Dr. Ord: Hypertrophic Cervical Pachymeningitis.—Dr. Orwin: (1) Lupus of Larynx; (2) Hereditary Specific Disease of the Tongue.—Mr. Marmaduke Sheild: Ulcer of Face.—Mr. Bull: Enlargement of Thigh in a Boy.—Mr. Noble Smith: Club-foot. And other cases.

Tuesday, December 21.

GUY'S HOSPITAL.—Operations, 1.30 P.M., and on Friday at the same hour. Ophthalmic Operations on Mondays at 1.30 and Thursdays at 2 P.M.
ST. THOMAS'S HOSPITAL.—Ophthalmic Operations, 4 P.M.; Friday, 2 P.M.
CANCER HOSPITAL, BROMPTON.—Operations, 2.30 P.M.; Saturday, 2.30 P.M.
WESTMINSTER HOSPITAL.—Operations, 2 P.M.
WEST LONDON HOSPITAL.—Operations, 2.30 P.M.
PATHOLOGICAL SOCIETY OF LONDON.—8.30 P.M. Dr. Hale White: Ulceration and Endocarditis of the Right Side of Heart.—Dr. Pasteur: Syphiloma of Heart.—Dr. A. Money: Rare Aneurysm of Undefended Space.—Dr. Handford: Fatty Tumour of Heart.—Dr. Hadden: Fatal cases of Alcoholic Paralysis.—Dr. Barlow: Ulcers of Stomach in case of Tuberculosis.—Mr. Bruce Clarke: Epithelioma of Bladder.—Mr. Swinford Edwards: Tumours of Testis and of Spermatic Cord. Card Specimens by Mr. S. Paget, Dr. Handford, and Mr. Shattock.

Wednesday, December 22.

NATIONAL ORTHOPÆDIC HOSPITAL.—Operations, 10 A.M.
MIDDLESEX HOSPITAL.—Operations, 1 P.M.

ABSTRACT OF THE

Brown Lectures.

Delivered at the University of London,

BY VICTOR HORSLEY, F.R.C.S., F.R.S.

EPILEPSY.

LECTURE III.

MR. VICTOR HORSLEY said that he intended to give in detail an account of recent experimental research into the nature and pathology of epilepsy. The first of the three lectures was devoted to classification, and he proposed only to deal with epilepsy so far as it could be studied experimentally, though the results of experimental science had been somewhat ridiculed by clinical physicians. Experimental results were, however, infinitely more exact than those of clinical observation. A passage from Dr. Gowers' work on Epilepsy and other Chronic Convulsive Disorders, quoting Dr. Russell Reynolds, was read to show that the experimental work had been dragged into a false position. The lecturer next asked the question, "What do we mean by epilepsy?" and proceeded to give the classifications in vogue. Dr. Hughlings Jackson distinguished epilepsia gravior, epilepsy from discharges in the bulb and pons, and epileptiform seizures (Jacksonian Epilepsy). Dr. Russell Reynolds divided epilepsia gravior into those cases with loss and those without loss of consciousness, and also divided epilepsia mitior into those with and those without spasm. Dr. Gowers and Dr. Ross described as functional epilepsia gravior and mitior, and as organic epileptiform seizures. It was customary to consider hystero-epilepsy, epileptiform seizures, laryngismus stridulus, and eclampsia as altogether apart from epilepsy. Mr. Horsley thought that the omission to consider these diseases or conditions under epilepsy was unwarrantable. Experimental research showed that epilepsy could originate from discharges in the motor cortex of the brain and from discharges in the bulbo-spinal centres. For the present the hypothesis of Nothnagel, that there existed a special convulsive centre in the bulb and pons, as well as the views of others as to the convulsive centre of the bulb alone, must be set aside. Ferrier believes that movements may be evoked by stimulation of the corpus striatum, but Mr. Horsley had been unable to corroborate this. Nothnagel, in Ziemssen's Cyclopædia, in one and the same sentence, allows that the same mechanism in the brain may produce both epileptiform seizures and epileptic convulsions. This confusion of terminology must always remain until an exact division of symptoms is arrived at, and this coupled with an exact anatomical knowledge of the locality where the discharge begins and its mode of spread. The two essentials of epilepsy, according to Dr. Russell Reynolds, were diminution of intelligence and muscular spasm. An anatomical classification of epilepsy demands that we should know the locality of origin of disturbance, the locality of source of spasm, and the locality of the whole disturbance, which may or may not be the whole of the central nervous system. The disturbance might begin in any part of the encephalon, and, if in the perceptive centres, would readily explain the affection of intelligence. The next possible anatomical means of classification was in determining the locality of the source of spasm. Experimental stimulation of the motor cerebral cortex gave rise to definite movements, for in this region the representation of movement was, so far as is known, the most localised. Epilepsy induced from the cortex of the brain was characterised by tonic spasm followed by clonic spasm, as in epilepsia gravior. Epilepsy excited from bulbo-spinal centres was generally simply tonic, but might be clonic; the sequence of clonic on tonic was wanting. Tetanus and ankle clonus were of bulbo-spinal source, and possibly laryngismus also. Hystero-epilepsy was probably a cortical disease, as epileptiform seizures dependent on organic lesions undoubtedly were. Possibly eclampsia, epilepsia mitior, and laryngismus stridulus were of cortical origin. Mr. Horsley and Dr. Semon have discovered cortical centres for the adductor action of the vocal cords. It must remain doubtful whether tumours of the pons cause epilepsy by discharging a local mechanism (Nothnagel). The spasms in hystero-epilepsy at the onset of the attack were of the tonic followed by the clonic character, as graphic records showed. This fact, together with the remarkable coördinated movements in the later stage, were sufficient to prove hystero-epilepsy to be, at least primarily, a cortical affection.

LECTURE IV.

The second lecture on epilepsy was devoted to the question of the existence of special convulsive centres either in the pons Varolii or medulla oblongata. Mr. Horsley gave a detailed account of the various investigations, and showed that neither taken singly nor collectively could the results of these experiments be accepted as proving the existence of special convulsive centres. Such a hypothesis as that of Nothnagel and others was entirely unnecessary, for all the ascertained facts could be perfectly and harmoniously interpreted without it. Mr. Horsley believes that all the convulsive, tonic and clonic, phenomena may originate from the ordinary bulbo-spinal centres such as exist for carrying out normal mechanisms. Tonic or clonic spasm, then, may be produced by any motor nerve centre, but the combination and sequence of tonic-clonic could originate only from the cerebral motor cortex. It was an interesting and important but unsolved problem whether the clonic spasm of cortical epilepsy was the effect of cortical or bulbo-spinal discharges. Conceivably the cortical centre may discharge the energy pent up in the bulbo-spinal centre, but the violent rush of energy from the cortex might be simply passed along by the bulbo-spinal centre, which thus would act as a mere conductor. The tonic spasm resulting from cortical stimulation was a tetanus compounded of a series of muscular contractions, which, though fused in the tetanus, could yet be seen as waves on the continued curve, which had a definite rate of twelve to thirteen per second. The rate of discharge from the spinal motor centres is about eight to ten per second.[1] What was really wanted was a knowledge of the rate of nerve impulses passing along the pyramidal tracts. This might be ascertained by the use of Lippmann's electrometer and observing the variations of the electric potential. This was a point for future investigation. It has been proved experimentally that the only seats of motor nerve discharge in monkeys and dogs were the cortical and bulbo-spinal. Attention must next be turned to rodents, and in these animals, with but very imperfectly evolved nervous systems, the representation of movements in the cortex of the brain appeared to be of a very imperfect kind. In rodents the most careful work had been done by Franck and Pitres. They could not obtain the sequence of tonic-clonic from exciting the cortex of the brain of rabbits and guinea-pigs. Mr. Horsley had confirmed their observations; the spasm resulting from electrical excitation was sometimes tonic and sometimes clonic—i.e., of a mixed type. But the subject requires further investigation. The differences between these lower and the other higher mammalia might be explained as the result of imperfect evolution of centres, and, above all, imperfect differentiation between the cortical and bulbo-spinal systems. The problem was as follows: Given a convulsion in the rabbit or guinea-pig composed of tonic and clonic spasms, what is the locality of the motor disturbance?

Nothnagel's experiments were made by—1. Injections of chromic acid into the substance of the brain. These were so inexact as to need no further discussion. 2. Puncture with a needle. Punctures were made—(*a*) about the posterior end of the only sulcus that exists in the hemisphere of the rabbit; (*b*) about the bulb, in a region between the acoustic nucleus on the outside, the eminentia teres on the inside, and the calamus behind. In most cases the needle was driven through the floor of the ventricle nearly to the bone. Mr. Horsley showed that both of these punctures necessarily damaged the motor tracts going from the cortex down to the cord. When the puncture was made in the hemisphere, there was opisthotonos, contraction of pupil, tonic spasm alternating with violent clonic spasm, and ending in tetanus; the jaw and face showed tonic spasm. When the puncture was made through the floor of the fourth ventricle, the face and jaw

[1] THE LANCET, vol. ii. 1886, p. 359.

Digitized by Google

were not affected, and the pupil was dilated, but the other phenomena remained the same. After the convulsions had been induced by this puncture it was found that the attacks recurred spontaneously. Now, in these experiments a lesion of the motor tracts was produced, and there was no definite series of muscular movements. The work of Kussmaul and Tenner, of Brown-Séquard, of Prevost of Geneva, Landois, Hermann, and Escher, constituted a series of experimental production of convulsions by vascular disturbance. Kussmaul and Tenner caused anæmia of the brain by ligature of both arteries going to the brain or by bleeding. The series of phenomena they observed were given in detail, and it was noted that considerable confusion existed as to the sequence and combination of tonic and clonic spasm. By compressing the aorta of rabbits, as had been done by Brown-Séquard and Prevost, muscular twitching and clonic spasms in the legs were evoked. These could not be explained as the result of anæmia of the legs, for ligature of the arteries going to them caused no such clonic movements. There was no doubt that they were due to anæmia of the lower end of the spinal cord, which received its chief blood-supply from the abdominal aorta by branches through the intervertebral foramina.

The next series of observations were those in which the convulsions were elicited by reflex irritation. Brown-Séquard had two methods of doing this—(1) hemisection of the cord, and especially of the posterior columns; (2) production of injury to the sciatic nerve. Westphal rendered guinea-pigs "epileptic" also by percussion of the frontal region, which doubtless caused minute hæmorrhages in the fourth ventricle as the effect of a kind of *contrecoup*. It was important to know, as Mr. Horsley had definitely determined, that there was no need in Brown-Séquard's methods that the wounds should suppurate, or even inflame much; even if primary union were obtained by antiseptic methods, the nervous effects followed equally well. In this so-called "epilepsy" of guinea-pigs it was most important to observe that the convulsive movements did not commence immediately after the operation. In France there was an "incubation period" of two weeks; in England and the United States a longer period of six weeks. Was it too much to suppose that there were racial differences even in animals, bearing in mind the greater frequency of hystero-epilepsy with the French? A fully developed fit was not the first thing to be observed; there was always a gradual development. The fits were evoked by touching the epileptogenous zone, which in the guinea-pig was on the same side of the head as the hemisection of the cord, or injury to the sciatic nerve. At first nothing more than a slight tonic spasm, causing the head to deviate to the same side as the lesion, would be observed. Later a complete fit would occur, and the phenomena were, in order, (1) slight period of latency after stroking the region of the angle of the jaw and behind the ear; (2) lateral tonic spasm as above, followed by complete pleurosthotonos, and spreading movements of the toes from tonic spasm in the limbs; (3) loss of consciousness, as inferred by the insensitivity of the conjunctiva, and the animal's falling over on its back. (4) then rapid clonic spasm of the whole four limbs, with genuine opisthotonos and opening of the mouth, so that the head and trunk was in a tonic and the belly and limbs in a clonic state. There seemed to be little doubt that the induced epilepsy was a pure neurosis. The incubation period and the slow development of the disease were very important features. The matter was still under investigation. Mr. Horsley considered that there was nothing in the results of the experimental researches that necessitated the hypothesis of a special coördinating convulsive centre. Coördination was effected by the functional and structural union of all bulbo-spinal centres. The so-called respiratory centres, probably brought into play the lower centres, innervating the respiratory muscles. In Landois', Hermann's, and Escher's experiments of ligaturing the veins returning blood from the head, the venous stagnation and plethora thus produced were followed by coma and convulsions; the fact was interesting, but too much stress could not be laid on it as proving any theory, vaso-motor or other, of epilepsy.

LECTURE V.

This lecture was occupied with the discussion of the convulsions evoked by discharge from the motor part of the cortex cerebri. It was possible that the part of the cortex producing the convulsion might be sensory (Ferrier) as well as motor. Ferrier had evoked convulsions by stimulating the temporo-sphenoidal lobe. The convulsion in which tonic spasm followed by clonic spasm was the essential feature was clearly shown by experiment to be dependent on the cortex cerebri. Stimulation of the fibres of the corona radiata, after cutting away the cortex, did not produce the typical series of events—tonic, clonic. Mr. Horsley had observed that there was a great difference between different monkeys and different parts of the motor cortex in respect of the facility with which convulsions could be evoked. The conditions of the cerebrum under which epileptogenous states are excitable were very numerous. Individual peculiarity was an important factor; so also were age, illness, and drugs, like absinthe and alcohol. If a monkey were lowered in health as the result of diarrhœa, a convulsion was more easily elicited than in the same animal when well. Old people and animals were less liable to cortical epilepsy, and, generally, very young animals also. Absinthe and alcohol injected into the venous circulation might spontaneously originate convulsions of cortical type. Coarse disease, such as septic meningitis, traumatisms, and new growths, could also excite true cortical convulsions, and of course electricity, employed experimentally. The general characteristics of the convulsion were the presence of a period of latency, then tonic spasm, then clonic spasm, arrest of respiration, with cyanosis and salivation, though the precise relationship of these phenomena to one another could not be proved as yet. There was also an effect on the heart. Paralysis and mania followed not only in man but in the lower animals.

Dr. Hughlings Jackson's views of the representation of movements in the hemispheres were sketched, and the chief point in them, so far as the present subject went, was that each hemisphere represented both sides of the body. The representation of the opposite side was most marked, but still there was a degree of representation of the same side of the body in the same cerebral hemisphere. According to these theoretical views of Dr. Hughlings Jackson, it would be possible to evoke convulsions of the whole of the body by stimulating one motor centre. The upper arm centre, for example, if stimulated, would produce movements in the opposite shoulder, but theoretically it could cause spasm down the opposite arm, down the opposite leg, the trunk, head, neck, and face, and then invade the muscles of the same side of the body as the stimulated centre, and in the same order above mentioned. In such a fashion is this representation imagined that the left lower part of the face would be represented, but the least so in the left upper arm centre. However probable these views might be theoretically, Mr. Horsley said that they obtained no proof, either clinically or experimentally. Clinical and experimental evidence simply showed that one half of the body was represented in the opposite hemisphere, with but few exceptions. Experiments, moreover, did not support Broadbent's hypothesis.[2] It was important to determine whether a passage of nervous energy or discharge could take place across from one hemisphere to another by way of the corpus callosum. Mr. Horsley quoted an observation made on a boy who was the victim of tubercular meningitis. The right arm was paralysed and rigid; on flexing it forcibly, it was found that the left arm became adducted. There was no doubt of the causal relationship between the two phenomena. The interval that elapsed between the cause in the right arm and the contraction in the left was always a second, and sometimes longer. This time was far longer than would be necessary for the passage of energy from one anterior spinal horn to the other. Mr. Horsley suggested that the nerve impulse from forcible flexion of the rigid arm passed upwards to the left hemisphere, and then discharged the energy in the right hemisphere by way of the corpus callosum. At the necropsy a conglomeration of tubercles was found in the left motor cortex, which explained the palsy and rigidity. The diagnosis of the lesion was made during life. Tracings of the convulsions in cortical epilepsy proved also that there must be a passage of nervous energy though the corpus callosum. It has been shown that the sequence of tonic-clonic spasm can only occur when the cortex is discharging. If the convulsion be bilateral when the cause is unilateral, and if the bilateral convulsion have the cortical character, it is clear in the light of experimental evidence

[2] See article on Substitutions in THE LANCET, vol. ii. 1884, p. 3.

Digitized by Google

that the two hemispheres must have been discharging. The march of the spasm in cortical epilepsy is explained on the facts of experimentation as discovered by Ferrier, Schäfer, and Horsley. If the spasm begins in the right face, it passes to the arm, then to the leg, and then to the trunk of the same side; the convulsions, as a rule, begin later in the left limbs. The experimental evidence on this matter was detailed. Albertoni operated on dogs and ablated one motor area, and some days later exposed the opposite hemisphere, and on excitation he obtained generalised bilateral fits. This would seem to be contrary to the above views, but Mr. Horsley said that it was doubtful whether all the motor areas on one side had been removed. Franck and Pitres had operated on one cat by dividing the corpus callosum, and found that a cortical convulsion (i.e., tonic followed by clonic) could be obtained in all four limbs. It may be that these adverse facts can be explained on the knowledge that in the carnivora and some human beings the course taken by the fibres of the pyramidal tracts would seem to be bilateral in the cord for each hemisphere. So that anatomically there is some ground for expecting some bilateral effect when one hemisphere discharged. What, however, is the clinical and experimental fact? Mr. Horsley next gave in detail certain experimental and clinical evidence which seemed to show conclusively that, as a rule, each hemisphere convulsed its own (the opposite) side of the body. In hemiplegia, if the motor cortex was completely cut off the limbs remained permanently paralysed. Then, again, in unilateral fits there was no necessary spread to the opposite side of the body. In one monkey with unilateral cortical fits induced by electricity the muscles of the back and belly were convulsed only on the one side, showing that even such muscles as are supposed to act bilaterally and to be closely united spinally, did not do so in cortical fits—a strong argument against Broadbent's explanation of the escape of certain groups of muscles in ordinary hemiplegia. A case of Obeke's was also narrated as bearing on the point.[3] It was a case of con-

[3] Berlin. Klin. Wochen., 1880, p. 534, No. 37.

genital epilepsy and mental enfeeblement; the epilepsy was bilateral. Late in life a hæmorrhage occurred into the right internal capsule, destroying it and producing complete left hemiplegia and hemianæsthesia. After this attack, whenever the epilepsy appeared, it did not affect the left side of the body. The conclusion to be arrived at was that the bilateral representation, if it exists, is very imperfect.

Mr. Horsley next gave an account of experiments made by him which seemed to prove the same conclusion. In the first group of experiments the corpus callosum was completely divided. In the first dog the division was found to be complete, and a slight injury had been done to the right internal capsule. Stimulation of either cortex caused tonic spasm only, no "cortical" epilepsy, in the opposite side of the body. In the second dog there was, besides division of the corpus callosum, slight injury to its anterior end; in this case there was epilepsy, but only in the side of the body opposite to the hemisphere stimulated. In the third dog the division of the corpus callosum was perfect, save at the lower border of the rostrum. Stimulation of one cortex produced tonic spasm in the proximal segments of all four limbs, but genuine epilepsy only in the opposite limbs. In a monkey, the corpus callosum, anterior commissure, median commissure, and fornix were all completely divided, with the result that cortical stimulation caused epilepsy only in the opposite limbs. In the second group of experiments the motor centres were excised and the electrical stimulation practised on both hemispheres. In a monkey, the right motor centres were freely excised, with consequent left hemiplegia. Excitation of either hemisphere produced generally epilepsy, provided a very strong current were used. When the right hemisphere was alone stimulated by a moderate current, the convulsions were very marked, but only in the *right* limbs; there were practically no convulsions in the *left* limbs. It should be said that the whole of the right motor region was not entirely removed. When the left hemisphere was stimulated, the convulsions were very well marked in the right limbs, but absent from the left. Munk and Luciani had worked at the same subject. In the third class of experiments means were taken to depress the activity of the cortex of the brain on one side. A monkey was trephined on the right side and the wound allowed to become septic, with consequent meningitis; and at the end of two days the left limbs were found to be paralysed, but not completely. Excitation of the right hemisphere produced generalised epilepsy, but almost absolutely right-sided. In this case the passage of energy through the corpus callosum must have taken place, but the stimulated right cortex was unable to respond in the form of cortical epilepsy of the left limbs owing to its depressed state, it being the seat of septic meningitis with venous stagnation and consequent innutrition. In the fourth class of experiments an artificial tumour was produced in the subcortical region, and therefore damaging the fibres of the corona radiata. An injection was made of thin plaster-of-Paris by means of a syringe plunged through a part of the motor cortex. This was done in a monkey on the left side of the brain. Excitation of this left hemisphere caused no effect on the right limbs of the body, but evoked powerful epilepsy, which affected both eyelids and eyes, but only the left side of the face, trunk, and left limbs. Here it would seem that the artificial tumour in the left corona radiata had cut off the path leading from the left cortex to the right half of the body, but had not destroyed the fibres that passed from the left to the right motor cortex. The mere presence of the tumour did not appear to excite any epileptic effect. It would appear, therefore, that something other than mechanical pressure is necessary to put the nerve cells in that condition in which they discharge energy convulsively. The conclusions all round, therefore, were very emphatic, to the effect that convulsions due to cortical discharge are evoked in various groups of muscles by nerve energy proceeding from that centre in each hemisphere which is in relation to each group of muscles, and that in generalised epileptic convulsions both cerebral hemispheres are involved.

LITHOLAPAXY IN MALE CHILDREN AND MALE ADULTS.

BY SURGEON-MAJOR D. F. KEEGAN, M.D. DUB.,
RESIDENCY SURGEON, INDORE, CENTRAL INDIA.

(*Concluded from page 1170.*)

AT the close of the year 1883 a young man, aged twenty, was admitted into the Indore Hospital with stone in the bladder. The stone, which consisted of uric acid and weighed 1140 grains, was disposed of by litholapaxy, and he left the hospital perfectly well twenty days after the operation. Indeed, he might have returned to his home very much sooner, but it was considered wise to keep him for some days under observation in hospital. The notes of this case I have left behind me in India, and am not in a position at present to state how long the operation lasted, or the size of the lithotrite or evacuating catheters employed.

S. M——, aged sixty-seven, an inhabitant of Indore, was admitted into hospital on May 18th, 1884, suffering from symptoms of stone, which had existed for fifteen years. His face bore the traces of great suffering. The pain on passing urine was so great that sometimes he used to strike his forehead against the ground or against the wall of his room in paroxysms of despair. The urine was alkaline in reaction, and its specific gravity 1015. The same day I passed a No. 15 fenestrated lithotrite into the bladder and readily seized a very large stone. The bladder was healthy and roomy, and the urethra very capacious. The stone, however, I found too large to permit of its being cracked across with the lithotrite, and I had not a larger one in my possession. To have cut an old man with a large stone would almost certainly have killed him, and I therefore determined to chip away at the stone until I could so reduce it as to get the lithotrite to lock on it. I was obliged to spend a very long time in chipping away at the outer shell of the stone, and when nearly half an hour had elapsed I had the satisfaction of finding that I was able to lock the lithotrite. Once the stone was cracked across, the operation presented no remarkable features except its great tediousness. At the end of two hours I had only extracted half the stone, and I almost began to despair of success. But my old patient's pulse improved, his breathing was perfectly regular, and he required but little chloroform to keep him in a condition of perfect anæsthesia, and so I was determined to extract the entire stone at one sitting if possible. I was obliged to introduce the lithotrite fourteen different times, and applied the aspirator an equal number

Digitized by Google

of times. The evacuating catheter which I employed was a No. 29 (French scale). At the end of the fourth hour I had nearly extracted the entire stone, and the last quarter of an hour of the operation was spent in sounding and in disposing of the last few fragments. The stone consisted of urate of lime, and when damp weighed 1600 grs. I have weighed it recently, and after two hot weathers in India its weight is 1470 grs.—May 18th: Evening temperature 102·4°; pulse 96.—19th: Feels slight pain over bladder region: urine somewhat red; not much pain in micturition; has almost recovered from the effects of chloroform.—21st: Patient feels quite well; walks about his room; is anxious to go home.—23rd: A small lithotrite having been introduced into the bladder, a small fragment of stone was detected lying close to its neck, and was removed between the blades of the lithotrite.—24th: Urine perfectly clear: no pain in micturition. Allowed to return home.

The above case is a good example of the results which can be achieved by Bigelow's operation. Compare the history of this case after the operation of litholapaxy with what it would have been had I extracted the stone by supra-pubic cystotomy, and the superiority of Bigelow's method over other systems of treatment becomes very striking. This man was in the enjoyment of excellent health when I left India in March last, and was perfectly free from all bladder trouble. I may here mention that his testicles have never descended into the scrotum, or even into the inguinal canal. He affirms that he has had two children, and suffered once from syphilis and once from gonorrhœa, proving that a man may be the subject of retained abdominal testicles and still possess undiminished virile power.

M. S——, aged thirty years, admitted into the Indore Hospital on Feb. 1st, 1885, with symptoms of stone in the bladder. A No. 15 fenestrated lithotrite having been passed into the bladder, a large stone was easily seized and crushed. The lithotrite was introduced into the bladder eight times, and the débris evacuated through a No. 29 catheter (French scale). The operation lasted one hour and thirty-seven minutes, and the débris of the stone, which consisted of mixed uric acid and urate of ammonia, weighed 770 grs. The patient left the hospital quite well on the twelfth day succeeding the operation.

L——, aged thirty years, admitted into the Indore Hospital on May 20th, 1885, with stone symptoms, which had existed for twelve or fifteen years. A No. 15 fenestrated lithotrite being passed into the bladder, a stone was readily seized. The stone I found was a very hard one, and tested the strength of the lithotrite employed, one of Weiss and Son's make. The male blade seemed to me to sink into the stone. The lithotrite was introduced eleven different times, and the evacuating catheters employed were No. 16 English and No. 25 French scale. The operation lasted two hours and four minutes, and the stone extracted weighed 550 grains. It consisted of oxalate of lime, was quite black in colour, and was the hardest stone I have yet crushed. The man made an excellent recovery, and left the hospital quite well ten days after the operation. The lithotrite on this occasion did its work splendidly. The amount of pressure I was obliged to exert in screwing up the lithotrite was represented by the whole strength of my wrist and forearm. In attacking stones of this description, I screw up the lithotrite as tightly as I think I can do with safety, and then wait for some seconds before endeavouring to give the handle of the screw an extra half turn, and I generally find that in the interim the stone gives way with a snap under the continuous pressure exerted by the blades of the lithotrite. The screw power of the lithotrite should be worked judiciously and carefully when one meets with very hard stones. The inexperienced litholapaxist who, so to speak, "rushes" a hard mulberry calculus is not acting fairly either towards his patient or the surgical instrument maker. The blades of the best made lithotrite are liable to break if the whole power of the screw is rapidly brought into play against a very hard and tough stone.

M——, a man aged forty, was admitted into the Indore Hospital on July 3rd, 1885, suffering from stone symptoms, which had existed for some years. On introducing a No. 15 fenestrated lithotrite into the bladder, a large stone was readily seized and crushed. The stone was a very hard one. The lithotrite was introduced on six different occasions, and the débris extracted by a No. 16 evacuating catheter. The operation lasted eighty-eight minutes, and the stone, which consisted principally of oxalate of lime with some mixture of lithic acid, weighed 1100 grs.—July 4th: Urine clear; has some pain in passing urine.—5th: Pain much less; feels quite well. Sir Henry Thompson's sound being passed into the bladder, no particle of stone could be detected.—6th: Went home quite well.

M. S——, aged twenty-five years, admitted into the Indore Hospital on July 11th, 1885, with symptoms of stone, which had existed for some years. Next day, being placed under chloroform, a stone, consisting of lithic acid and oxalate of lime and weighing 787 grs., was evacuated from the bladder in seventy-five minutes. The lithotrites employed were Nos. 11 and 15, and the evacuating catheter used was a No. 16 (English scale). The patient made an excellent recovery, and left the hospital quite well on the seventh day succeeding the operation.

S. B——, aged thirty years, was admitted into the Indore Hospital on March 12th, 1886, suffering from stone in the bladder. This man's stone had been diagnosed by a native practitioner in the city of Iaora, who sent him to me for treatment. He had suffered for seven years from stone symptoms, and several hakims had treated him for gonorrhœa. He was most anxious to be relieved from his sufferings as speedily as possible, and next day, being placed under chloroform, I passed into his bladder a No. 15 fenestrated lithotrite, and at once seized a very large stone. I at once perceived that the stone was far too large for such a lithotrite. I then introduced with great facility a No. 32 fenestrated lithotrite (French scale), which Messrs. Weiss and Son had sent me out in September, 1885. My patient had a wonderfully capacious urethra, for it was not found necessary to slit up the meatus before introducing this powerful lithotrite. The bladder I found also very roomy, and not disposed to spasmodic contraction. I seized the stone, but could not lock the lithotrite. I therefore began to chip away at the stone, and gradually wore away some of its shell. After working in this fashion for about five minutes, I withdrew the lithotrite from the bladder, introduced a No. 31 evacuating catheter (French scale), and then applied the aspirator. I then brought away a quantity of white fine débris, proving at any rate that the covering of the stone was phosphatic. I therefore made up my mind to crush the stone at one sitting if possible, for I had many of the conditions necessary to success on my side. I had a powerful and trusty lithotrite and a large evacuating catheter to hand; a very capacious urethra and a roomy bladder to work in; my patient was young; the stone to be attacked was not, I believed, abnormally hard; and last, though not least, I had gained a considerable experience in performing litholapaxy. I therefore reintroduced the large lithotrite, and started afresh. After further chipping away at the stone I eventually wore it down, and soon I was able to lock the lithorite on it, and crushed it at the rim. Once having crushed it, I felt confident of ultimate success, and not to enter into weary details, I may at once state that after three hours and a half of hard work I had extracted a stone, principally phosphatic, weighing over six ounces avoirdupois. The last half hour of the operation was passed in disposing of the nucleus, which I found composed of oxalate of lime, and in searching for pieces of débris lying in the trigone of the bladder. My patient took the chloroform well, and I had no anxiety on this score during the operation. Next day, I found the stone, when dried, to weigh exactly 2804 grs. The nucleus, which I easily picked out from the mass of débris, weighed 100 grs. During the operation I introduced the lithotrite thirteen different times into the bladder, and the evacuating catheter an equal number of times. I exhibited the débris of this stone at the meeting of the British Medical Association held at Brighton in August last. It is, as far as I know, the largest stone which has ever been removed from the bladder by Bigelow's method. To perform an operation of this kind with success is a great strain on the resources of the surgeon who attempts it. He must be ever gentle in his movements, and at the same time persevering and courageous in attack. He must have implicit confidence in the lithotrite which he employs, and he must of all things be patient and in no hurry to finish the operation. Portions of this stone I found extremely hard. On one or two occasions I screwed up the lithotrite with almost the whole strength of my wrist and kept up the pressure. I patiently awaited the result, and soon I had the satisfaction of hearing the snap of the stone as it gave way under the continued pressure of the blades of the lithotrite. I would not, however, recommend an inexperienced litholapaxist to attack such a stone. Had this stone been composed of hard lithic acid or oxalate

Digitized by Google

of lime, the correct operation for its removal would, I think, have been supra-pubic cystotomy, but being what it was the course which I pursued was doubtless the correct one. The subsequent history of this case was the following:—March 13th (evening): Had completely recovered from the effects of chloroform at 3.45 P.M. One drop of nitro-glycerine was then given. Passed urine at 4.30 and again at 6.20 P.M.; slight pain over bladder and urethra; feels better than before the operation. Evening temperature 102·6°; pulse 96.—14th: Morning temperature 100·2°; pulse 90; slept well; some pain on pressure over bladder and urethra; pain on micturition less than yesterday; colour of urine brown; large deposit of phosphates in urine on cooling; feels much better. Evening temperature 102·2°.—15th: Morning temperature 99·2°; slept well; feels much better. Evening temperature 99·0°.—16th: Pain over bladder and urethra less; passed some small bits of stone along with the urine during the night; sat out in the verandah of the hospital for about half an hour to-day.—17th: Passed some more small portions of stone. Morning temperature 98·4°; evening temperature 99°.—18th: Passed some very fine phosphatic sand; sits out in the verandah daily.—20th: Patient's general health improving; pain in urethra and over bladder on pressure much less.—21st: Passes urine freely and without much pain; has some slight purulent discharge from urethra; has some pain over descending colon.—22nd: Some pain in the left testicle. Placed under chloroform, and bladder washed out with saturated solution of boracic acid. No particle of stone could be detected by Sir H. Thompson's sound. No click on using aspirator.—23rd: Had four motions during the night; pain in left testicle much less. Morning temperature 98·4°; pulse 96; sits out in verandah.—25th; Has some pain in region of left kidney; morphia injected.—26th: Pain disappeared from region of left kidney; looks quite cheerful; urine still continues to deposit phosphates on cooling.—27th: Slight pain in passing urine; walks about the hospital grounds. Evening temperature 98·4°.—28th: No urinary symptoms of any importance, except very slight pain in passing urine; urine, however, continues to deposit phosphates; general health much improved.

Remarks.—I left Indore on March 28th on furlough. A letter lately received from India tells me that this patient left Indore for his home the day on which I started for Bombay. When I showed the débris of this man's stone at Brighton in August last, I was under the impression that he had remained in hospital until April 3rd.

That litholapaxy is capable of successfully dealing with stones of considerable size occurring in females, the following case will go to prove.

B——, an old woman aged eighty, was admitted into the Indore Hospital on March 17th, 1886, with stone symptoms which had existed for two years. She had lost control over the bladder for more than one year, and had suffered much from irritability of the same. A stone being found, she was next day placed under chloroform and a uric acid calculus weighing 395 grains removed from the bladder in sixty-seven minutes. The evacuating catheter used was No. 16 (English scale), and the lithotrite employed was No. 14 (English scale). The operation presented no features of difficulty, and the evacuating catheter and lithotrite passed with the greatest ease. When working the aspirator an assistant's finger pressed the meatus of the urethra against the catheter, and thus very little water leaked out between the wall of the urethra and the catheter.—March 19th: Colour of urine pale; it still dribbles away.—20th: Pulse 84; colour of urine brown; no pain over bladder; feels much better.—21st: Has some pain after micturition; passes urine involuntarily only when she moves about in bed; no pain over bladder.—22nd: Is able to retain her urine for two hours at a time; feels very weak.—23rd: Is now able to retain her urine for three hours at a time; she passed some this morning at 6 A.M., at 8 A.M., and again at 11 A.M.—24th: Feels much better; is fast regaining complete power over the bladder.—25th: Allowed to go home to-day, feeling quite well.

Remarks.—Had the stone in this case been twice the weight it proved to be, I do not think there would have been any difficulty in removing it at one sitting.

Were it necessary or profitable to do so, I might relate the history of several more cases wherein I have disposed of stones weighing between 700 and 800 grains by litholapaxy. The cases, however, which I have now recorded, together with many others already reported by Freyer, wherein he has successfully removed very large calculi from the bladder by litholapaxy prove how wide indeed is the legitimate sphere of Bigelow's operation. Sir Henry Thompson is of opinion that a surgeon who is not practically familiar with lithotrity, on meeting with a hard calculus which he cannot readily seize with a lithotrite, will be more likely to achieve a lasting success for his patient by adopting supra-pubic cystotomy in preference to litholapaxy. This may be a wise and sound rule for those who at rare intervals meet with a case of stone, looking at the question from the standpoints of the patient's safety and the surgeon's reputation. But there is another standpoint from which this subject must be viewed, and it is this: Given a patient labouring under the presence of a hard and large stone lying in a healthy and roomy bladder, and an experienced and skilled litholapaxist at hand to treat him, what for the patient is the safest and most satisfactory method of getting rid of such a stone? The record of cases which I have now laid before my readers may supply the answer to this important question. For my part, I think that recourse to Bigelow's operation will best fulfil the requirements of such a patient. Believing, as I do, that litholapaxy is the best method of dealing with the vast majority of stones we meet with in men, women, and children, I must confess that I view with considerable apprehension and misgiving the attempts which are now being made in England by the advocates of supra-pubic cystotomy to apply this revived surgical procedure to the treatment of many cases of stone which would be more appropriately and expeditiously disposed of by Bigelow's operation. And now I leave to the judgment of practical surgeons in Great Britain this record of fifty-eight litholapaxies performed on male children.

St. James's-square.

NOTE ON THE

RELATIVE DIGESTIBILITY OF THE CHIEF ALBUMINOID PROXIMATE PRINCIPLES,

WITH REMARKS ON ITS BEARING ON INVALID DIET.

BY JAMES W. FRASER, M.D., C.M. ED., M.R.C.S.

IN the course of some experiments on peptic and pancreatic digestion, I had to work with small quantities of more or less pure albuminoid proximate principles, digesting them with peptic and pancreatic fluids. In estimating the results of these experiments, I was struck by the varying digestibility of the albuminoids, and thought that an account of the results obtained might be valuable.

The experiments were performed with a peptic fluid, consisting of Benger's liquor pepticus, diluted with a ·1 per cent. hydrochloric acid solution, and a pancreatic fluid consisting of the liquor pancreaticus of Benger. The digestion took place in small dialysers suspended each in a beaker containing ·1 per cent. hydrochloric acid solution for peptic digestion; the beaker, dialyser, and contents were kept at a temperature of 37·7° C. (100° F.), and peptic digestion continued for six hours; the liquids, both inside and out of the dialyser being kept in constant slight motion by suitable apparatus. At the end of peptic digestion, the contents of the dialyser were neutralised, and then made alkaline with carbonate of soda, so as to contain ·1 per cent. by weight of the salt, and liquor pancreaticus was added; the ·1 per cent. hydrochloric acid in the beaker was replaced by ·1 per cent. carbonate of soda solution, and pancreatic digestion was allowed to proceed for six hours at 37·7° C. At the end of this time the carbonate of soda solution was replaced by distilled water, and the beaker and contents heated till the temperature in the dialyser was raised to 80° C., so as to kill the ferment. Dialysis was then allowed to proceed for twenty-four hours. Of course, definite and fixed quantities of digestive fluids and external liquids were employed in all cases, and in most an equal quantity of the proximate principle was used. The level of the liquid in the dialyser and in the beaker was kept the same. The dialysed liquids from these periods of the experiment were preserved unmixed, and the results of each are noted under the heads of "peptic digestion," "pancreatic digestion," and "dialysis" respectively. The dialysed liquids were evaporated to dryness in the presence of a small quan-

tity of purified chloride of sodium to make the residue a more manageable substance, and the amount of peptone dialysed estimated as nitrogen by a modified Nessler process, of which full details may be found in a paper on the Action of Infused Beverages on Peptic Digestion.[1] The results in these tables, unless otherwise stated, are expressed as nitrogen; and the amount of nitrogen passing through the dialysers from self-digestion of the peptic and pancreatic fluids, having been previously ascertained by experiment, has been deducted from these results.

Table I. shows the amount and condition of each albuminoid subjected to experiment, the amount of nitrogen and of dry solid contained, whether ascertained by experiment or calculated from the formulæ of former experimenters. Myosin gave so much trouble in preparation that only a very small quantity was used in the experiment with it in the cooked state, and the cooked myosin was prepared by boiling some of the samples contained much less dry solid than others; this depended partly on their physical condition, whether solution or damp solid. The very small amount of cooked myosin has been explained, and that in the case of alkali-albumen depended on the fact that the alkali-albumen had to be in acid solution for peptic digestion, and that this solution had to be rapidly prepared at the last moment to prevent the alkali-albumen changing into syntonin. Cooked serum-albumen was prepared from a solution of purified albumen concentrated at 37·7° C. till it was sufficiently strong to solidify on boiling. It was then heated to boiling in a water-bath and formed a pultaceous mass of granules of coagulated albumen held together by a more liquid substance. It was, therefore, more easily acted on by the digestive fluids than hard-boiled white of egg, as the latter forms a fairly homogeneous substance. No experiment was performed with fibrin, as this forms but a small element

* This result is rather too large, on account of the separation of the fibrinous clot noted in the text.

a solution of the raw substance in salt solution, filtering off the precipitated flakes and using them after pressing between folds of linen. The gluten used was a mere mixture of albuminoids, obtained by washing flour, and was not perfectly free from starch. The uncooked egg-albumen was a filtered solution of white of egg, and therefore contained the salts; and the cooked egg-albumen was hard-boiled white of egg. The raw serum-albumen experiments were performed with measured quantities of ascitic fluid rich in albumen, but containing salts, and in the first experiment a little fibrin. This latter had clotted out in the second experiment, and therefore the figures in Table I. are rather too large for the second case. The other proximate principles used were fairly pure samples. As will be seen from the table, of diet, and alkali-albumen was only introduced on account of its close resemblance to casein.

Table II. shows the amount of the proximate principle (expressed as nitrogen) peptonised and dialysed in each of the three periods of the experiment, and the total of the three. Table III. shows the percentage relation between the amounts dialysed and the amount of albuminoid actually used. In no case did 50 per cent. of the dry solids pass through the dialyser; this depending rather, it is to be believed, on the short period of dialysis than on imperfect peptonisation, for when solids were used in the experiment, in almost every case they were entirely dissolved, and no precipitate was caused by the heating to 80° C. at the commencement of dialysis. The nearest case to 50 per cent. passing through the dialysers is that of cooked myosin (47·15 per cent.), but this seems rather to depend on the

[1] Journal of Anatomy and Physiology, vol. xx., p. 361.

Digitized by Google

small amount used than on the special digestibility of the substance, for it is to be noticed that during peptic digestion only one quarter as much passed through the dialysers, as in the case of raw myosin, and that it is in the stage of dialysis that the amount is made up[2]. After this the most digestible albuminoid is raw serum-albumen, which in two experiments gave to dialysis 35·24 per cent. and 27·95 per cent. respectively, and the others follow in order: syntonin, 26·47 per cent.; alkali-albumen, 22·14 per cent.; raw egg-albumen, 20·91 per cent.; casein, 17·11 per cent.; cooked egg-albumen (first experiment), 17·9 per cent.; cooked serum-albumen, 17·05 per cent.; raw myosin, 13·91 per cent.; gluten, 9·61 per cent.; and cooked egg-albumen (second experiment), 9·21 per cent. It might have been expected that syntonin, whose digestion is already half done, would head the list, but this is not the case though only raw serum-albumen is fairly ahead of it.

in one case slightly the highest; then follows syntonin—a result which, here especially, might be expected to head the list, and whose secondary position has no apparent reason. The others in order are cooked myosin, raw myosin, cooked egg-albumen (first experiment), casein, gluten, cooked serum-albumen, cooked egg-albumen (second experiment), and alkali-albumen. Therefore the raw albumens appear most susceptible of peptic digestion, and syntonin next.

Turning next to tryptic digestion, cooked myosin heads the list; but the same reasons for regarding the total result of this experiment as doubtful apply to the partial result. Of the more certain experiments, the first, raw serum-albumen, is the highest, with 7·77 per cent.; next comes alkali-albumen, with 7·50 per cent.; followed in order by raw egg-albumen, raw serum-albumen (second experiment), syntonin, cooked serum-albumen, raw myosin, casein, gluten, and the two cooked egg-albumens, these last two not getting

Examining next the amounts of nitrogen dialysed in each stage of the experiment, it is seen that in the peptic digestion stage in no case did 2 per cent. pass through, a small result, amply accounted for by the short period of dialysis (six hours), and by the fact that the dialysable matters had to start from zero and be formed until a sufficient pressure, so to speak, to cause dialysis was obtained. The highest peptic results are with the uncooked albumens, serum being up to 1 per cent. Here the substances most easily soluble in an alkaline menstruum have naturally an advantage in digestion, which accounts for the high positions of the raw albumens, of the alkali-albumen, and of syntonin.

During these two stages peptones had been forming more rapidly than they could pass away through the parchment paper, and had accumulated in the dialysers; and hence, when, the ferment having been killed by heating to 80° C., dialysis was continued for twenty-four hours, a larger proportion of crystalloid matter passed through than in the former stages. These peptones are both of peptic and tryptic formation, as is also the case with those under the head of pancreatic digestion. The largest proportionate result is here again found in the doubtful case of cooked myosin, but it is not very far ahead of raw serum-albumen (first experiment), with 25·50 percent.; and this is followed by

[2] The relative digestibility of raw and cooked meat cannot be considered settled. E. Jessen (Zeitschrift fur Biologie, 1883) states that 25 grms. of cooked beef left a residue of 17 grms. to 18 grms. after twenty-four hours' artificial peptic digestion, while 25 grms. of raw beef only left 5·5 grms. Lehman (Physiological Chemistry, vol. iii., p. 318) distinctly states that raw meat is more difficult to digest than cooked. The digestibility of meat no doubt depends on other effects of cooking, softening gelatinous elements, &c., but the experiment above, though doubtful, points to the greater digestibility of cooked myosin as having a bearing on the matter.

Digitized by Google

syntonin, the second raw serum-albumen experiment, cooked egg-albumen (first experiment), alkali-albumen, casein, cooked serum-albumen, raw egg-albumen, raw myosin, cooked egg-albumen (second experiment), and gluten. All these substances, therefore, have valuable dietetic qualities—as was known in many of the cases, indeed, ages before the substances themselves had been distinguished; but their susceptibility to the various digestive fluids varies. Several of them are not ordinarily used as foods at all, as, for example, serum-albumen, raw myosin, syntonin, or alkali-albumen. But among these are the most digestible of the albuminoids, and though they may not be required in every-day diet in that of invalids, some of them would be invaluable.

A formula has been in use for preparing a meat-tea, in which by macerating raw meat with water containing a few drops of hydrochloric acid and some salt a solution containing myosin and syntonin was prepared, but, as it cannot be heated for fear of precipitating the myosin, it forms an unpleasant blood-red liquid, with the taste and odour of raw flesh, and therefore has not become a very popular article of invalid diet. With this exception, and that of foods more or less entirely peptonised, the more soluble albuminoids have been little used for dietetic purposes. Beef-tea, as ordinarily prepared, contains principally extractive matters, and owes the greater part of its nutritive qualities to the deposit of finely divided coagulated albumen and of small portions of muscular fibre which it contains. Now it would be a matter of no very great difficulty to make it almost as nutritious as an equal bulk of solid meat by the addition of roughly prepared albuminoid principles. The white of egg might be added to beef-tea warmed not above the coagulating point of egg-albumen (160° F.)—say not scalding hot. This, indeed, is frequently done, and greatly adds to the value of the beef-tea. But egg-albumen is not the most easily digested of these principles. Dried blood-serum is a commercial article, being easily obtained at the price of about 3*s.* a pound. The preparation of serum-albumen from this mixed substance is easy enough, but it is not to be bought, though possibly if there were a demand the supply would be forthcoming. But the crude article, though only partially soluble, will add greatly to the amount of albumen contained in beef-tea, if macerated in it at a moderate warmth and the undissolved part strained off. Paraglobulin will also be dissolved from the dried serum, if the beef-tea is made fairly salt. The taste of the tea is hardly altered by the serum. Again, if minced raw beef be just covered with very weak hydrochloric acid (four drops of acid to a pint of water) and left to macerate for a night, the liquid strained off and squeezed out of the flesh by wringing in a cloth contains so much syntonin as to become nearly solid on neutralising. Such a solution will remain clear after boiling to remove the raw flavour, and may be used either alone or added to beef-tea or beef extract.

For the sake of showing the advantages of such additions to beef-tea, four experiments were performed, rather roughly, but on the same principles as those detailed above, and in them 10 ccs. of ordinary beef-tea (made with a pound of lean beef to a pint of water), 7·5 ccs. of beef-tea, mixed with 2·5 ccs. of white of egg, 10 ccs. of beef-tea, containing the soluble part of 1 grm. of dried serum and 10 ccs. of hydrochloric acid beef-tea, were respectively digested with the same amounts of peptic and pancreatic fluids as in the other experiments. The results are shown in Table IV. The amounts of nitrogen found are larger than in the other experiments, this depending on the diffusible nature of the extractives in beef-tea and their high nitrogenous equivalents. In the peptic and pancreatic stages plain beef-tea heads the list, and this depends on the less quantity of extractives in the cases where albumens were mixed with the tea, but in the dialysis stage very considerably larger quantities of nitrogen passed through in the cases where egg-albumen and serum-albumen had been added—the egg-albumen slightly leading because more albumen was added in this case than could be dissolved from the 1 grm. of dried serum in that of the serum-albumen. Ten ccs. of beef-tea, with the addition of 20 ccs. of distilled water were subjected to dialysis into similar quantities of distilled water for similar periods to those in the digestion experiments, so as to ascertain if possible how much of the dialysed nitrogenous matter of the beef-tea was derived from extractives. The experiment was performed in the cold,[3] and this, and the absence of the acid liquid in the peptic, and of the alkaline in the pancreatic stage, probably combine to make the result smaller than it would have otherwise been. These results are shown in Table V., and what remains after deducting the total in Table V. from the totals of the beef-tea experiments in Table IV. is shown under the heading lettered E as albuminoid nitrogen—i.e., derived from digested albuminoids not extractives. The hydrochloric acid beef-tea follows far behind the ordinary form, though if all its nitrogen is albuminoid, it is probably more nutritious than ordinary beef-tea, though considerably behind that made nutritive by the addition of albumens.

A few practical hints from these experimental results may be worth noting. First, let it be said, that it is assumed that the digestive powers are not in entire abeyance; for such cases the food given by the mouth or by enemata requires to be in a digested form, and there are many forms of peptonised foods in the market, and many peptonising fluids more or less powerful. But in cases where the digestive powers are impaired but not extinguished, where they may be lost in the stomach but retained in the intestine, or, again, where some obstruction to the passage of solid food into the stomach is causing death by starvation the above experiments may give hints for treatment.

Taking the last first, a case of œsophageal stenosis, malignant or otherwise, in which operation is contra-indicated or declined, and the patient, unable to swallow solids, is sinking. Besides the ordinary endeavours at feeding by the mouth with soups, milk, stimulants, &c., and by the bowel with peptonised enemata, we can add greatly to the nutriment taken by the patient, as long as he can swallow fluids, by simply adding white of egg to his beef-tea at a temperature below that of the coagulation of albumen, or by dissolving in it the albumen of dried blood-serum and filtering off the insoluble part. By this latter means it would not be difficult to dissolve as much as 20 per cent. by weight of albumen in the soup, and so make it as nutritious as an equal weight of meat. Again, syntonin might be made and used alone or dissolved in the soup, and has the advantage that it can be heated to boiling and the raw flavour of the uncooked albumens avoided. Then, when the stomach digestion is impaired and our desire is to stimulate a somewhat lazy organ to action, not to humour it in its laziness by giving it predigested food only requiring absorption, in such a case the raw albumens stand pre-eminent as feeding substances, all of them easily acted upon by the stomach, but all requiring full digestion. They may be given in beef-tea or soups, or in coffee or chocolate, or raw eggs may be eaten, when, as Dr. Hodges said in a lecture recently delivered before the Boston Medical Improvement Society, they should be sucked out of the shell or broken into a glass and drunk out of it: not beaten up into a froth, as they usually are, which carries down entangled air into the stomach, causing flatulence and preventing that free mixture of the digestive fluid with the albumen which is so desirable for perfect digestion. But if the stomach be weaker and require some humouring, the syntonin solution will still give it enough work to do to avoid entire inactivity. The beef-tea, in which the albuminoids are recommended to be dissolved, has been shown to have peptogenetic properties, and would therefore stimulate the stomach secretion; and though Sir W. Roberts[4] has shown that it retards artificial digestion, yet he has also shown that this can be avoided by using a little additional acid in digestion or by removing the organic salts of the beef-tea by dialysis, and one or both of these conditions will be fulfilled in stomach digestion.

The experiments with casein and gluten appear to show that there are very few worse foods for a delicate stomach than the usual bread and milk, for, as has been seen, the stomach only dissolves about 6 per cent. of these principles in the same time that it dissolves nearly 2 per cent. of serum-albumen. And the casein in the experiment was in an easier form for digestion than that in which it is usually presented to the stomach, for as used it was in a fine granular form practically freed from fat with alcohol and ether: while cows' milk in the stomach forms dense solid clots, rendered all the more insoluble by the fat, which forms the greater part of their bulk. True, the bread acts as a diluent to the clots, breaking them up, with passages for the gastric juice; but still it is evident that for digestion by a delicate stomach bread and milk does not form an ideal food. Whey.

which contains all the lact-albumen and also a globulin, is a mildly nutritive fluid and easily digested, for the lact-albumen is the same as serum-albumen. When the stomach digestion is paralysed in acute diseases—a state which, as Sir W. Roberts states,[5] may be diagnosed by the inability to take solid food—the pancreas often retains its power of secreting a peptonising fluid, and the stomach becomes a mere conduit to the duodenum. When such a state occurs, it may not be desirable, for other reasons, to get much nitrogenous food assimilated, for as Auerbach[6] has shown, a nitrogenised diet increases the acidity of the body, and might, in such a case, tend to produce an attack of gout, as was mentioned by Dr. Allchin.[7] But in cases where it is desired to feed the patient through the intestine, the substances noted above as soluble in alkaline fluids, and therefore easily acted on by the pancreatic juice—viz., raw albumens, syntonin, or alkali-albumen,—may be used alone or dissolved in some meat tea.

Hull.

TWO RARE CASES OF ACUTE INTUSSUSCEPTION.

BY JOHN THOMAS, M.R.C.S., L.R.C.P. LOND.,
ASSISTANT-SURGEON TO DINORWIC QUARRIES HOSPITAL.

THE following cases I attended whilst assisting Dr. Smith, of Lewisham-road, London.

CASE 1.—On February 11th, 1886, at 11 P.M., I was summoned to see a child described as suffering from "fits from teething." The history given by the mother was briefly as follows: John C——, aged sixteen months, in good health, was suddenly attacked with great pain in the abdomen and diarrhœa on the 7th whilst at dinner. The diarrhœa, heedless of domestic remedies, continued until the 9th, when the little boy was better for some hours, and then relapsed into a worse condition. On the 10th he strained and passed nothing but slime. Towards the evening vomiting set in, and continued all night and next day until seen by me. In the afternoon of the 11th blood poured out from the body, whereupon the mother wrapped up the child from fright. I found the boy looking collapsed; pulse 146, and not compressible; abdomen empty and asymmetrical; a distinct hollowness to the right, and fulness to the left, of the median line. The infantile buttock garment was soddened with much dry and moist blood. A smooth resisting cylindrical tumour was felt beginning abruptly a little above and to the left of the umbilicus, and passing to the left became indistinct; another tumour passed downwards from the splenic region towards the pelvis—in short, corresponding to the anatomical tract of the colon. Per rectum, within easy reach of my finger was a smooth hard tumour unconnected with the walls, and bimanually impulses were conveyed to the iliac abdominal tumour. I reversed the child's position in bed, placing the pelvis high on the pillow, then kneaded the tumour from above downwards for about fifteen minutes, and administered a draught containing two minims of laudanum. I failed to improvise an insufflating apparatus.

On the 12th, at 9 A.M., I arrived with instruments for active interference, but was surprised to find the little one strongly resenting my interest in him. He had just passed a small liquid motion, clayey in colour. The abdomen was symmetrical and slightly tympanitic.

Remarks.—I trust the extreme rarity of natural subsidence of an intussusception of any magnitude is sufficient excuse for a contribution on a subject fairly thrashed out. "I have not found any case recorded in which spontaneous return of a well-recognised intussusception occurred" are the words of Mr. Jonathan Hutchinson,[1] and are fully endorsed by Mr. George Pollock in Holmes' "System of Surgery" (1883). I am not aware of any other recorded case. The hollowness of the right flank, *signe de Dance*, "is of little or no value."[2] In this case it tends to support the view that the first portion of the colon is displaced. The factors which co-operated in bringing about cure are probably the following:—(*a*) prostrate condition of the child; (*b*) impulses given to the intussusceptum in the rectum by the finger simulating more or less the obsolete treatment with bougies; (*c*) descending or downward kneading probably played an important *rôle* in undoing a folded sheath, so that the two outer layers of the intussusception came into a nearly plane contact—clearing the course, so to speak, for the muscular element; (*d*) laudanum; and (*e*) pre-eminently the smooth muscle of the gut acting under favourable circumstances. Had I continued the kneading the intussusception might have been reduced when first seen. *Experientia docet.*

CASE 2.—E. R——, a fine healthy boy, aged five months, was suddenly seized with an unusual fit of crying and vomiting on March 29th, 1886, at 6 A.M.; straining and passing scanty motions tinged with blood soon followed. Castor oil was given by the mouth and rectum, and the child's abdomen became swollen from the onset of the symptoms. The preceding is the mother's story.

When seen on March 31st, I found the child's abdomen greatly swollen and tympanitic, globular in form, and the greatest measurement was around the pit of the stomach. The child cried and strained violently and simultaneously; in the intermission he was quite calm and did not object to any manipulation. Per rectum, I indistinctly felt something. The anus was dilated with two teaspoon blades, and when the child strained a darkly congested body like the os uteri (this is not a new simile, but a good one) appeared, and quickly retreated when straining ceased. Temperature 99°; pulse 140, fairly full. With a six-ounce injection bottle which was at hand I cautiously injected lukewarm water, some of which returned. I filled the bottle a second time, and when half emptied under moderate pressure a rumbling noise was heard in the abdomen. No water returned, and half a teaspoonful of brandy was given to the child. I felt hopeful, but far from confident, there being no straining and the infant taking the breast without vomiting. In an hour and a half death supervened, sixty-six hours from the onset of the attack.

Necropsy.—Enormously distended coils of intestine protruded as soon as the abdominal cavity was opened; the adjacent surfaces of the coils were adherent through small greyish patches of lymph. In the pelvis was about half a tumblerful of water. It was most difficult to reach the intussusception, and manipulation of it was almost impossible without first letting the gas out of the intestine. There was a descending meso-colon. There were no adhesions in the intussusception, which extended from the spleen to the first portion of the rectum. The sheath was considerably folded, especially near the neck of the intussusception; it (the sheath) was thickened in the part most distant from, and thinned in the part next to, the meso-colic attachment; there was a rent in the thinned portion. The middle layer was three-eighths of an inch thick opposite to its fold, and of the thinness of paper near its fold. The inner layer was deeply congested.

Remarks.—The involution commenced in the ileum and passed through the ileo-cæcal valve; the cæcum and the ascending and the transverse colon then contributed to the growth of the invagination. This form of intussusception is the most rare, and has been termed "the ilaca-ileo-colica" by Leichtenstern.[3] Miss Lane very kindly made for me the appended sketch, which shows well the one-sided apical os and the ileo-cæcal aperture higher up. Post-mortem

examination again taught the advisability of emptying the bowel of its gases as soon as the peritoneal cavity is reached, had laparotomy been performed in such a case. Emptying the bowel with an aspirator, such as Dieulafoy's, would ensure rapid evacuation and bottling up of the obnoxious gases. Traction on the entering layer of the intussusception would not reduce it, but by fixing the entering layer with one hand and unfolding the wrinkles of the sheath with the other, beginning from below and finishing with the wrinkles of the "neck," reduction became possible and easy. Rupture of the gut must have occurred early in the case during one of the peristaltic squalls, and the position of the rent is highly suggestive. The attenuated condition of the sheath in the neighbourhood of the meso-colic attachment—the most fixed part—is hardly due to circular stretching of the walls of the gut, for the intussusceptum is not enough to fill it; it is probably not due to longitudinal stretching, for the folds could have so easily supplied the need. The thickening of the part most distant from the meso-colon, I need hardly remind the reader, is accounted for by œdema and hæmorrhage; but where is the muscle fibre of the thinned portion gone to? In the gravid uterus at term, when it cannot get rid of its contents in due time, it is well known that retraction of the smooth muscle towards the fundus uteri takes place to a dangerous degree, and during one of the uterine contractions "snap" goes a rent in the attenuated part below the "ring of Bandl," unless art or nature brings the case to another issue. Now, if the thinning of the one side of the bowel has contributed to the thickening of the other side, it is a parallel to what obtains in the uterus.

Llanberis, North Wales.

IMPERFORATE ANUS AND RECTUM; RECOVERY.

BY R. HERBERT BARKWELL, M.D.

THE subject of this malformation, an ill-nourished male child, had been born twenty-four hours when, on June 18th, I was called to see it. The case being complicated, instruments had been used at the birth, causing facial paralysis. I was informed that there had been no evacuation from the bowels. I found the anus imperforate, and proceeded to operate in the following manner. The infant being held in the lithotomy position, I dissected along the mesial line, in the natural position of the anus, to the depth of 2⅛ in.; then with a trocar and cannula I perforated ½ in. further without encountering the bowel. Failing here, I decided to perform colotomy on the following day; in the meantime the perineal incision was washed with a solution of carbolic acid, and dressed with carbolic lint. On June 19th, chloroform having been administered, I made a transverse incision about one finger's breadth above and parallel to the crest of the ilium of the left side, and 2 in. in length. The skin and superficial and muscular tissues were successively divided on a grooved director, and the peritoneum incised to the same extent. The hæmorrhage was copious, and required a sponge soaked in a solution of carbolic to be constantly used, the instruments being also kept wet with it. Recognising the descending colon by its large, dark-greenish, and distended appearance, as compared with the small and light appearance of the smaller intestine, with a polypus forceps I picked and brought it up, outwards and backwards, to the margin of the incision at its posterior part; four curved needles with silver wire fixed the intestine to the abdominal wall; the colon, together with the peritoneum, was sutured at four points to the margin of the wound to prevent it from slipping back and to prevent meconium from escaping into the abdominal cavity. The most projecting part of the colon was now opened; no meconium having escaped, I introduced the broad end of a director and brought away some of a dark-green colour. The abdominal incision being larger than was necessary, I used, to close it up to its margin, three sutures, two anteriorly and one posteriorly. The infant was now given a warm bath, wiped perfectly dry, and placed before the fire, after which it revived considerably from the effect of the chloroform, which had been continued from the commencement to the close of the operation, its movements causing some meconium to escape. The wounded parts were then washed with a 1 in 80 carbolic lotion and dressed with carbolic lint.

During the first few days, the mother's supply of milk being deficient, goat's milk was substituted.—June 20th: Wound looks well; washed and dressed with carbolic lotion and lint; infant vomited at intervals during night, colour greenish yellow; prescribed three grains of nitrate of potash, six grains of bicarbonate of soda, ten minims of tincture of digitalis, six of tincture of belladonna, with one ounce of water, half-teaspoonful doses to be taken every three hours. At 10.30 P.M. the vomiting had ceased, and a little milk given was retained; motion passed of a dark-green colour; re-dressed the wound; no sign of pus. 21st: No motion during night; introduced a grooved director, and, holding the child with left side downwards, a fair quantity came away; commenced taking mother's milk; goes on favourably.—22nd: Meconium continues to discharge freely, but in the evening director again required to render discharge free; vomiting returned.—23rd: Condition the same as on the 22nd.—24th: Two sutures removed; there continues a healthy discharge of fæces each time wound is dressed, which I continue twice a day; margin of wound looks inflamed, due probably to irritation of sutures.—26th: One suture removed; wound improved. At 10.30 P.M. another suture was removed; wound looks well. 27th: Infant improves in every way.—28th: Removed remaining suture; re-dressed wound.—29th: Wound looks well and healthy; no discharge; washed and dressed as usual.—30th: Fæces have become small and solid; wound assuming an elliptical form; perineal wound quite healed.—July 1st: Infant photographed; bowels moved freely.

July 3rd.—Finding the bowels inactive, I prescribed liquor sennæ dulce (two drachms), liquor hydrarg. perchlor. (one drachm), and an ounce of water; one half-teaspoonful p. r. n. —4th: No motion passed; one drachm of castor oil given; not succeeding, I removed the fæces again with director, and ordered one drachm of castor oil at 11 P.M.—5th: No motion; repeated castor oil (one drachm and a half) and liquor sennæ dulce (twenty minims); bowels acted slightly. In the evening repeated castor oil (one drachm).—6th: Milk slightly returns; bowels acting better, but not freely. Gave liquor sennæ dulce again. Has not taken the breast during the day; skin looks drawn; infant peevish and ill.—7th: Infant somewhat better; resumed the breast; still vomiting. The bowels not acting freely, I ordered calomel in one-grain doses to be given night and morning. Wound is now perfectly healed.—8th to 12th: Infant is progressing favourably; calomel, with castor oil, continued at intervals.—12th to 15th: Less aperients required; half-grain doses of calomel to be repeated at night only. From the 15th I commenced giving twenty-minim doses of cod-liver oil, and also continued to have the chest rubbed with it daily. From this date everything has gone on satisfactorily, the infant gaining strength rapidly.

The temperature never exceeded 100° F., and to the end of the convalescence remained nearly normal. The strictest antiseptic precautions were observed throughout the case. I have been somewhat prolix in details of the after-treatment, because I consider that the ultimate success of an operation chiefly depends upon this being carried out. In conclusion, I have to observe my operation is a repetition of Amussat's, slightly modified on the method of Littre, being more adapted to suit the exigency of this case. I wish to acknowledge my indebtedness to Dr. Richardson, who during the operation kindly gave me every assistance.

Lavender-hill, S.W.

HOSPITAL SUNDAY.—The Lord Mayor has received from Sir P. Cunliffe Owen a letter stating that he was requested by the Prince of Wales, Executive President of the Royal Commission for the Colonial and Indian Exhibition, to enclose a cheque for £104 5s. 8d., being the amount received from Oct. 8th to Nov. 10th in Dr. James Aveling's "Mechanical Begging Boxes" at the Exhibition for the Hospital Sunday Fund. This makes a total of £404 5s. 8d., resulting from this ingenious mode of collection.

NORTH-WESTERN ASSOCIATION OF MEDICAL OFFICERS OF HEALTH.—The monthly meeting of the members of this Association was held on the 17th inst., Dr. Kenyon in the chair, when it was resolved that Dr. Vacher, Dr. Kenyon, and Dr. Hope be appointed a subcommittee to consider a letter from the President of the Metropolitan Society of Medical Officers of Health inviting medical officers to form themselves into one general society, and to report thereon at a future meeting.

POPLAR AND STEPNEY SICK ASYLUM.

AN UNUSUAL CAUSE OF EMPHYSEMA; NECROPSY; REMARKS.

(Under the care of Mr. W. H. PEARCE.)

SURGICAL emphysema is usually produced by injury to the respiratory or alimentary tracts, and of these wound of the former, as is well known, is by far the most common cause. In connexion with the digestive tract, the situations in which it has been met with are, over the abdomen after wound of the intestine, and in the pelvic region after damage to the rectum or perforation of its wall by ulceration. Emphysema is also found in other conditions, such as wounds of a crushing or lacerating character, chiefly in the limbs, and also accompanying decomposition of parts. In the following case a most unusual condition was found at the post-mortem examination (*q. v.*), and the extravasated air had followed the course taken by the escaped air in some instances of injury to the root of the lung.

Wm. P——, aged forty-four, was admitted in a dying state on Monday, Oct. 25th, at 5 P.M. From the little information that could be gathered from the man himself or his friends, it was learned that he had always enjoyed good health and had followed his usual employment until the previous Saturday. He admitted being a "free drinker," and on Saturday night he had been "the worse for liquor," but, so far as he knew, he was not injured in any way. He did not feel well on the Sunday, and remained in bed until late in the afternoon, when he dressed and went out for half an hour. Soon after his return he "began to swell, and his breathing got bad." He had urgent dyspnœa, his skin and mucous membranes being very blue, and his pulse quick and feeble. His face and neck were much swollen, especially on the left side, and on palpation this was found to be due to emphysema of the subcutaneous connective tissue, which on further examination could be traced all over the trunk as low down as the hips, and for some distance down the arms. He denied having sustained an injury, and on careful examination by Mr. Bostock and Mr. Pearce, no injury to the ribs or respiratory tract could be made out. The chest wall moved very little in respiration, the breathing being for the most part diaphragmatic. Percussion elicited a resonant note all over the chest, though at the bases and in the axillæ the note was flatter than that obtained at the anterior and upper part of the lungs. In the former situations there was almost an entire absence of breath sounds on both sides in the lower half of the chest, but in the former air entered freely. The heart's apex could not be made out. His breathing gradually became worse, and he died somewhat suddenly three hours and a half after admission.

Necropsy, forty hours after death.—The body was that of a stoutly-built, well-nourished man, of middle age. On opening the chest there was no fracture or other injury to the chest wall, but both pleural cavities contained a considerable quantity of fluid, the lower lobes of both lungs being compressed and airless. Much recently effused lymph covered the surfaces of the visceral and parietal pleuræ on both sides. On clearing away this, and separating the lower part of the left lung from the pericardium, a collection of undigested food was found outside the œsophagus, occupying the posterior mediastinum and surrounded by emphysematous connective tissue, which could be traced up the spine to the root of the neck. The food had escaped through a ragged slit-like opening of an inch long, and situated vertically in the œsophageal wall about an inch and a half from its lower end. Passing downwards in the substance of the wall of the œsophagus was a sinus, which connected the opening with a small circumscribed abscess (about the size of a hazel-nut) situated in the wall of the stomach along the lesser curvature close to the cardiac orifice; this again opened into the cavity of the stomach by a small opening, so that gas or air could pass in freely from the œsophagus or stomach. A small quantity of pus was found in the small abscess in the stomach, but there was no sign of any in the mediastinum. There was no trace of ulcer in the œsophagus, the opening being a mere ragged slit, with black unhealthy-looking edges, outside which the gullet appeared healthy; but here doubtless the mischief must have begun and an abscess formed, the pus burrowing down and finally discharging into the stomach, the œsophageal wall giving way either at the same time or later.

Remarks by Mr. PEARCE.—As to the cause of the abscess, the only thing that suggests itself to my mind is the lodgment of a foreign body, such as a spicule of bone; but there seems to have been no symptoms up to the time when the œsophageal wall gave way, and gas or swallowed air escaped into the mediastinal connective tissue. I did not make out before the necropsy the considerable amount of double pleuritic effusion, believing as I did that the cause of the emphysema must be due to injured lung from obscure fracture of the ribs, and that the compression was being exercised by internal hæmorrhage.

ROYAL HOSPITAL, PORTSMOUTH.

LACERATED WOUND OF THE KNEE, FOLLOWED BY TETANUS TWENTY-TWO DAYS AFTER THE ACCIDENT; TREATMENT BY CHLORAL HYDRATE; RECOVERY; REMARKS.

(Under the care of Mr. HENRY RUNDLE.)

W. C——, aged fifteen, a healthy lad, was admitted on Dec. 8th, 1885. Whilst holding on to the back of a cart he slipped and was dragged along the ground, sustaining a lacerated wound, about four inches in length, over the left knee. There was no fracture. The wound was washed clean from gravel and dirt, and dressed with carbolised oil. Five days after admission suppuration occurred; openings were made, and a drainage-tube inserted for twenty-four hours. The wound was granulating healthily, when on Dec. 30th symptoms of tetanus appeared, well-marked risus sardonicus, and seven or eight attacks of clonic spasms during the day. He swallowed with some difficulty. Breathing easy. Temperature 99°; pulse 130. He was ordered a free purge and chloral hydrate in ten-grain doses every four hours, and removed to a quiet and darkened part of the ward.

Jan. 1st.—Experienced great relief after medicine. Spasms less frequent; abdominal muscles hard; wound suppurating; poultices applied. Milk, beef-tea, and juice of raw meat to be given between the spasms.

2nd.—A quiet sleep after each dose of medicine, which he asks for to "keep off spasms." Temperature 98·2°. Three or four spasms during the day. Complained of difficulty in passing urine, which was relieved by hot fomentations.

3rd.—Improved. Three spasms during the day. Abdominal muscles still hard and contracted.

During the next six days the spasms diminished both in frequency and severity, and ceased on Jan. 9th. The chloral hydrate was continued, but less often, up to Jan. 19th. From this time the wound continued to heal, and he was discharged well on March 16th.

Remarks by Mr. RUNDLE.—The boy being able to swallow, although with difficulty, was a favourable symptom. In the treatment of tetanus, it is essential to keep up the strength by giving nourishment with a liberal hand, milk and juice of raw meat being the best food. I think there can be no doubt that the medicine aided materially in the recovery of the patient, for the chloral hydrate not only induced sleep, but, by diminishing the reflex irritability of the spinal cord, lessened the frequency and violence of the spasmodic attacks. The boy asked for this medicine before it became due, as he was afraid of the spasms recurring, and he was so convinced of its efficiency to keep them off. The other points of treatment were free purgation and keeping the patient as quiet as possible, free from any cause of excitement, including light and sound. A point worth noting was the low temperature; once only did it reach 99°, being at other times normal.

MULTIPLE MELANOTIC SARCOMATA; DEATH; NECROPSY.

(Under the care of Mr. RUNDLE.)

E. Y——, aged forty-five, was admitted on Feb. 4th, 1886. There was no history of tumours or malignant disease in the family. Has always been delicate. Has had eight children

Digitized by Google

The present illness commenced six months ago, when she first noticed a lump like a pea in the skin under the right breast. This grew rapidly, but as it did not give her any pain she delayed seeking advice until a week before admission. In the right breast there is a semi-fluctuating, purplish tumour, movable on the thorax, the size of a large orange. The left breast has the appearance of extravasated blood, evidently containing a growth. Other small tumours, six in number, ranging in size from a walnut to a pea, and having the same bruised appearance, exist over the sternum and in the abdominal wall.

Feb. 11th.—The right breast was excised, and three small tumours on the abdomen. Free hæmorrhage during the operation.

16th.—Wound of small tumours healed, but that of breast breaking down and discharging. Patient weaker and losing flesh.

The progress of the case was unsatisfactory. The granulations over the right breast became gelatinous in appearance, and the other growths increased in size, and fresh ones appeared on the abdomen. The patient sank gradually, and died from asthenia on April 20th. A microscopical examination of the growth removed showed spindle and fusiform cells pigmented.

Necropsy, forty-eight hours after death (from notes by Mr. C. C. Claremont).—Body emaciated. In the situation of the right mamma is a well-defined fungating tumour, covering an area of about six inches square, and reaching to the middle line. The tumour at the surface is black, softened, and seems to be mainly slough. The deeper part, reaching down to the periosteum, is white, soft, and brain-like The ribs are unaffected. There is a tumour in the left mamma. Under the skin of the trunk and thighs are fourteen tumours, soft, sharply defined, and some fluctuating. Dissection shows some of them to be of the same white, soft material as the large tumour; others are more or less pigmented with black material, and some contain broken-down blood-clot. They vary from the size of a hazel-nut to that of a walnut. Abdomen: The transverse colon, being distended and translucent, exhibits several black patches the size of a finger-nail. In connexion with the omentum are four or five tumours, more or less pigmented, and similar to the subcutaneous ones. The mesentery presents at least a dozen of these small tumours, which appear to be covered by peritoneum; some are free from pigment. In front of the left kidney is a tumour the size of the fist, mottled white and black, and containing a cavity of broken-down blood-clot; similar but smaller tumours were found at the lower end of each kidney. A small patch of pigment in left supra-renal capsule. Liver and kidneys markedly fatty in appearance. Thorax: Small, partially pigmented tumour in the anterior mediastinum. Lungs emphysematous and congested posteriorly. Heart walls fatty: valves healthy. Skull not opened. All the tumours examined were encapsuled.

CRUSH OF LEGS BY TRAM-CAR; DOUBLE AMPUTATION BELOW THE KNEES; RECOVERY.

(Under the care of Mr. RUNDLE.)

Henry D——, aged ten, was admitted on Oct. 17th, 1886. Whilst crossing the road he was run over by a tram-car and sustained extensive compound comminuted fractures of both legs, the soft parts being much lacerated. On admission the boy was conscious, but much collapsed. Both legs were removed at once a hand's breadth below the knee, by circular operation on the right and flap operation on the left.

Oct. 18th.—Restless night. Pulse 140; temperature 103°. Very sick.

19th.—Still very sick. Pulse 130; temperature 103·2°. Very restless and delirious in the night. Hypodermic injection of morphia (one-sixth of a grain) at 9 P.M.

20th.—Slept fairly well. Pulse 112; temperature 100°. Retains food. Some of the stitches separated, and stumps discharging and inclined to slough.

26th.—Pulse 112; temperature 99·3°. Constitutional disturbance much less. Sloughs from flaps removed.

From this date he went on well. The flaps were brought together by strapping, and iodoform dusted over them, and by Nov. 30th the stumps were nearly healed.

AT an inquest held at Newport, on the 7th inst., on the body of a woman who had died from taking a dose of liniment instead of the mixture which had been prescribed for her, the jury returned a verdict of accidental death.

Medical Societies.

MEDICAL SOCIETY OF LONDON.

Hypertrophy of Thigh and Leg.—Cervical Pachymeningitis.—Lupus of Larynx.—Syphilis of Tongue.—Rare Syphilis of Face.—Talipes Equinus.

A CLINICAL meeting of this Society was held on Monday last, Mr. R. Brudenell Carter, F.R.C.S., President, in the chair.

Mr. BULL showed a boy with great enlargement of the left thigh and leg, which began six months ago. There was no evidence of tumour, phlebitis, or arterial disease. The thigh measured two inches more in circumference than the right side. The swelling was probably due to lymphangiectasis. There was no evidence of chyluria or albuminuria. It was not a case of asymmetry. The patient had never had any deep-seated phlebitis or attacks of erysipelas or erythemata.—The PRESIDENT asked whether there was any difference in the temperature of the two sides.—Mr. MARMADUKE SHEILD remarked that there seemed to be an elongation of the femur. Was this so?—Mr. J. H. MORGAN considered with Mr. Sheild that the case was of congenital origin.—Dr. A. MONRY inquired for filariæ sanguinis hominis.—Mr. NOBLE SMITH inclined to the view that the hypertrophy was congenital.—Mr. BULL said there was no difference in length or temperature in the two limbs.

Dr. ORD showed a specimen of Chronic Hypertrophic Cervical Pachymeningitis, in a footman aged twenty-six. Last Christmas (1885) he was seized with pain, stiffness of neck, sickness, and constipation. Temperature 103°; pulse 95. At another time the temperature was 101·2°; pulse 72. He had some shivering fits, which bore a resemblance to ague. He had delirium at times, and was very much weakened. Later he gained flesh and strength. In May of this year there was no fever, but great loss of power and wasting of muscle, and loss of sensation in the arms. The legs were in a state of spasmodic paraplegia. Two muscles have escaped to a large extent—the anterior part of the deltoid, and the biceps. There was some exaggeration of extensor tendon reflexes. Mechanical irritability of the muscles was excessive. The electrical state of the muscles was that of the reaction of degeneration. Sensation has improved, and there was some improvement in the power of the arms and legs. A claw-shape of the hands had developed since May. There was considerable curvature of the spine. Distressing attacks of diaphragmatic paralysis (?) had occurred of late. The skin of the fingers was wasted and smooth—somewhat glossy. A gradual osteo-arthritis had developed in several joints in the hand. There was no history of a chill, or injury, or syphilis. He advanced this case as an illustration of the hypothesis that a good many cases of chronic progressive affections of joints are dependent on altered states of nutrition of the spinal cord.—The PRESIDENT inquired whether the optic discs were affected.—Dr. BEEVOR thought it threw some light on the localisation of groups of muscles in the spinal cord. The facts of this case strengthened the results of experimental observations.—Dr. A. MONRY remarked on paralysis and dilatation of pupil; associated with atrophy of interossei.—In reply, Dr. ORD said the optic discs were natural, the pupils were somewhat dilated, and the left larger than the right. There were no evidences of abnormality in the pulse.

Dr. ORWIN showed a case of Lupus of the Larynx in a woman, associated with the same disease of face and nose.

Dr. COLCOTT FOX showed a case of Lupus of the Larynx associated with lupus of the face, palate, and scalp, in a boy aged seven years. Kaposi said that autochthonous affection of the larynx with lupus was unknown.—Dr. FELIX SEMON said that papillary excrescences and ulceration of the epiglottis were to be seen. He did not think lupus of the larynx so rare. Chiari had collected forty cases. In perhaps 5 to 8 per cent. of cases of lupus the larynx had been involved.—Mr. LENNOX BROWNE agreed with the remarks of Dr. Semon.—Dr. MORELL MACKENZIE had noticed the stridor in Dr. Orwin's case a month or more ago, and could not therefore set it down to the treatment by dilatation.

Dr. ORWIN showed a specimen of Syphilitic Affection of the Tongue in a boy aged nine, in whom there were no other evidences of congenital syphilis.

Mr. NOBLE SMITH showed severe cases of Talipes Equinus, in which he divided the tendo Achillis; and rapid extension,

Digitized by Google

with immediate reduction was followed by better results than obtained when the tedious method was adopted. The rapid method was one of tenotomy and immediate stretching.—Mr. J. H. MORGAN said he had been accustomed to treat cases in this fashion for many years past.

Mr. MARMADUKE SHEILD showed a case of Syphilis in a woman with a large fungating mass about the angle of the nose, which was believed to be the source of infection, but it had no resemblance to an ordinary chancre.

ACADEMY OF MEDICINE IN IRELAND.

Ovariotomy.—Nephro-lithotomy.

AT a meeting of the Surgical Section on Nov. 12th, the President, Sir WILLIAM STOKES, delivered the inaugural address, which was published in our issue of the 20th ult.

Mr. F. V. MACDOWELL read notes of a cases of Ovariotomy performed by him in Baltinglass Infirmary. The operation was performed by making an incision from the umbilicus to the pubes. The cyst was found so dense that the trocar would not enter it. An incision was made into the tumour, and the cannula, being connected with indiarubber tubing, was well embedded in the cyst, and secured in the usual way with spring hooks. Owing to the numerous adhesions, it was found necessary to enlarge the abdominal opening by three inches around and above the umbilicus. Twelve pints of amber-coloured fluid were drawn off. The pedicle was clamped, divided, treated with actual cautery, and, by a modification of the extra-peritoneal method, secured in the lower part of the abdominal opening, and retained there by harelip pins passing through it as well as the abdominal wall, the pins being retained *in situ* by carbolised catgut. The wound and pedicle were maintained perfectly aseptic by means of regular applications of iodoform. The operation was performed on March 31st, 1886. The patient moved about the ward within three weeks from that date, and in the sixth week walked one mile to the operator's residence on her way home.—Sir WM. STOKES congratulated Mr. MacDowell on his success, and hoped that many of his colleagues in the country would in like manner bring before the Academy the results of their practice.

Mr. KENDAL FRANKS read a paper on Nephro-lithotomy, and reported the case of a man aged twenty-eight from whose left kidney he had excised a large stone on the 6th of May last. The case made a satisfactory recovery, and was the first case of the kind in which the operation of nephro-lithotomy had been performed in Ireland. The history of the case dated back six years, when the patient, after a severe febrile attack, had hæmaturia, which lasted for three months. The symptoms he presented, from which the diagnosis was made, were: pain over the lower part of the left side of the thorax, and over the region of the left kidney, shooting downwards to the crest of the ilium and to the left groin. There was no testicular pain; tenderness existed over the last rib and below it on the left side on pressure; there were large quantities of pus in the urine, which, though fetid, was always acid. Added to these symptoms, the history of the case, the absence of bladder symptoms, and the absence of pyriform cells in the urine assisted in the diagnosis. The kidney was reached by the lumbar incision; the stone was felt, completely filling the pelvis, and was excised through an incision in the substance of the kidney. The calculus was friable, composed of phosphate of calcium, carbonate of calcium and ammonium magnesium phosphate, and weighed 171·3 grs. when washed and dried. It was removed piecemeal, being too large to extract entire. The lumbar wound healed by first intention, the site of the drainage-tube continuing to discharge urine for four weeks. The patient had returned to work several months ago; he was free from pain and in good health. He still passed some pus with the urine.—Mr. BARTON, having assisted in the operation, was impressed with the fact that it marked a new era in the progress of urinary surgery. Where a satisfactory diagnosis was established, it was the surgeon's duty to open the loin and expose the kidney, and then follow the lines of procedure indicated by Mr. Franks. The diagnosis was the first point of practical interest. He emphasised Mr. Franks' observation that the pain located in the loin was most reliable. The condition of the urine, too, left no doubt of calculus being present, surrounded by inflammatory exudation and pus.—Mr. THOMSON said the difficulty that must always present itself in such cases was that of diagnosis, and not the removal of the calculus, once its presence was made clear. He had seen two operations on the kidney, and he had another case under observation. In one there was a large distinct tumour on the left side. All the symptoms referable to stone in the kidney were present; but the organ was too large for removal through the lumbar incision. The tumour was removed and the stone found; but there was also a stone in the other kidney, and the result was fatal. In a proportion of those cases there was a great tendency to infection of the second kidney, and when one was removed it was not always certain that all the mischief had departed; indeed, the patient might be worse off than before. Another point of importance was in reference to the incision. Where the kidney was not specially enlarged so as to present a tumour in the abdominal cavity, the lumbar incision was attended with least risk. In one case of stone which he saw, the kidney was so large that there could be no question of the futility of attempting to remove it through the lumbar incision. The only proper course would be that adopted by Knowsley Thornton of removing the tumour by abdominal section and draining the abdominal cavity through the loin. —Mr. FRANKS, in reply, said of course Mr. Thomson referred to cases of nephrectomy, and not of nephro-lithotomy.

GLASGOW OBSTETRICAL AND GYNÆCOLOGICAL SOCIETY.

THE second Meeting of the session was held in the Faculty Hall on Nov. 17th. It was agreed that the meetings be held hereafter on the fourth Wednesday in each month.

Fomentation Bag.—Dr. SLOAN exhibited an indiarubber bag with an afferent and efferent tube, whereby uterine and vaginal fomentation might be maintained during pleasure. He said the invention was due to Dr. Alexander Robertson, one of the physicians to the Royal Infirmary. Water from 110° to 115° could be used, and for as long as half an hour at a time. The effect was found to be very grateful in inflamed conditions.

Blighted Ovum.—Dr. ABRAM WALLACE exhibited a blighted ovum, which old authors might have called a mole. The patient from whom it had come menstruated in June last, from which time she dated her pregnancy. At the end of August she noted a slight brown discharge. In September and October this recurred, and at the latter date she had ergot. About the beginning of November she returned to town, and soon after she aborted. The aborted mass corresponded very closely in appearance to that figured on page 278 of Playfair's "Science and Practice" as illustrative of oviminal apoplexy. In Dr. Wallace's case there was no history of syphilis. The lady had had five living and healthy children, but between the third and fourth there was a history of an abortion. In June the patient had rowed occasionally, which was an unaccustomed exercise for her; and later on in the autumn she had a serious shock to her nervous system on the occasion of the Crarae Quarry disaster.—Dr. SLOAN thought the presence of a brownish discharge occurring during pregnancy invariably indicated the fact of a clot having been thrown out between the utero-ovarian surfaces, and being in process of decompositon.

Puerperal Eclampsia.—Dr. MALCOLM BLACK read a paper on Puerperal Eclampsia, recording an experience of thirty-nine cases, of which four had occurred in his own private practice and the rest in the practice of the Maternity Hospital or otherwise. He said the proportional mortality was reckoned by Lusk as 1 in 500 cases, and by Churchill 1 in 600 cases, of confinement. He went deeply into the etiology, pathology, and treatment of eclampsia, and the paper was listened to with great attention, and followed by an interesting debate, in which nearly all the members present joined.

HOSPITAL SATURDAY FUND.—At a meeting of the board of delegates of this fund held on the 18th inst., the awards for the present year were agreed to. The following are the principal amounts:—Brompton, £589; London, £586; Victoria-park (Chest), £288; Middlesex, £276; St. George's, £267; St. Mary's, £224; Metropolitan Convalescent Home, £211; Westminster, £208; University College Hospital, £204; North London, £176; King's College, £175; Royal London Ophthalmic, £174; Royal Free, £168; Charing-cross, £162; and West London, £134.

Reviews and Notices of Books.

Diseases of Tropical Climates. By WILLIAM CAMPBELL MACLEAN, C.B., formerly Professor of Military Medicine to the Army Medical School, Netley.

THERE can be no doubt of the want of a treatise, brought down to date, on the subject of diseases of tropical climates, and there can be no question that the person to whom all would look for such a work would be the Netley Professor of Military Medicine.

In his introductory lecture Surgeon-General Maclean recalls most forcibly the immense saving of both human life and public money which has been achieved by the sanitary labours of the Imperial Medical Service, and while exhorting all to continue these efforts the lecturer adds a word of judicious warning to young surgeons, that when making suggestions to those "who have the responsibility of military command on their shoulders," they should not do so bumptiously, but rather modestly, and points out that memoranda not written as becomes "an educated gentleman" will fail to command attention. It is with some disappointment that on turning to the lectures on the vexed subject of cholera we find certain passages which show Dr. Maclean to be a little wanting in that toleration which he so wisely inculcates.

The author's views on the cause of the spread of the disease we find formulated in propositions lettered from *a* to *n*, which, when condensed, are as follows:—*a*. Bryden's endemic area of cholera is true, but not the only one. *b*. The force which gives epidemic energy is unknown. *c*. The south-west monsoon is the indirect cause of the dissemination of cholera, especially because it is before this wind that the large fleet of country boats moves up the Ganges—cholera thus spreading no faster than man moves. *d*. Cholera when raging in Burmah has never been carried to the Andamans. It can travel as fast against the wind as with it. *e*. The infective property of cholera is in the stools which have undergone change. *f*. These stools convey disease through drinking-water. *g*. Dried cholera stools may be carried by the wind and infect through the lungs. *h*. Food polluted with cholera stools induces the disease. *i*. Clothing soiled with the same may communicate it. *j*. Bodies of men may carry and propagate disease. *k*. A healthy regiment meeting and communicating with an infected one will certainly be affected. *l*. A regiment entering a tainted district will almost certainly be infected. *m*. If it occupies a used cholera camp it will certainly be infected. *n*. An outbreak on board ship will be found coincident with the opening up of some infected cargo.

In support of these conclusions Dr. Maclean offers the three following instances narrated by independent observers In the first, "a small quantity of fresh cholera stool was mixed with five gallons of water, and exposed to the sun for twelve hours. Nineteen persons partook of an ounce each; within thirty-six hours five of these had cholera." Again, "an epidemic in fifteen days carried off more than 100 of the high caste population, who drank only from two wells which were reserved in the centre of the village for their use, while not a single person of low caste whose drinking-water had to be procured elsewhere died; a street only separating the two castes, and in some places their abodes were continuous." Lastly, an account is given of a number of native prisoners who had been lately employed near the Moolah river being attacked with cholera; only those who drank below a certain dam were affected. Cholera prevailed a little at the time, and two cholera corpses had been washed below the dam."

While agreeing with Dr. Maclean that the balance of evidence at present justifies the belief that water is the chief means by which the disease spreads, we at the same time consider that his position as the instructor of those upon whom the future investigation of the source of cholera must devolve rendered it more than ever imperative that he should have also pointed out the arguments which favour the opposing view: for instance, the significance of the negative fact that fourteen persons swallowed with perfect impunity exactly the same dose of the same mixture which proved fatal to the other five, and the complicating factor that all were living within the choleraic field of an existing epidemic. Again, in the second instance the propinquity, and in some cases the continuity, of the abodes of the affected and unaffected would, while strengthening the contention in favour of its diffusion by drinking water, exemplify most strikingly the mysterious nature of the disease, which would appear at times to decline all other means of propagation. For the refutation of the "locomotive power" of wind in cholera epidemics Dr. Maclean relies apparently on proposition *d*, at the same time forgetting that, as a bimonthly mail, frequent trading steamers, and a large fleet of cargo boats keep up incessant communication between Burmah and the Andamans, his proposition (*c*) of boat-carriage is equally cancelled. Such easy disposal of the theory of wind locomotion is scarcely in keeping with the suitable tribute paid in his introductory lecture by Dr. Maclean to Dr. Bryden, "an officer of whom it is not too much to say that he was one of the ablest vital statists the medical profession has ever produced."

To the earnest seeker after truth there can be no such thing as hostile opinion, since every conclusion honestly arrived at by another should, by putting restraint on too hasty generalisation, prove a welcome assistance. We therefore regret the omission of all reference to the researches of Drs. Klein and Gibbes into the water-supply of the villages in the neighbourhood of Calcutta, and that from first to last there is no allusion whatever to the labours of the Cholera Commission, which published its report more than a year ago; and this is the more unaccountable as three of the author's colleagues formed part of that Commission. As it now stands, the young surgeons on probation may, as far as they can learn from the perusal of this work, remain in ignorance that such a Commission ever sat.

Passing to the excellent lectures on Malaria and the diseases produced thereby, we find that Dr. Maclean, while unable to entertain the proposition of cholera being "earth-born and air-borne," defines malaria as an "earth-born poison, for the most part generated in soils the energies of which are not expended in the growth and sustenance of healthy vegetation." This is scarcely less indefinite than the "certain electrical conditions" of Surgeon-General Munro, which the author summarily rejects. The directions for treatment will be of great use to young surgeons commencing practice in a foreign climate. One suggestion with reference to the use of quinine we miss—viz., the marked effect attainable by the hourly administration of even one grain for eight or ten doses. This was first pointed out by the medical officers who were in such straits during the Mauritius epidemic to economise the drug.

The lecture on Enteric Fever we can unhesitatingly commend to the careful study of every medical officer. It is clear and liberal, and points out the value of the "filth factor" in the production of the disease, while at the same time recounting the cases which occurred in South Africa and in the Soudan, in which the poison appeared to have been either autogenetic in the individual, or to have arisen *de novo* in the locality. In the directions given for the treatment of dysentery, the dose of tincture of opium (fifteen minims) with which it is proposed to prepare the stomach for retaining the half-drachm of ipecacuanha appears to be rather small; at least double that quantity has been found advantageous. The rules laid down for the

Digitized by Google

diagnosis and treatment of both acute congestion and suppurative inflammation of the liver must prove very helpful to the beginner, and we entirely concur with Dr. Maclean in his desire that the words "hepatitis, acute and chronic," should cease to form a cloak for slovenly diagnosis.

We regret that so many paragraphs of the lectures on malarious fevers, insolatio, and diseases of the liver should be devoted to warnings against antiphlogistic methods of a bygone period, and that Dr. Maclean should have thereby subjected himself to his own very apt criticism of "pulpit exercise, putting up a man of straw for the satisfaction of knocking him down again." We are also jealous of the space given to various extracts from writers whose labours we must always venerate, but whose teachings are not abreast of the discoveries of to-day. At the same time it is but fair to note that Dr. Maclean says that the regulation "that all lectures delivered here should be submitted to the Secretary of State for War, has acted as a check on him, as he cannot publish under a censorship."

We have long held that the young surgeons sent to Netley are the only State-aided men of science in the department of biology in the empire, and we are accordingly of opinion that it is incumbent on them, wherever their executive duties permit, to avail themselves of the opportunities of travel to seek the explanations of many obscure influences which materially affect life. Such a course produced a Darwin. But at the same time these young surgeons have every reason to expect that at Netley they shall be brought up to the latest date in the most recent advances of every science which bears upon their special calling. We would even venture to think that, as the professors of this school have the last word with the departing investigators, they might, having laid a solid basis for military medical practice, be a little bold with the theory, and, on the principle that "even a false theory, instead of hinderling, hastens the advance of knowledge," might, like Professor Aitken at page 77, project their ideas into regions where the scientific use of the imagination may be their chief guide. A little more robustness in the Netley teaching would not depreciate its value.

OUR LIBRARY TABLE.

Clinical Manual for the Study of Medical Cases. Edited by JAMES FINLAYSON, M.D. Second Edition. London: Smith, Elder, and Co.—The appearance of a new edition of this very complete guide to clinical investigation is significant of the increased attention that is being paid to practical study and ward work. The volume before us has the merit of being contributed to by several physicians, and is consequently thorough in its treatment of the various subjects. The editor is responsible for the main bulk—the sections on case-taking and on the symptomatology of disorders of the various systems; but Dr. Alexander Robertson contributes the chapter on Insanity, Dr. Joseph Coats that on Examination of the Fauces, Larynx, and Nose, Dr. W. Stephenson that on Disorders of the Female Organs, and Dr. Sampson Gemmell that on the Physical Examination of the Chest and Abdomen; whilst Dr. Gairdner introduces the volume with an interesting essay on the Physiognomy of Disease. The student could hardly wish for better guides, and the manner in which the subjects are dealt with proves the high standard of excellence in clinical teaching at Glasgow. In this new edition there have been several additions to the text, and many fresh illustrations have been introduced. A commendable feature is the bibliography appended to each section.

Knight's Manual relating to Dairies, Cowsheds, and Milkshops. London: Knight and Co.—In this manual all the provisions of the law and of the Orders of the Privy Council and Local Government Board which relate to the sanitary condition of dairies, cowsheds, and milkshops are collected and explained; and as the change that has been made by the Act of last session has had the effect of making sanitary authorities throughout the kingdom the bodies to administer the law as now altered, the local officials who are concerned in the work will be in need of such guidance as is here supplied. The supervision of dairies, cowsheds, and milkshops is a matter of no slight importance to a community like our own; and although the requirements of the Order issued by the Privy Council in 1885 are, from a sanitary point of view, by no means as complete as could be desired, one is able, with the assistance of the well-edited edition of the Order, which is comprised in this manual, to see exactly how far the application of any provision extends. Some useful hints are given as to the regulations that may be made by sanitary authorities under the Order; and a set of model clauses, which, it is stated, have been prepared with great care so as to meet all the requirements of the Local Goverment Board, as well as those of local authorities, is added for the guidance of such authorities. The book is throughout replete with useful and instructive notes in explanation of the requirements of the statutory provisions and the Orders. In one case, "dangerous infectious disorder" is stated to have been interpreted to mean "cholera, diphtheria, erysipelas, measles, scarlatina, small-pox, typhoid or enteric fever, and typhus fever," and the importance of such an explanation as this cannot be denied, for it so frequently happens that dairymen and others are under the impression that the regulations prohibiting infected persons from being concerned in the distribution or storage of milk apply only to some specially virulent forms of disease. In another note the important fact is brought out that the terms of the Order of 1885 are not sufficiently wide to prohibit the milk of cows suffering from disease during a milk-scarlatinal epidemic such as that which recently occurred in Hendon and London from being sold or used for human food, although such a prohibition exists where the animal is suffering from cattle-plague, contagious pleuro-pneumonia, or foot-and-mouth disease. Other instances might be given of the helpful character of the notes that are plentifully scattered throughout the book; but enough has been said to show that the work is likely to be extremely useful, and may be accepted as containing authoritative information which will be really helpful to all who are concerned in the administration of the Act and Orders with which it deals.

Vorlesungen über die Diagnostik der Gehornkrankheiten. Von W. R. GOWERS, M.D., F.R.C.P.—This is a German translation of the author's work on the Diagnosis of Diseases of the Brain. The translator, Dr. J. Mommsen, appears to us and to the medical press of Germany to have accomplished his task in a satisfactory manner. The demand that exists on the Continent and in America for Dr. Gowers' books proves his claim, should he care to establish it, to the title and designation of a successful and distinguished medical author of European and American reputation. Dr. Gowers' books are read in the English, French, German, and Russian tongues, and his other contributions to medical science are eagerly translated into the language of every country that can boast an acquaintance with the arts and sciences of the civilised world.

Leitfaden zum Gebrauch des Augenspiegels für Studente und Aerzte. Von Dr. ADOLF VOSSIUS. Mit 22 Holzschnitten. Berlin, 1886. Pamphlet. Pp. 78.—This is a short introduction to the use of the ophthalmoscope, and contains the substance of the author's lectures to his class. Thus he describes the nature and action of lenses, the refractive constants of the eye, the blackness of the pupil, the mode of illuminating the fundus, the appearances presented by the fundus, the diagnosis of astigmatism, and so on. Two or three chapters are devoted to the diseases of the choroid

Digitized by Google

and retina. The accounts given are good as far as they go, but are, of course, very brief—mere diagnosis, in fact.

On Heat considered as the Retinal Intermediate of Light and Colour Sensation. By L. WEBSTER FOX and GEORGE GOULD. Pamphlet. Pp. 23.—The authors accept Wundt's theory that light and colour sensations are modifications of a photochemical process, but propose to substitute the term thermal for that of photochemical; and they endeavour to show, with some success, that the conditions present are favourable to the preservation of heat and the conversion of light into heat.

Whitaker's Almanack, 1887.—This Almanack has this year been entirely recast and very greatly enlarged, extending now to no less than 632 closely printed pages. All its usual contents have undergone complete revision, much has been amplified and enlarged, and many fresh subjects of great public interest have been incorporated. Amongst the special articles are—an Analysis of the Irish Government and Land Bills; the Merchant Marine; the Navy as compared with the Naval Forces of Europe; and Annals of Her Majesty's Reign. The Almanack contains a greater amount of general information than it has ever done in past years, and is beyond question the best publication of the sort with which we are acquainted.

Diaries, &c.—We have received several specimens of these useful publications.—Messrs. C. Letts and Co., 3, Royal Exchange, have forwarded us copies of their improved *Office Diary* and *Note-book, Continuous Diaries*, and *Rough Diary*. These books are all well got up, some of them being interleaved with blotting-paper, and fully maintain the standard of excellence reached by this firm in past years.—*Pettit's Shilling Folio Scribbling Diary* will be found useful to those who desire to obtain at a trifling expense a volume for the record of their engagements and occupations during 1887.—*Blackwood's Diary* is published in an extremely convenient form and contains maps of some of the principal cities of Great Britain, together with information respecting cab fares, postal arrangements in various parts of the country, &c.—*Family Records* is intended to be what its name implies—viz., a record of all that is most notable: birthdays, marriage days, and death days, removals, agreements, engagements, &c., occurring in a family during a generation. It is published by Houlston and Sons, Paternoster-square, and will, without doubt, deservedly command success.

RUPTURE OF THE URINARY BLADDER.

To the Editor of THE LANCET.

SIR,—Whilst cordially congratulating Sir William Mac Cormac on an operative success, the importance of which can scarcely be over-estimated, I shall be obliged if you will allow me to make some remarks arising out of his references to my article in "Heath's Surgical Dictionary." 1. The remark quoted by Sir William was not, as he puts it, that "no indubitable case of recovery after intra-peritoneal rupture of the bladder is on record," but "no indubitable case of *spontaneous* recovery." The omission of the word *spontaneous* might make me chargeable with the rejection of Dr. Walter's case of successful abdominal section ten hours after the injury without suture of the rent in the bladder. I am not prepared for this. 2. Sir William says, "As regards the interval after the injury at which the operation may be successfully undertaken, this may possibly prove greater than has hitherto been held. Mr. Rivington speaks of some period within the first twenty-four hours. In one of my cases twenty-six hours had elapsed." I did not say that an operation could not be successfully undertaken after the first twenty-four hours. My words were, "abdominal section ought to be performed within the first twenty-four hours to have *a good prospect of success*." This observation was founded partly, perhaps, on Dr. Walter's case, but mainly on Dr. Vincent's experiments on dogs, which resulted in constant failure from urinary intoxication when performed twenty-four or twenty-five hours after the bladder was wounded. My object was to lay stress on the extreme value of early interference, in order to make sure of success. I sincerely trust that it will be found that the human peritoneum absorbs less rapidly than the canine, and that an operation done, say, within the first forty-eight hours may prove more often successful than the reverse, but I think that the prognosis becomes less favourable with every hour of delay. 3. Sir William says, "In ordinary traumatic cases of intra-peritoneal rupture of the bladder, the margins of the rent are generally lacerated in appearance, and soon become swollen. Mr. Rivington recommends paring these edges off, but when they are fully inverted by the method of suture, paring becomes unnecessary, and needlessly adds to the difficulty and duration of the operation." My words were: "Prevention of further accumulation and transmission of urine into the peritoneal sac in the male may be secured by sewing up the rent in the bladder with carbolised silk sutures, *with or without paring the edges of the ragged rent*. If this procedure be adopted, the bladder should be injected with water before the abdominal wound is closed, to make sure that leakage is not possible." It will be seen that I recommended not paring the edges as much as I recommended paring them. The fact is, that I was really uncertain which procedure absolutely to *recommend*. In my monograph on "Rupture of the Urinary Bladder" I rather leaned to the idea of not suturing the rent at all, owing to the lacerated and contused condition of the edges and to Walter's successful case. In the Dictionary, I had in my mind, when I used the expression "with or without paring the edges," either the adoption of Vincent's method of suture, or what is called with regard to the intestine the Lembert method adopted by Sir William Mac Cormac—a method which would not involve paring,—or else the adoption of paring to remove all spoiled tissue not likely to unite by first intention, followed by accurate adjustment of the edges of the opening. Experience had been so limited, and authorities so widely differed, that I added in the monograph: "Whether the rent in the bladder should be sewn up or not with or without paring the edges must be left to be determined by future experience"; and in the article "further experience is required to test the value of *all operative measures*." Owing to the very limited space at my disposal for my article in the Dictionary, I omitted the description of Vincent's method given in the monograph. These remarks will show that I did not write in that spirit of dogmatism which, however necessary it may be for instructing children, patients, and students, is in scientific matters unendurable, and, like the haughty spirit, often precedes a fall. Sir William Mac Cormac's fortunate experience must be taken as the guide in future operations, and proves the following points:—1. The advantage of operating as early as possible. 2. The advantage of thoroughly cleansing the peritoneal cavity by means of a mild antiseptic solution. 3. The superiority of carbolised silk to catgut for suturing the rent in the bladder. 4. The reliability and value of Vincent's *sero-muscular* (but *not serous*) sutures. 5. The reliability of the catheter as a means of removing urine from the bladder after *efficient* suturing of the rent in the bladder. My belief is that Sir William Mac Cormac's success is the prelude to similar success, not only in cases of rupture of the bladder, but in cases of ruptured intestine, and even of ruptured stomach. Dr. Blundell, who certainly preceded his American namesake in proposing to suture a ruptured bladder (see THE LANCET, Feb. 21st, 1829, p. 646) mentions (*in loco*) that "Mr. Travers, so well known by his excellent writings, has tied up with success a small aperture in the stomach." Celerity of operation would be absolutely essential in a case of ruptured stomach, and even more necessary in cases of ruptured intestine than in cases of ruptured bladder. Under these circumstances, I wish to suggest that house-surgeons should be instructed to take in and watch carefully all patients who had been subjected to such violence applied to the abdomen as would suffice to rupture one of the hollow viscera, whether exhibiting any immediate symptoms or not. It not unfrequently happens that cases of ruptured bowel and bladder are allowed to go home because at the outset the patients do not appear to have been seriously injured.—I am, Sir, yours, &c.,

Finsbury-square, Dec. 18th, 1886. WALTER RIVINGTON.

THE LANCET.

LONDON: SATURDAY, DECEMBER 25, 1886.

THE ANNUS MEDICUS 1886.

THE year 1886 will be remembered amongst us rather for medico-political changes than for any striking advances in medical science, though the record which follows will show that there is no halting in the march of the medical art. Medical practice has been less arduous, and probably less profitable than usual. The prevailing depression has doubtless led the public to regard medical care more as a luxury and less as a necessity; and disease itself, owing to the moderation of the seasons and the development of sanitation, has been less prevalent and virulent. But we anticipate our history.

Physiology.

In the wide domain of biology, the Germans have shown themselves extraordinarily active, and the attention of numerous observers has been directed to the comparatively new subject of bacteriology. The best works that have been published are those of FLÜGGE, "Die Mikro-organismen," which deals with microbes both in their histological and their hygienic relation, and is remarkably complete; CORNIL and BABES' "Les Bacteries," which is likewise very perfect, and is beautifully illustrated; and KLEIN'S admirable little work on Micro-organisms. Other important works on the same subject are those of HUEPPE, entitled "The Methods of Investigation in Bacteriology," of MITTENZWEIG on the "Relations of Bacteria to Infectious Diseases," and of HUBER and BECKER on the "Pathological Relations of Bacteria"; whilst a year-book upon the "Advances in our Knowledge of Pathogenic Micro-organisms, including Bacteria, Fungi, and Protozoa," has been written by Dr. P. BAUMGARTEN, and forms a volume of very respectable size. Several of these works give photographic representations of the objects described in the text, and those who are interested in such methods of illustration may read with advantage Dr. COWLEY MALLEY'S little work on "Photomicrography," which includes a description of the wet collodion and gelatino-bromide processes, with the best methods of mounting and preparing microscopic objects for photomicrography. The works that have appeared on General Physiology have been few, and have consisted chiefly in the publication of new editions of well-known treatises: such as those of LANDOIS, translated by STIRLING, which is certainly one of the best works on physiology hitherto written; and GRUENHAGEN'S edition of the WAGNER-FUNKE'S Physiology, a standard German work. Dr. FERRIER has published a new and valuable treatise on the "Functions of the Brain," being a second edition of his well-known work. Dr. DALLINGER, in his presidential address, delivered before the Royal Microscopical Society, took occasion to describe in detail the chief results he had obtained in a long series of researches, showing the great importance of the nucleus in the process of fission amongst the lower organisms, and in the more complex process of generation of new cells and animals. Many separate memoirs of value have, however, of course appeared. LANGLEY and EDKINS have shown that pepsinogen precedes the formation of pepsin in the glands of the stomach, and that the change of the former into the latter probably takes place only during digestion, and under the influence of acids. Quantitative researches on the constituents of the bile in infants by JACUBOWITSCH, show that, notwithstanding the large relative size of the liver in them, the proportion of bile secreted is less than in adults, and there is a remarkable absence of glycocholic acid in the bile of infants under one year old. DRECHSEL has isolated a peculiar azotised and sulphur-holding organic substance, which is contained in the liver of young animals, to which he has applied the term "jecorin," the composition of which is highly complex. SCHOTTEN believes that human bile contains a special biliary acid, which he names Anthropocholalic. MINKOWSKI extirpated the liver or ligatured the afferent vessels of the gland in many birds, and found that the quantity of urine increased, whilst the excretion of nitrogen by this channel fell to one-half or two-thirds its previous amount; the elimination of uric acid was greatly diminished, whilst that of ammonia was correspondingly increased. CHITTENDEN and LAMBERT adduce evidence to show that the sugar found in the liver after death is derived from proteids rather than from glycogen. The difficulties attendant upon the study of the dynamics of the circulation are considerable, and there are many points on which our knowledge is defective. An attempt to supply some of these deficiencies will be found in a paper published in MICHAEL FOSTER'S *Journal of Physiology*, by S. DE JAGER of Utrecht, which is well deserving of careful study. Nothing can show better the very uncertain foundations on which some of the most generally received opinions in physiology rest than the fact that within the last month two memoirs have appeared on the physiology of the respiratory movements which are strongly opposed to each other. One is by MAX MARCKWALD, who admits the existence of two centres of respiration, one for inspiration and one, which is excited with greater difficulty, for expiration. Both are situated in the medulla oblongata, but as a rule the inspiratory centre alone acts. He shows, in opposition to generally received theories, that the stimulus to respiration is neither a deficiency of oxygen nor an excess of carbon dioxide in the blood, since animals are capable of breathing for a long time without circulation of any blood at all. He thinks the real stimulus may be the products of the disintegration of the intercellular juices. WERTHEIMER, on the other hand, thinks there are no special centres beyond the vagal nucleus in the medulla oblongata, but that there are special centres in the spinal cord, and the stimulus he believes to act on the peripheric extremities of the vagus, and to consist essentially of changes in the gases of the blood. A very long and carefully written article on the mode of termination of motor nerves has just been published by KÜHNE in the *Zeitschrift für Biologie*, in which he describes the results he has obtained in a long series of preparations made from all classes of vertebrata. The end plates are fully described and shown to be beneath the sarcolemma of the muscular fibres. The illustrative drawings are very numerous. The origin and nature of the pineal body has long been a subject of discussion amongst comparative anatomists, and

Digitized by Google

various opinions have been propounded in regard to it: amongst others, suggestions have been made that it represents an eye formerly existing in saurians, and still existing in a rudimentary state in some reptiles. The subject has been carefully worked out in various lacertilia by W. BALDWIN SPENCER, who has brought forward much evidence in support of this view, and shows that the pineal eye was highly developed in ichthyosaurus and plesiosaurus, and may be regarded as peculiarly a sense organ of pre-tertiary periods. HORSLEY and SCHÄFER, from their investigations on muscles in contraction, have arrived at the conclusion that every prolonged contraction of the skeletal muscles which is provoked by excitation, whether natural or not, of any part of the nerve centres is a tetanic contraction which has been produced by a series of impulses generated in the nerve centres and passing along the motor nerves at an average rate of about ten per second. An excellent article has been published by W. H. GASKELL on the structure, distribution, and function of the nerves which innervate the visceral and vascular systems, which should be studied by every working physician, since it adds much to our knowledge on this difficult and obscure subject. Observations made by STEPANOW upon a case of aural disease, in which about the upper turn and a half of the cochlea were destroyed, has satisfied him that no positive statements can at present be made in regard to the functions of particular parts of the cochlea, since no defect in the perception of high and of low notes existed.

Pathology.

The most notable, or at least the most widely known, contribution to the pathology of the year is unquestionably the research of PASTEUR and his pupils into the nature of hydrophobia, and the practice of protective inoculation based on that research. The correctness of his experiments and the value of his discovery have been vouched for by independent observers, including a commission sent to Paris from this country in the spring; but, notwithstanding this, there still remains a degree of scepticism which will have to be met before the practice can be considered as established. A significant silence has been maintained on the subject in Berlin, where we naturally look for confirmation of facts of this class; whilst the very abundance of cases which have been treated by PASTEUR has rather obscured than elucidated the main issue, owing to the uncertainty of the bites inflicted being really those of rabid animals. Still, as has been justly remarked, if in only one case PASTEUR has succeeded in neutralising the effect of the virus, his method must be claimed as a real gain to our powers of prophylaxis. In connexion with this subject of rabies, it may be noted that Dr. DOWDESWELL announced in these columns the discovery of a microbe peculiar to the affection, which hitherto has evaded observation; but we are not aware that this discovery has been as yet confirmed. The transmission of disease to human beings through the medium of infected milk has received fresh and striking illustration in the investigations of Drs. POWER and KLEIN upon an epidemic of scarlatina traceable to milk and to the cows yielding it. The results of that inquiry point to a primary infection of the milk, and therefore to an actual transmission of this disease from the animal to man. The cognate subject of the transmission of tuberculosis by diseased milk has also during the past year received fresh substantiation. Bacteriology continues to be widely studied, and the extent to which it is pursued may be gathered from the fact that in Germany special journals have been started to be devoted solely to records of researches in this field. In this country owing mainly to the writings of WATSON CHEYNE, KLEIN, CROOKSHANK, and others, the methods of investigation pursued, and the characteristics of septic and pathogenic microbes have been made widely known; whilst the New Sydenham Society has done good service in publishing translations of many of the most important memoirs on the subject that have appeared on the Continent of late years. It would not be possible within the limits of a summary such as this to attempt anything like a detailed review of the advances made in bacteriology. Mr. WATSON CHEYNE has written on this subject in the pages of the *International Review of Medical Sciences*, to which we may refer our readers. But we may mention that the interesting subject of actinomycosis has been studied anew by Dr. T. ACLAND and others, and that the bacterium of pneumonia — the so-called pneumonococcus — has received a large share of attention; one interesting fact being its discovery in cerebro-spinal meningitis by FRÄNKEL, and another the differentiation of varieties of microbe by WEICHSELBAUM in the several kinds of pneumonia. Dr. DOWNES has continued his researches upon the influence of sunlight on micro-organisms; and Dr. PERCY FRANKLAND has studied the subject of the prevalence of bacteria in air and water, following up the well-known observations of MIQUEL. An important contribution to the etiology of endocarditis has been made by WYSSKOWITCH and ORTH, who were enabled to produce the disease experimentally by introducing streptococci into the circulation of animals whose valves had been injured. Fresh contributions to the subject of choleraic microbes have been made by Dr. CUNNINGHAM and Dr. KLEIN, the former to a certain extent retracting his previous opinions respecting the comma bacillus; but the past year has not, on the whole, produced much in the way of either confirming or disproving the alleged specificity of this microbe. The subject of ptomaines and leucomaines has been exhaustively treated by GAUTIER, and discussed at length in the French Academy. Early in the year CANTANI announced the successful treatment of phthisis by the bacterium termo, but not many months elapsed before this notion, wholly based on theoretical grounds of the antagonism between the tubercle bacillus and the putrefactive bacterium, was completely upset. Indeed, therapeutics have not yet been able to successfully keep up with the increase of knowledge upon the nature of many diseases. In the death of Surgeon-Major LEWIS we have lost one of the most painstaking investigators in bacterial pathology, whilst the English school of pathology has lost in Dr. MOXON one of its most brilliant and original exponents. The subject of evolution in pathology was ably treated by Mr. BLAND SUTTON in lectures delivered before the Royal College of Surgeons, based upon his investigations upon disease in animals. Dr. AITKEN also, dealing with the subject of evolution from another point of view, illustrated the relationship between febrile diseases. Prof. VIRCHOW,

Digitized by Google

again, has discussed the Darwinian hypothesis in its bearings on pathology, especially in respect to the transmission of acquired defects by inheritance. The Pathological Society of London has continued to do good work, the most notable feature of its past session being the exhibition of specimens of intra-cranial tumours by numerous members of the Society, and, amongst other contributions to the year's work, may be cited Mr. LANE'S observations upon the causation of rheumatoid arthritis, and Dr. PAYNE'S paper on granuloma fungoides.

Therapeutics.

There has been activity in every department of therapeutics during the past year. Hygienic, prophylactic, surgical and medical therapeutics have been agitated by the introduction of new methods, principles, and details. PASTEUR'S prophylactic must occupy the first place, though some will claim for it a pathological rather than a therapeutical position. Brain surgery has had some remarkable developments, and no less remarkable successes—witness the work of HORSLEY, HULKE, BARKER, MACEWEN, and others. The surgical treatment of empyema has been illustrated by Mr. RICKMAN GODLEE'S lectures at Brompton, and by a new method of treatment by *perflation* by Dr. EWART. The appearance of two more volumes of Dr. VON ZIEMSSEN'S "Cyclopædia of General Therapeutics" must be welcomed as attempts to place on a firmer basis the rational treatment of disease by artificial, climatological, and balneological methods. In the literary field we have had also a new edition of Dr. RINGER'S work; a new volume on "Materia Medica and Therapeutics" by Dr. C. D. F. PHILLIPS; new editions of "Waring's Therapeutics" by Dr. DUDLEY BUXTON, and of MITCHELL BRUCE; a small book by Mr. A. W. GERRARD; besides numerous pamphlets dealing with special diseases. Our columns show that the treatment of whooping-cough has occupied considerable attention. Cardiac tonics have received much practical consideration from Dr. JAMES BARR and Dr. SANSOM; in this department we may perhaps note a permanent and highly useful acquisition in the form of some preparations of strophanthus and strophanthine, which appear to be valuable in place of digitalis, and chiefly because the blood-pressure is not raised by the contraction of the arterioles. But it is too soon yet to decide as to the final outcome of this innovation. We believe that convallaria and convallamarine have not maintained their positions in the race with digitalis, which still holds the chief position (see the articles by Dr. SANSOM and our leading article on cardiac tonics). Cocaine continues to hold an important place in therapeutics, and has been used in almost every region of the body. It is not too much to say that this wide extension in its application has not been unwarranted. In acute pharyngitis, in prostatitis, in vaginal affections, sea-sickness, nasal and other neuralgiæ, in cancer of the uterus, nymphomania, and in many diseases of the eyes (as we remark in another column), its use has been attended with good results. We have heard something also of the toxic effects of cocaine, but some of these may have been due to peculiarities in the patient or disease for which the drug was administered, and perhaps sometimes to impurity of the drug. By some lanoline will be considered as the greatest addition of the year, and there can be no doubt of its value, especially in its higher penetrating property, as compared with other ointment bases. Naphthaline is a valuable internal antiseptic agent for certain cases of cystitis and intestinal disorders; ulcers have been treated by external application with excellent results. For the relief of pain and for counter-irritation solidified liniments of menthol and other articles have been freely employed, and appear to have found favour with patients and practitioners. Antifebrin and antipyrin are new antipyretic agents; the latter has been in use for a few years but the former is a recent acquisition, and is said to be four times as powerful as the latter. Acetophenone and urethane are additions to our means for combating insomnia. Hypnotism, with suggestion during the hypnotic state, has been advocated as a curious method of treatment (see p. 1157). Intubation of the larynx in diphtheria does not seem to have found many advocates in this country. Peritoneoclysis, hypodermoclysis, and vesicoclysis formed the subject of a communication by Dr. MACDOWALL on the treatment of cholera. Dr. CHEADLE contributed some valuable articles on the treatment of constipation in childhood and infancy. Of salicylates we have had salicylate of lithia as a substitute for the soda salt in rheumatism, though it does not appear to have been much employed. Salicylate of bismuth would appear to possess some advantages over the trisnitrate in some gastro-enteric affections. Salol is another salicylate in which one atom of hydrogen in the salicin has been replaced by the monovalent phenol group; it has antipyretic and antiseptic properties, and has been freely used on the Continent as a substitute for the soda salicylate. In the treatment of phthisis attention has been drawn to the value of inhalations by the mouth and gaseous medication by the rectum. The inhalation of hydrofluoric acid has been said to effect much benefit. The rectal medication comes from France, but has been tried also at the Victoria Park Chest Hospital, though with what results we are unable at present to say. The principle of the treatment consists in the introduction into the system of sulphuretted hydrogen along with carbonic acid (see THE LANCET, p. 638). Terebene, internally and externally, has been tried in chronic bronchitis and many other diseases of the chest, at the suggestion of Dr. MURRELL. In some cases it does a great deal of good, but by no means in all. Other derivatives of turpentine have also been freely used, especially terpine, on the Continent. Pyridin has been prescribed freely in asthma. Calomel as a diuretic has formed the subject of several communications to our pages. Viburnum prunifolium has been extolled for the prevention of abortion. The insufflation of iodoform into the trachea after tracheotomy has been favourably alluded to. Mr. TWEEDY has written on the mydriatic properties of hydrobromate of hyoscine. Electricity has been praised by Dr. STEAVENSON and Mr. BRUCE CLARKE in the treatment of stricture of the urethra, in cystitis, and in sciatica. The publication of Dr. MURRELL'S book on "Massage as a Mode of Treatment" was made the occasion for the free expression of opinion on the differences between ordinary medical rubbing, shampooing, pétrissage, and effleurage.

Of disquisitions on foods and feeding we have had abundance. Sir WILLIAM ROBERTS' book of Lectures on Dietetics and Dyspepsia, Sir HENRY THOMPSON'S book, and numerous

Digitized by Google

letters on infant feeding, with two leading articles in our columns, have formed the staple of this important department of therapeutics.

In the pharmaceutical region our progress has been uninterrupted. The various artificial foods, peptones, glutens, and the like, have further increased the resources of the practical physician. And there seems to be no end to the number of improvements in the art of manufacturing "elegant" preparations.

Surgery.

The introduction of what we know as the "antiseptic method" of treating wounds has revolutionised surgery in more senses than one. Previous to that time the treatment of wounds could not be said to be the subject of greatest interest and of paramount importance with all surgeons, and it was difficult to excite enthusiasm in a discussion as to the relative merits of poultices, ointments, lotions, and dry dressings. But to-day it is impossible to attempt any survey of the progress of surgical practice without at once speaking of the changes which are passing or have passed over what is now the universally received practice—antiseptic surgery. In reviewing the year's work, it is only fitting to chronicle at least two important changes—the abolition of the spray, and the substitution of simpler dressings for the old carbolised gauze. It is now some time since "*fort mit dem Spray*" formed the text for an able lecture which sent a thrill of horror through the more pious followers of Sir JOSEPH LISTER. To-day it is an accomplished fact, and there is now quiet and comfort where formerly hiss, bubble, and spurt, and wet irritating clouds made an operating theatre almost as terrible to surgeons as to patients. We are well aware that the spray is still extensively used by some operators, or for certain operations by others, but as a general adjunct to wound treatment it has distinctly, and we believe finally, fallen from the high position it once held. And this not because it has been found to be useless or harmful, so much as because it has been replaced by the safer, simpler, more handy, and more pleasant irrigation of wounds. Concurrently with this change we are witnessing the substitution of corrosive sublimate for carbolic acid as an antiseptic agent. For many years the original carbolic gauze has had serious rivals in salicylic and iodoform wool, and in thymol and eucalyptus gauze, but now it has been to a very large extent indeed replaced by salalembroth wool and gauze, although iodoform wool is still much used. Have these changes been attended with benefit? We believe that a distinct affirmative must be given to this question, and that there is a widespread feeling that the disuse of the spray and the substitution for it of corrosive sublimate irrigation has not only rendered the practice of antiseptic surgery simpler and pleasanter, but safer and more successful.

It would be impossible to refer here to every detail of surgical progress that has been chronicled in the year that is now closing, and we must content ourselves with mentioning some of the more prominent facts. In the front rank must be placed the increased and highly satisfactory results obtained in the department of cerebral surgery. Tumours of the brain have been successfully removed, traumatic epilepsy has been cured by operation, and cerebral abscess due to ear disease has been successfully brought within the dominion of the operating surgeon. Large sections of the skull have been removed with a freedom that recalls the practice so ruthlessly condemned by JOHN BELL. There is nothing special to chronicle in regard to pulmonary or thoracic surgery, and the completeness and success with which almost all abdominal affections have been submitted to operative treatment have left little room for improvement. Renal surgery has fully maintained its satisfactory position, and we can now speak of hepatic surgery. Incision and drainage of the gall-bladder, removal of biliary calculi, and drainage of cysts of the liver are all of them recognised and largely successful procedures. The most important facts in reference to the surgery of the bladder are two: that supra-pubic cystotomy has been frequently practised for the removal of tumours of the bladder, and that litholapaxy has been successfully practised upon boys for whom previously lithotomy would have been held to have been clearly indicated. Supra-pubic lithotomy has gained in favour in comparison with the perineal operation, and its greater safety is generally recognised. We must also direct attention to two cases of ruptured bladder which were recently successfully treated by suture by Sir W. MAC CORMAC. A revival of the old and discarded practice of the electrolytic treatment of stricture of the urethra must be mentioned. We need not venture on a prophecy of what this will effect, but some of those whose experience dates back for twenty years or more, to a time when electrolysis was as much lauded as now, are ill inclined to receive without question all the claims made for this revived method of treatment. Faith in its virtues has not been increased by some of the remarkable statements made as to the very speedy good effects of electricity upon chronic affections of the bladder. In the surgery of the limbs, it is to be noted that excisions of diseased joints are more and more unpopular, and that they are to a large extent superseded by the operation of erasion, which in suitable cases has given most excellent results. Our record of the year's advance would be very incomplete were we not to mention the growing popularity of cocaine as a local anæsthetic. The injection of one or two drops of a strong solution secures complete local anæsthesia, and permits of the painless removal of superficial tumours or of other slight operations, such as circumcision.

Such are the main points of interest in connexion with the surgery of 1886. The position now held by the surgeon's art is a very high and enviable one, and we may confidently anticipate that if at the end of next year we have to mention modifications of existing modes of practice, they will be improvements and developments as well. There never were so many good surgeons as there are to-day, and the combination which can now be often seen of manipulative skill, wide and varied experience, and scientific habit of mind is the surest guarantee of the future progress of surgery.

Obstetric Medicine.

In this department some excellent work has been done in the course of the year, and we would mention the following papers:—Dr. HERMAN on the production of the Shape of the Oblique Pelvis of Naegele; Dr. MATTHEWS DUNCAN on Contraction, Inhibition and Expansion of the Uterus, and on Elasticity, Retraction, and Polarity of the Uterus; Dr. JOHN

Digitized by Google

PHILLIPS on Spurious Hemaphroditism; Mr. ALBAN DORAN on Malformations of the Fallopian Tube; Dr. CHAMPNEYS on the Uterine Bruit; Dr. DAKIN on Mercurialism in Lying-in Women after Injection with Sublimate Solution; Dr. BERRY HART on the Nature and Causes of the Movement of Internal Rotation; Dr. MILNE MURRAY on some of the Physiological and Therapeutical effects of Water at Different Temperatures, with special reference to Obstetric and Gynæcological Practice; and Dr. HALLIDAY CROOM on the Etiology of Hæmaturia. Dr. BARBOUR opened an interesting discussion before the Edinburgh Obstetrical Society on Micro-organisms in their relation to Puerperal Fever, with special reference to Antiseptics. The operation of "spaying" has been much discussed; the report of the Committee appointed by the Liverpool Medical Institute to inquire into the frequency of the performance of this operation at the Liverpool Hospital for Women may, however, conduce to the formation of accurate views on the subject.

Ophthalmology.

In ophthalmic surgery the use of cocaine in various operations upon the conjunctiva—as, for example, in peritomy and the opening of tarsal tumours—has become general. It is also almost universally employed in the operation for the extraction of the lens in cataract, and manifestly with the greatest possible advantage to the patient. It does away with the serious effects accompanying the use of chloroform, avoids the distressing and dangerous sickness so often attendant upon the use of that agent, permits the patient to fortify himself with a little food before the operation, and enables the operator to proceed leisurely and to extract the lens without iridectomy, thus preserving a round and active pupil. With fresh and pure solutions, in strength not exceeding 4 or 6 per cent., which are quite sufficient to produce complete anæsthesia, no ill effects have been observed from its use. A very good paper on cocaine and its action on the pupil was read before the Royal Society (and has been published in its proceedings) by Mr. JESSOP. The useful plan of setting aside a special evening for the consideration of some one important disease, and of collecting from many quarters facts and opinions in regard to such disease, has been followed out with advantage by the Ophthalmological Society, whose handsome volume of Transactions for the present year opens with a memoir on the obscure affection known as Graves' disease, which contains the histories, more or less complete, of a large number of cases. The Transactions contain also a memoir of equal importance on sympathetic ophthalmitis, which is based on the accounts by various observers of no less than 200 cases, and which affords many hints for treatment in this serious affection. Other interesting subjects which occupied evenings of this Society were meningitis after excision of the eyeball (brought forward by Mr. NETTLESHIP); and the irrigation operation for cataract (by Dr. M'KEOWN), which consists in washing away the cortical substance so often remaining after extraction with pure water—the objection to which seems to be the danger, unless the instruments are exceedingly carefully kept and sterilised, of introducing foreign bodies into the eye and setting up inflammation of an unhealthy character; and a case recorded by WICHERKIEWICZ, in which a solution of carbolic acid was inadvertently injected, though it did not prove fatal to vision, shows that great care requires to be exercised. The treatment of ulcers and infectious abscesses of the cornea by lightly touching the affected surface with the actual cautery has been strongly recommended by NIEDEN, who reports that he has had 88 per cent. of successes, with the trifling drawback of a cicatrix, which did not, however, interfere with vision. The existence of a special bacillus in syphilis, constituting the active agent in various syphilitic affections advanced by various microscopists, and especially by LUSTGARTEN, has been contested by ALVAREZ, who, in a communication made to GALEZOWSKI's *Recueil d'Ophthalmologie*, maintains that the supposed bacilli of syphilis are identical with those found in the smegma præputii. One of the most valuable works hitherto published on the hygiene of the eyes—that, namely, by HERMANN COHN—has just been translated by Mr. W. P. TURNBULL, and well deserves to be in the hands of every schoolmaster and pupil teacher. COHN advocates the institution of a special class of experts, to be called "school doctors," whose function should consist in regulating the hours of work, the length of the holidays, the structure, heating, ventilation, and lighting of all school buildings, the construction of desks and forms, the treatment of epidemics, and various other duties. There can be no doubt that such an officer is urgently needed in English schools, for at present not one of the defects mentioned by Professor COHN receives attention in any of our public schools; and if boys do not suffer seriously, it is rather because in England the hours of work are, in comparison with those of France and Germany, considerably fewer in number, and are intermingled with much more relaxation. Lastly, we may call attention to the excellent treatise on the Accommodation and Refraction of the Eye by LANDOLT, which is undoubtedly the best that has appeared on this subject since that by DONDERS, published by the Sydenham Society twenty years ago.

Royal College of Physicians.

The large share which the College of Physicians is now taking in the duty of examining candidates for the licence to practise has considerably increased the work annually transacted within its walls. The meetings of its Fellows are therefore occupied with matters of much wider interest than formerly, and questions of considerable moment come up for their judgment. As we write, the highly important matter of medical degrees being granted by the conjoined Colleges is under consideration, the resolution to take action in the matter having been passed fifteen months ago by a large majority. Before the close of another year we may, then, see this question solved in a manner which, without in any way trenching upon the cherished privileges of the College, will show that it is in earnest in furthering the cause of medical education in London. The erection of the new Examination Hall by the two Colleges, and the Royal ceremonial that inaugurated the work, render the past year a memorable one in their history, and it seems probable that a further extension of the work of the Colleges will follow upon their acquisition of the land adjoining this building. The College of Physicians has also during the past year been engaged in considering the clauses of the Medical Act, the effect of which has been to cement the

Digitized by Google

bond of union with the sister College. Another result of this Act was the application from the Apothecaries' Society to join the Conjoint Board. This application, which the Act required the Society to make before it could take any further steps to get its diploma recognised as a full legal qualification, was declined by the Colleges on the ground that their examinations, as at present framed, provided a complete qualification. Opinions differ both as to the wisdom of that reply and as to the effect it will have upon the Apothecaries' Society, as well as upon the profession at large; but this is not the place to discuss these controversial questions. Passing to the internal affairs of the College, it may be noted that certain proposals for delegating the duties of the Comitia to standing committees, brought forward by Dr. WEST, were rejected. The Croonian Trust Fund having been greatly augmented, the scope of its foundation has been enlarged, and made to include the appointment of lecturers on subjects of anatomy, physiology, and pathology, and the prosecution of scientific investigations on these subjects. By the bequest of the late Dr. GAVIN MILROY, the College became possessed of a sum of money to found a lectureship in State Medicine. Nor should mention be omitted of the fact that this year Sir W. JENNER was elected President for the sixth time a mark of confidence which the profession at large heartily endorsed. The Harveian Oration was delivered by Dr. PAVY; the Bradshawe Lecture by Dr. DRESCHFELD, who chose for his address the subject of Diabetic Coma. The Lumleian Lectures by Dr. STONE dealt with the somewhat recondite subject of the Electrical Conditions of the Human Body. The Croonian Lectures were given by Dr. LATHAM, on some Points in the Pathology of Rheumatism; and the Gulstonian Lectures by Dr. SHARKEY dealt ably with the subject of Spasm in Chronic Nerve Disease.

Royal College of Surgeons.

Probably at no other period of its existence has the Royal College of Surgeons been so active as during the past year. Whether we understand the term "College" to signify the Council or the whole body corporate, the year which is just past will be memorable in its annals. The alliance entered into between this College and the Royal College of Physicians is significant of the times, and of a great change in the policy of the latter College especially, seeing that their licence included both medicine and surgery, and qualified for general practice, as well as for Poor-law and other appointments. The gain is therefore largely a one-sided one. On the other hand, a much larger number of candidates will henceforth seek the combined diploma, and so equalise matters. Moreover, the union effected will strengthen both Colleges, and can hardly fail to raise the status both of licences and of licensees. The two Colleges decided to build an Examination Hall suitable for the increased numbers of candidates which are expected; accordingly plans were prepared for a building capable of accommodating not less than 600 candidates at one time. After being approved by the joint committee of the two Colleges, and also by the Duchy of Lancaster, on whose freehold the hall is being built, the foundation stone was laid with great pomp by Her Majesty the QUEEN on March 24th. Since this date great progress has been made, and it is hoped that the hall will be ready early in the new year. Acting in accordance with the recommendation of the Committee of Delegates of the two Colleges, the Council of the College of Surgeons have practically accepted the principle that it is desirable that degrees in medicine be conferred on candidates who have passed the conjoint examinations. The event, perhaps, of next greatest interest aud importance that has occurred during the past year is the coming into possession by the College of money bequeathed by the late Sir ERASMUS WILSON—upwards of a quarter of a million sterling. We say "coming into possession": in reality, we believe, the College has no right to hold so much money, and will have to acquire that right by new charter. The importance of this wealth can hardly be over-estimated; if appropriately used, the College of Surgeons will be able to promote the science and study of surgery in a manner never before attempted in this country. The question of internal reform, however, is the one which has attracted most attention during the past year, and which has been urged on the Council with great force, with great persistency, and with equal moderation. To judge by the circular recently issued to the Fellows at large with a view to elicit their opinion on the two prominent questions of reform, we fear the Council, notwithstanding some show of concession, are as resolutely opposed to any change as when the agitation first began some years ago, and the Members themselves will probably have to petition Her Majesty for a new Charter and for a restitution of those privileges of membership which have gradually been withdrawn from them. How this has been done is briefly set forth in some articles we published on Oct. 30th and Dec. 11th, and in a letter of the latter date from an esteemed correspondent, "Historicus." A study of these articles is urged on every Member of the College. Here he will learn how the present College began, how it was originally constituted, the purposes it had to serve, and how the *status quo* (which deprives Members of all voice in College management) is a flagrant breach of the fundamental principle of corporation. The annual meeting of the Fellows and Members was largely attended, and some important resolutions, jointly agreed upon by the two Associations of Fellows and of Members respectively, were brought forward, discussed with great ability, and carried. These resolutions, demanding on behalf of Members of the College of a certain standing corporate rights, were practically a reiteration of similar demands which have been previously urged on the Council at different times. An important feature at this meeting was the great unanimity of both the Fellows and Members on the question of reform. Mr. TIMOTHY HOLMES, formerly a member of the Council, acted as the mouthpiece of the two Associations. And here the matter rests for the present.

Army, Navy, and Indian Medical Services.

The past year has not been marked by any important change in these branches of the public service. The supply of candidates has been such as to indicate that they are still considered desirable outlets for the young men who are joining the profession. There are, however, some matters deserving the careful consideration of the authorities if they wish to maintain this feeling. The first of these is the removal of the just ground of complaint on the part of the

Digitized by Google

surgeons on probation for the army that their commissions are dated from the conclusion of the course of instruction at Netley, while those for the Indian service bear the date of their joining there. This is so obviously unjust that we hope it is only necesary to bring it under the notice of the Secretary of State for War to have it rectified. Unless this is done we fear the existing practice will seriously affect the supply of candidates for that branch. Another matter which calls loudly for redress is the position of brigade-surgeons in India, for although nominally recognised, they are denied the advantages of pay and allowances which ought in justice to attach to the rank. The position of medical officers in India, and the duties they are all called upon to perform, have been so modified by the introduction of the station hospital system in lieu of the regimental, that the whole question of their pay and allowances appears to require revision, and we trust that it may meet with early attention on the part of the authorities. There is still another point which merits the consideration of the Secretary of State for War—the system of conferring rewards and honours upon medical officers. The present system, by which the recommendation for rewards is almost exclusively in the hands of the military officers, while the head of the medical department is practically ignored in the selection, and his recommendations, when he thinks fit to make any, are too often set aside, is most unsatisfactory. We have so recently brought to notice this want of recognition of meritorious professional services that we think it unnecessary to say more than that we sincerely hope we may be able in our 'Annus Medicus for 1887" to announce that some more equitable system has been adopted, and that professional merit will no longer be left unnoticed and unrewarded in the medical branches of the public service.

The Medical Council.

The Medical Council met twice in the course of the year 1886. First on Tuesday, June 1st. The session lasted till Thursday, June 10th inclusive. The principal occupation of the Council during this sitting was the discussion of the reports of the visitors of all the Universities, or rather of their final examinations for medical degrees. These visitations cost the sum of £2256 9*s.* 2*d.*, or about twice as much as the visitations of corporations. The criticisms of University examinations were fairly faithful and satisfactory. The unsatisfactory part of it was that by the terms of the instructions given them the Visitors were restricted to ascertaining that the examinations were a test of mere *competence* to practise, instead of being required to see whether University examinations as such were fixed at a higher standard than those of corporations. The Council at the June meeting also resolved to institute a visitation of medical *schools*, subject to the permission of schools. The Council again met, very inconveniently, on Tuesday, November 16th, in the middle of the election of direct representatives under the new Medical Act, of which we shall have immediately to speak. They sat for five days. At this meeting little of importance was done, save to purge the Registers of two or three names. The only motion of any consequence discussed was one by Dr. MCVAIL, seconded by Dr. BANKS of Liverpool, to extend the term of medical education by one year, or rather to make five years compulsory if the subjects of Elementary Physics, Chemistry, and Biology are to be included in the period of medical study. An almost identical resolution had been passed the previous year, but had not been carried out. The Chairman put this resolution in a somewhat technical way, in supposed imitation of the forms of the House of Commons. The Council got into a terrible fog from which it never clearly emerged, though the resolution was declared carried by 10 to 3.

This may be considered a convenient place for noticing the passing of a Medical Bill to be known as the Medical Act, 1886. This Bill passed through its final stages in June. It is noticeable that, though the Medical Council sat in the middle of the progress of the measure through Parliament, it took no action in the matter. There was, indeed, on its part and on that of the medical authorities, a sort of conspiracy of silence to let it pass, no doubt in the belief that it affected their individual interests less than any measure could be expected to do. The silence of the Medical Council was the more questionable as it was contrary to its practice in regard to similar Bills, and the Bill, as the President of the Council has since pointed out has left the great reform unaccomplished—viz., a consolidation of the licensing authorities. It remains to be seen whether we shall not have a greater development than ever of competition of the licensing bodies, though under somewhat altered and veiled forms Another reason why the Medical Council should have been more concerned to give its opinion on the Bill than on former occasions is to be found in the free way in which the Privy Council is required to co-operate with the Council, and in some cases to override its decisions. We were the sole objectors to this feature of the Bill, and have to acknowledge the courtesy and consideration of the Government in the matter. Under the Act one good point has been gained—the admission of direct representatives of the profession to the Council. As the Bill was originally drawn by Sir LYON PLAYFAIR, two representatives were given to England, and one respectively to Ireland and Scotland. By the hearty efforts of Sir WALTER FOSTER a third representative for England was obtained, Sir LYON graciously giving up one of the Crown seats for the purpose. There is one other good feature of the Bill. It requires that the Medical Council shall appoint inspectors of the examinations. This provision, it may be hoped, will secure, at little more cost than that of the present system of visitations, a more regular and systematic report of the methods and work of our examining authorities than we have hitherto had. A serious feature of the new Medical Act is the provision for registering foreign and colonial degrees under certain important conditions. Under this Act the first election of Direct Representatives took place in November. The event is so recent that we need not trouble our readers with the particulars further than to record that after an election conducted on the whole quietly and in good humour, the following gentlemen were declared to be duly elected—viz.:

For England:
Mr. CLAUDIUS GALEN WHEELHOUSE, F.R.C.S.Eng., Leeds.
Sir B. WALTER FOSTER, M.D., F.R.C.P.L., Birmingham.
JAMES GREY GLOVER, M.D. Edin., London.
For Scotland: WILLIAM BRUCE, M.D. Edin., Dingwall.
For Ireland: Dr. GEORGE KIDD, F.R.C.S.I.

There is little else than the Medical Act in the work of

Digitized by Google

our Legislature to record, if we except the repeal of the Contagious Diseases Act on the motion of Mr. STANSFELD.

The Medical Societies.

There have not been any striking changes in the work of the Medical Societies during the year now ending. Everyone regards the regular clinical meetings of the London Medical Society as far more interesting than the mere reading of papers, and this method of bringing members together is one to be recommended even more extensively. The interest is greater when living specimens of disease can be examined in a profession where the oldest is not too old to learn, and it is certain that practical demonstrations are more truly instructive than any amount of language, however graphic. We have only space enough to indicate the chief contributions that have been communicated to the various Societies, London and provincial: The Lettsomian Lectures on Some Moot Points in the Natural History of Syphilis, by Mr. JONATHAN HUTCHINSON, F.R.S. Diseases of Bones and Joints in Animals, by Mr. BLAND SUTTON. Spontaneous Fracture of Urinary Calculi, by Mr. S. G. SHATTOCK. Diffuse Sclerosis of Brain in an Infant, by Dr. ASHBY. The Surgery of the Suakim Expedition, by Mr. TOBIN, at the Academy of Medicine in Ireland. Mortality in the Medical Profession, by Dr. WILLIAM OGLE. Dr. OGLE showed the excessive Mortality of Medical Men from Epidemic Diseases, excepting Small-pox, from which they have the sense to protect themselves; also from Gout, Diseases of the Liver Urinary Diseases, &c. (an abstract of this paper will be found in THE LANCET of Jan. 30th). Intracranial Tumours, by various authors, at the Pathological Society. Papers on Pemphigus (?) of the Conjunctiva, by Dr. BRAILEY and Mr. LANG Mr. NETTLESHIP's paper on Meningitis after Excision of the Eyeball. Dr. HERMAN's communication to the Obstetrical Society on the Production of the Shape of the Oblique Pelvis of NAEGELE. Subperiosteal Resection for Acute Necrosis, by Mr. BERNARD PITTS. Enteric Fever at Suakim, by Dr. J. E. SQUIRE. Mr. ARTHUR BENSON's paper at the Irish Academy on Embolism of Retina and Chorea. Dr. TYSON's cases of Universal Alopecia at the Clinical Society. Dr. HALE WHITE's paper on "Hysterical" Pyrexia. Dr. ROBERT MAGUIRE's communication on Dystrophy of the Thumb-joints. Dr. CAYLEY's on Thoracic Aneurysm treated by the Introduction of Steel Wire into the Sac. A paper on Ovarian Displacements at the Irish Academy, by Dr. MORE MADDEN. Mr. B. POLLARD's specimen of Villous Tumour of the Accessory Thyroid. Mr. SHATTOCK's paper on Bilateral Cystic Disease of the Kidneys in the New-born. Papers on Aneurysm at the Clinical Society, by Mr. MANSELL MOULLIN and Mr. CHARTERS SYMONDS. Dr. GOODHART's case of Intussusception of the upper part of the Jejunum. Mr. BARKER's case of Acute Intestinal Obstruction treated successfully by Abdominal Section. Dr. PERCY KIDD's specimen of Diffused Symmetrical Cirrhosis of the Lungs. Dr. MACLAREN's case of Hernia Cerebri treated by Silver Plate closing the Opening in the Skull. Drs. WHIPHAM and MYERS' paper on the Nervous Sequelæ of Small-pox. The report of a committee of the Ophthalmological Society on Sympathetic Ophthalmia. Dr. BRISTOWE's case of Cerebral Hæmorrhage and Double Optic Neuritis. Dr. THEODORE WILLIAMS and Mr. R. J. GODLEE's paper on Bronchiectasis treated by Paracentesis. Mr. PEARCE GOULD's case of Alveolar Abscess with Thrombosis of the Cavernous Sinus. Papers and discussion at the Royal Medical and Chirurgical Society on Suprapubic Lithotomy, by Mr. BARWELL, Mr. JACOBSON, Mr. W. RIVINGTON, and Sir H. THOMPSON. Tubercular Ulceration of the Palate, by Mr. CLUTTON, and also by Dr. ABERCROMBIE and Dr. GAY. Mr. MEREDITH's paper on Successful Laparotomy for the relief of Acute Intestinal Obstruction following Ovariotomy. Dr. STEPHEN MACKENZIE's paper on Erythema Nodosum and Rheumatism. Dr. MATTHEWS DUNCAN's paper on Contraction, Inhibition, and Expansion of the Uterus. Dr. CLIFFORD ALLBUTT's suggestive paper on the Mountain Cure in Heart Disease at the Leeds and West Riding Society. Dr. CHAMPNEYS' paper on the Development of Mammary Functions of the Skin of Lying-in Women. Dr. F. W. MOTT's specimen of Malignant Melanotic Growth of the Lip. Mr. BALLANCE and Mr. W. EDMUNDS' most valuable paper on the Ligature of Larger Arteries in their Continuity. The various communications on Exophthalmic Goitre to the Ophthalmological Society. Many papers on Adenoma of the Palate, by Mr. HUTCHINSON, Mr. STEPHEN PAGET, and Mr. F. TREVES. Dr. A. MONEY's paper on Delirium and Fever in Pneumonia. Mr. BRUCE CLARKE and Dr. STEAVENSON's paper on Electrical Treatment of Urethral Stricture. Dr. ZEHENDER'S Bowman Lecture. Dr. HAMILTON's Complete Sections of Brain. Mr. F. TREVES' specimens of Malignant Cysts of the Neck. Mr. KNOWSLEY THORNTON's paper on 300 Complete Cases of Ovariotomy. Mr. CHARTERS SYMONDS' case of Removal of Scapula for Osteo-sarcoma. Dr. COUPLAND's paper on Ophthalmoplegia dependent on Thrombosis of Cavernous Sinuses. Dr. SHERRINGTON's specimens of the Ascending Antero-lateral Tract in the Embryo. Dr. BARLOW's case of Disseminated Myelitis and Measles. Dr. A. H. N. LEWERS' paper on Spontaneous Uterine Rupture. Dr. SEMON's, Mr. BUTLIN's, and Mr. MORRIS's papers on Extirpation of the Larynx for Epithelioma. Dr. HUGHLINGS JACKSON's rare case of Epilepsy like that of epilepsy in guinea-pigs. The Obstetrics of the Kyphotic Pelvis, by Dr. CHAMPNEYS. Dr. DRESCHFELD's and Dr. PAYNE's papers on Rhinoscleroma and Granuloma Fungoides. Mr. LANGTON and Mr. BOWLBY's paper on Embolic Aneurysms. Mr. HERBERT ALLINGHAM's new method of Excision or Erasion of Knee-joint. Dr. CROOKSHANK's specimens of Flagellated Organisms in the Blood of Healthy and Diseased Rats.

Medical Associations.

The meeting of the British Medical Association at Brighton was, in a medical respect, a great success. The attendance was good, and many of the addresses were of great interest. That of the President, Dr. WITHERS MOORE, was devoted to a consideration of the function of women, especially as regards Higher Education and Professional Pursuits. Dr. MOORE developed with great ability the argument that the great function of woman was to be the mother of good men, and that any departure from this line of duty was to be regarded with regret and doubt. His views supplied material for discussion of this great question for many days. Sir ANDREW CLARK's Address on Cases in which

Digitized by Google

Disease of the Valves of the Heart has been known to exist for upwards of five years without serious symptoms, was a masterly and compact statement of a marvellous clinical experience, and very comforting to people with weak hearts. Other addresses of consequence were those of Dr. BILLINGS on the state of Medical Education in the United States, and of State Law as it affects Medicine as a Science and a Profession, Sir HENRY THOMPSON on Supra-pubic Lithotomy, Dr. BARNES on the Alternatives of Craniotomy, Dr. JULIUS DRESCHFELD on Pathology, Dr. ROSS on Peripheral Neuritis, Dr. LAUDER BRUNTON on Therapeutics, &c. With a view to the approaching election of Direct Representatives under the Medical Act, a proposal was made, at a general meeting, to instruct the Council to select three names of gentlemen and submit them to a future general meeting during the session. Dr. EYTON JONES, Dr. HUGH KER, Dr. DOLAN, Mr. MORRIS, Dr. BERNARD O'CONNOR, and others spoke; and finally it was agreed that the Association, as such, should take no action in the matter.

The Sanitary Institute of Great Britain met at York, and had the advantage of being presided over by Sir SPENCER T. WELLS, who, like most great surgeons, is much interested in the principles of sanitation, and has done much to enforce and apply them. In his address Sir SPENCER took a broad and statesmanlike view of the subject. He lamented the impotence of Parliament and its preoccupation with less practical and more sensational topics; but he descanted with much satisfaction on what had been achieved in the improvement of the people and the lengthening of the average of human life by almost twenty years in the last half century.

The proceedings of the Meeting of German Naturalists and Medical Men in Berlin were reported in abstract in our columns in October. At such meetings in Germany there is much more specialism and a greater number of sections than in England. Professor VIRCHOW, in an introductory address, alluded to the close connexion between the natural sciences and medicine, and observed that this connexion was much more recognised in Germany than with us.

Medical Jurisprudence.

The year that is just passing away has been signalised by one medico-legal case of surpassing interest. We refer to the charge brought against Mrs. BARTLETT and the Rev. GEORGE DYSON for the murder of Mr. BARTLETT by administering a fatal dose of liquid chloroform. The Crown prosecution withdrew the indictment drawn against Mr. DYSON, and the jury found Mrs. BARTLETT "Not guilty." There could be no doubt that deceased succumbed to the effects of liquid chloroform taken into the stomach, but it remains a mystery how this came about. In a leading article on the forensic bearings of the case we directed attention to the difficulty of surreptitiously giving chloroform vapour to a sleeping person, and we took exception to the theory that the cause of death from swallowing pure chloroform was mainly irritation of the stomach, contending that the shock from the irritant would be minimised by the stupor from the narcotic. Several other interesting cases of poison—and some of them curious and rare—have been recorded in our pages. A young woman named HUNT succumbed to the lethal effects of phosphorus, but the jury were unable to determine how the poison was administered. The motive appeared to arise from the fact that she was *enceinte*, but whether this worked through a suicidal or homicidal groove has not been ascertained. Perhaps the most curious—and curious mainly because it was equivocal—instance of supposed poisoning was that which occurred at Hackney, and was investigated toxicologically by Dr. TIDY. This jurist obtained an extract from the contents of the stomach like that derived from KEATING'S insect destroyer; the powder in question, however, failed in a three-ounce dose to kill a rabbit. At Clerkenwell a man was poisoned by carbonic anhydride whilst working in a disused well; and at about the same time a calamitous event happened near Glasgow, several persons losing their lives by the after-damp succeeding a huge explosion. Wild flowers of undetermined nature proved fatal to a child. A suspicious case of poisoning by wood sorrel was explained by us as probably due to the drinking of soap lees. Just recently a child aged two years and a half died in convulsions after eating sixty grains of camphor.

Turning now from the account of poisons, we must mention briefly the circumstances of a trial for murder, in which W. TURNBULL, a medical man, and MARY NOTTAGE, a certificated midwife, were charged with having procured abortion on a single woman named CLIFFORD. The prisoners were convicted of "unskilful treatment and criminal negligence," and were sentenced respectively to ten years' penal servitude and eighteen months' hard labour. The post-mortem phenomena observed in this and a similar case formed the basis of an article by us on the value of the corpus luteum as a sign of previous pregnancy.

A distressing case of death from rupture of the uterus during labour was brought to light at an inquest at Brighouse. The midwife in attendance was supposed to have acted injudiciously in making traction on a leg in a breech presentation, and so inadvertently causing the rupture. The evidence failed, however, to sustain the suspicion, and the jury returned an open verdict as to how the uterus was rent.

At an assize trial on the civil side, a dentist was sued for damages for the seduction and consequent impregnation of a female during the sleep of the latter. The jury disagreed. We took occasion to point out that unconscious impregnation was consistent with physiological laws.

As regards the value of post-mortem examinations, numerous occasions have presented themselves to illustrate and enforce our oft-repeated contention that in all cases where the cause of death is doubtful a necropsy should be made. Mr. Justice STEPHEN laid stress on the desirability—nay, necessity—of this being done whenever the death was the subject of a criminal charge. On one occasion a juryman, much to his credit and to the furtherance of justice, declined to sign an inquest form unless he heard medical evidence as to the cause of death. At Hull an inquiry into a supposed case of "irritant poisoning" was completed by the post-mortem examination revealing peritonitis from acute inflammation of the ovary.

"Impulsive homicide" has again elicited public and professional notice, notably by reason of two trials which occurred at the late Western Assizes. These were rendered still more prominent by the animadversions passed by

Digitized by Google

Mr. Justice HUDDLESTON on medical witnesses—strictures which we felt compelled to challenge and resent.

A curious case of mistaken identity transpired at an inquest, where the subject of inquiry, though sworn to as dead, appeared in person to prove the contrary. The deceased and his counterfeit both had a peculiarity of the same finger of the same hand.

Public Health.

On the whole, the year 1886 has been a healthy one in so far as England and Wales are concerned, and there is every reason to believe that the general death-rate will indicate a distinct diminution as compared with the average for the preceding ten years. The decrease in the rate from the zymotic class of diseases was very marked during the first half of the year, and it was only an excessive prevalence of fatal diarrhœa during the third quarter that brought that rate at all near to the previous average. During that quarter the mean temperature was 1·5° above the average for the corresponding periods of 115 years, the largest excess occurring in September; the rainfall was also 2·46 inches below the average amounts in the corresponding periods of seventy-one years; and these are conditions with which excess of diarrhœa amongst infants has always shown itself in those localities with which the prevalence of this fatal malady is identified. The total diarrhœa deaths were 15,936 in number, corresponding with an annual rate of 2·27 per 1000, as opposed to a mean rate of 1·84 in the ten preceding third quarters; the highest local rates reaching 5·36 in Salford, 5·49 in Preston, 6·23 in Leicester, and 8·24 in Norwich. The study of this disease, especially as regards its etiology, is still being carried on by Dr. BALLARD on behalf of the Local Government Board, but since the principal opportunities for study are of such short duration and at such long intervals, some time must probably elapse before any definite views on the subject can be formulated. But, quite apart from this autumnal diarrhœa, we are from time to time learning of specially localised epidemics which appear to be due to the use of certain articles of food and drink. Water has been the means of producing the most widely-spread of these epidemics, and the latest record we have on this subject relates to an epidemic which suddenly attacked some 20,000 of the inhabitants of Hull in March, 1885, the epidemic being associated with a temporary and accidental pollution of the public water-service. The recurrence of these epidemics indicates more than ever the imperative necessity of placing all such services under maintained and skilled supervision. Small-pox, fever, and scarlet fever all show diminished death-rates, and, except in so far as the change may be affected by an improved diagnosis and differentiation between scarlet fever and diphtheria, it is satisfactory to observe that a steady diminution has for some time past been in progress in the deaths from the former of these two diseases. Diphtheria, on the contrary, has shown a tendency to increase, and the increase has for some years past exceeded anything that can be accounted for by reason of improved nomenclature. So far, however, although there is no diminution in the diphtheria fatality, the increase that has heretofore been in progress has not been further added to this year.

The recurrence of cholera on the continent of Europe has naturally occupied much of the attention of the Local Government Board and of the local sanitary authorities; and the general survey of districts running special risk, whether by reason of their position on the coast line or by reason of known or suspected sanitary defects, has been of extreme value. The Local Government Board, having selected a staff of their most experienced medical inspectors for the purpose, have by local counsel and correspondence indicated in several hundred sanitary districts where the weak points existed which could favour a cholera spread, and we have reason to believe that the interference and personal advice which have been such prominent features in this survey have, in by far the majority of instances, been appreciated by local sanitary bodies. The issue of Dr. BUCHANAN'S recent cholera report showed that some authorities preferred a mistaken economy to the improvement of the health of their districts. With them must be left the responsibility of failing to secure for their inhabitants the sanitary conditions best calculated to prevent the spread of disease. Such bodies will, at least, be unable to complain hat they were not made acquainted with the principles which govern the action taken in this country for the prevention of cholera, and which relate essentially to the removal of filth in all its forms and to the provision of means of isolation for those who are actually sick.

From time to time we have indicated the course of cholera in Europe during the present year. The fact of the disease being maintained during a portion of last winter in certain parts of Spain and in the north of France did not lead to any further extension of the disease in those two countries, both of which had suffered severely in 1884 and 1885. Italy was less fortunate. Throughout the early part of this year the disease was more or less prevalent in Venetia. It gradually extended to the provinces bordering on and to the south of the mouths of the Po, and it ultimately extended over a wide area in the north-eastern portion of the peninsula. Whilst this extension was in progress the disease appeared at Brindisi and Bari in the south, and from these places it spread to a large number of towns and villages near the Adriatic coast, and to others inland. The total number of attacks and deaths in Italy has not yet been officially certified, but from the commencement of the renewed epidemic early in the year to the end of September, when a considerable fatality was still in progress, the persons attacked had probably not been less than 50,000 in number, and amongst them there had since been some 15,000 deaths. When cholera was first prevalent in the neighbourhood of Venice, it spread inland and also extended to Trieste, the disease being maintained at the latter port and in its vicinity throughout the greater portion of the year. The whole province of Istria soon became infected, and extension of the disease took place in the direction of Croatia. Later on it became evident that villages in the southern part of Hungary were affected; then Pesth (the eastern portion of the capital) became for a time the seat of the epidemic; and at a still later date Galicia to the north and certain towns and villages to the south of Hungary became implicated. At the present date rumours are renewed as to the existence of cholera in several parts of Eastern Europe, and in all probability the greatest danger for the coming year will lie in this direction.

Digitized by Google

The large amount of attention that has been this year devoted to perfecting our sanitary condition in view of the possible extension of cholera to this country has gone to diminish the amount of current work in the investigation of epidemic disease at home. But, even if this year's labours had been limited to a single piece of work, we should still be able to regard it as marking an epoch in our sanitary history in view of the proof that has at last been afforded as to the relation of a disease in the cow to scarlet fever in the human subject. Mr. POWER'S reports to the Local Government Board have at several intervals foreshadowed the possibility of the existence of such a relation, and his recent admirable piece of work, as embodied in his report and that of Dr. KLEIN on Milk Scarlatina in London, must be regarded as affording the proof hitherto needed, and as opening up a comparatively new and wide field for further scientific investigation. The sanitary legislation of the year has been but small in amount, and the only Act to which it is necessary to draw attention is the Contagious Diseases (Animals) Act, 1886, which definitely transfers powers as to dairies, milkshops, &c., to the sanitary authorities, who heretofore had no proper means of controlling establishments which may become potent for mischief as regards the public health.

Hospital Mirror.

In the Mirror of Hospital Practice during the past year cases from most of the departments of medical practice have been brought forward—many of them interesting from the rarity of the disease, and some on account of an unusual manifestation of symptoms or rare complication obscuring the diagnosis and rendering it difficult for the carrying out of skilled and successful treatment. Amongst others may be mentioned the following:—A fatal case of hydrophobia, hyperpyrexia in the course of acute rheumatism, enteric fever fatal on the seventieth day from perforation, unusual symptoms in connexion with locomotor ataxy, chorea associated with epilepsy, chorea gravidarum, tropical and other abscesses of the liver, and a series of cases of pyæmia. Contributions to toxicology include recovery after poisoning by oxalic acid (half an ounce), followed by acute nephritis, hydrochloric acid (one and a half ounce), liquid chloroform (two ounces), cyanide of potassium (40 grains), and one by phosphorus paste, fatal on the fifteenth day; also an account of the sufferers from the effects of the gases following the disastrous explosion at Crarae. Injuries to the skull and its contents have been several times brought before our readers, and the advantages of the present methods of treatment exemplified by the success which has attended the efforts of the surgeon; bullet wounds and compound fractures of the vault, with in some cases damage to the brain, requiring the use of the trephine or elevator; fractures of the base associated with multiple fractures of the bones of the face and others, as also a fatal case of trephining for traumatic epilepsy; and two cases of tetanus successfully treated, one by the excision of cicatrix, the other by chloral hydrate. Functional disease of the heart, aortic regurgitation, ulcerative endocarditis; several examples of aneurysm, with the ligature of arteries, the femorals, common iliac, and two cases of simultaneous ligature of the common carotid and subclavian; traumatic aneurysm of the gluteal; hæmorrhage from post-scarlatinal ulceration; and a case of hæmophilia, with the pedigree for five generations. In connexion with the digestive system: excision of the whole of the tongue for epithelioma, and of portions for tubercular ulceration; perforating ulcer of the duodenum; intestinal obstruction from fæcal accumulation; stricture of the rectum, simple and malignant (in one case simple stricture caused a complete block for two months); volvulus and acute intussusception, with the treatment in each. Examples of the treatment of the principal varieties of strangulated hernia by the improved method of excision of the sac, often combined with suture of the ring after reduction of the gut; also cases in which hernia was simulated by other diseases. Œsophagotomy for the removal of a tooth-plate; gastrostomy for malignant stricture of the œsophagus; the formation of an artificial anus where new growth obstructed the rectum, either by LITTRÉ'S or AMUSSAT'S operation; and the exploration of the gall-bladder for stone (when unusual conditions were found and the gall-bladder was removed); and this week we publish notes of a rare case of fatal general emphysema, due to perforation of the wall of the œsophagus. Accounts will be found illustrating the treatment of diseases of the generative organs in the female; operations for the removal of cyst, of the ovaries and broad ligaments, of hydro- and pyosalpinx and myo-fibromata of the uterus; hydramnios; pregnancy complicated by occluded vagina, by albuminuria, and by chorea and successful operation for extra-uterine fœtation. The revival of the operation of supra-pubic cystotomy has led to increased activity in the treatment of vesical disease, and cases are recorded of its employment in children for the removal of stone, and in the adult (with perineal incision) for the removal of tumour from the bladder. Other methods for removal of calculi and foreign bodies from this organ, and the treatment of stricture of the urethra, in one case by permanent supra-pubic drainage, and its rupture, also receive illustration. Three cases of rupture of the bladder, two intra-peritoneal, terminating fatally, and one into the vagina, with other severe injuries, treated successfully, are recorded, and a case of exploration of the kidney, and its incision for abscess or for the removal of a stone. Conservative surgery has been well exemplified in the record of compound fractures of the humerus, femur, patella, and astragalus, the ultimate result in the saving of life and a useful limb having been most satisfactory; dislocation of the knee; the removal of loose cartilages in a patient over eighty years of age; the course and treatment of cysts in connexion with this joint; excision of the elbow-joint and of the hip-joint; amputation at the hip, followed by recovery; diseases of the bones, acute and chronic, in one extensive removal of tarsal bones leaving a useful foot; new growths affecting the neck, jaw, inguinal region, vagina, popliteal nerve, and skeleton, including one of the femur, recovery following amputation at the hip-joint; excision of cyst of the thyroid and of the thyroid itself; penetrating wound of the abdomen, the wound being enlarged for diagnostic purposes; wound of the neck penetrating the air-passages, in which suture of the air-tube was practised. Also cases from more special departments—diseases of the eye, throat, and of the skin.

Commissions.

One of the most useful pieces of work undertaken during the year was that which related to the pollution of the Thames at the Henley Regatta. Our Commissioner visited the river at the time the regatta was held, and, as the result of his inspection, publicity was given in our columns to the abundant opportunity for river pollution afforded by the numerous house-boats which are brought together on this occasion. The majority of these boats have closets on board which drain directly into the water. Direct drainage of houses into the Thames is prohibited, but the river receives from house-boats large quantities of matter of the same character as that which is forbidden from other sources. But this is not all; the whole of the animal and vegetable refuse and the débris of the kitchen is thrown into the water, and thus the Thames, which supplies many of the inhabitants of the metropolis with drinking-water, is periodically polluted to a serious extent, and is liable to become contaminated in a manner which would not only affect the health but even the lives of those who depend upon it for their water-supply. It was time that the attention of the responsible authorities was directed to this danger, and it may be hoped that the steps which are now being taken by the Thames Conservancy Board as the result of our report will be the means of preventing a grave calamity in the future. Our Commissioner has shown the need for a systematic scavenging and for the punishment of all persons who may, in their disposal of animal and vegetable refuse, pollute the water of the Thames. It is by the enforcement of these measures only that safety can be ensured.

The sanitary condition of Windsor, to which we had given much prominence during the previous year, again came under our notice owing to an outbreak of small-pox in those parts of the town which had been the subject of previous articles. The freedom of any community from this disease is doubtless dependent in the first instance upon the condition of the vaccination of the inhabitants, but there is much reason for believing that other conditions—such as overcrowding and absence of means of isolation—are important factors in leading to the dissemination of this disease, and Windsor appeared to afford special facilities in these directions for its propagation. At the present moment the reports of our Commissioners have led to an official inquiry by the Local Government Board into the sanitary condition of the borough, and as to its defences against infectious disease. We forbear, therefore, to discuss this matter more fully, but we shall rejoice to see effective measures put in force for making Windsor fit in every sense of the word to be a home for the QUEEN, and for those of her subjects who dwell in the neighbourhood of her castle.

A serious outbreak of measles at Marlborough College gave origin to a special report from one of our Commissioners. A similar inquiry was made a number of years ago, and the condition of the College at that time was fully considered. It was convenient therefore to learn how far the school authorities had kept pace with the requirements of more recent knowledge, and it was with pleasure we were able to report that they had to a large extent been mindful of the health of the boys. Nevertheless, certain defects were found which demanded remedy, and these, we are now glad to be able to say, have since received the careful attention of the governing body. All that we would desire to see done is not yet fully completed, but we willingly acknowledge the consideration which has been given to our Commissioner's report.

Another of our Commissioners in the course of the summer visited Leicester, with a view to ascertain whether the immunity of that town from small-pox is really as independent of vaccination as some would have us believe. He demonstrated, on the contrary, that the opposite is the case; that all the officials who have to deal directly with the small-pox of Leicester are vaccinated and revaccinated, and that very strong pressure is applied to all persons around those affected with actual small-pox to be revaccinated, and that apart from this prime precaution all other measures would be mere mockery.

Medical Honours.

The honour of knighthood has during the past year been conferred upon WILLIAM TURNER, M.B., DYCE DUCKWORTH, M.D., and B. W. FOSTER, M.D., and was offered to, but declined, by Mr. SAVORY, President of the Royal College of Surgeons, on the occasion of laying the foundation stone of the new Examination Hall on the Embankment; also upon Surgeon-General T. LONGMORE, Dr. E. H. SIEVEKING, the late Mr. W. WHITE COOPER, Dr. DOUGLAS MACLAGAN, and Mr. JOHN TOMES. Deputy Surgeon-General J. BY COLE READE, Brigade Surgeon GEORGE FARRELL, and Deputy Surgeon-General JOHN M'NEALE DONNELLY, M.D., were appointed members of the Third Class or Companions of the Order of the Bath; and ARTHUR MITCHELL, M.D., and WILLIAM ORANGE, M.D., were appointed members of the Civil Division of the Third Class of the said Order. Surgeon-General MICHAEL CUMMORE FURNELL, Deputy Surgeon-General ALEXANDER MORISON DALLAS, GEORGE WATT, M.D., and JOHN W. TYLER, M.D., were appointed Companions of the Order of the Indian Empire. Deputy Surgeon-General STEWART AARON LITHGOW was appointed a Companion of the Distinguished Service Order.

Obituary.

The painful part of the retrospect of a year is that which recalls those who have been taken away. Few years have been more cruel in this respect than the year 1886. The following names will suffice to justify this charge. They are taken from all branches of practice and all parts of the empire:—Mr. JOHN BLACKETT JEAFFRESON, Dr. F. G. JULIUS, Mr. WILLIAM BOUSFIELD PAGE, Dr. JAMES BALLS WOOLBY, Dr. R. ROBERTS MADDEN, Dr. ANGUS MACDONALD, Dr. GAVIN MILROY, Mr. COOPER FORSTER, Dr. JOHN STORRAR, Mr. C. LE VESCOMTE GODFRAY, Mr. JOHN S. STREATFIELD, Dr. E. O. P. CHARD, Dr. EVORY KENNEDY (Dublin), Dr. JOHN MATTHEWS, Dr. TIMOTHY LEWIS, Dr. SCOTT ORR (Glasgow), Dr. HENRY MACCORMAC (Belfast), Mr. FRANCIS MASON, Dr. JAMES APJOHN, Dr. WALTER MOXON, Mr. THOMAS WARD JESTON, Dr. ROBERT FOWLER, Dr. CHARLES CHADWICK, Mr. J. SAMPSON GAMGEE, Dr. SAMUEL WOODMAN, Mr. HIBBERT SULLIVAN PARKER (Ferozepore), Dr. J. PEARSON BELL, Dr. JOSEPH E. MILLER (Derry), Dr. FREDERIC JOHN FARRE, Dr. ARTHUR WYNN WILLIAMS, Dr. MORTIMER BALDING, Dr. NORMAN CHEVERS, Dr. WALTER FERGUS, Mr. W. A. N. CATTLIN, Dr. LYONS, and Dr. EBEN. WATSON. We dare not yield to the temptation to descant on

Digitized by Google

medical life and its labours and risks as exemplified in the foregoing names. They do not exhaust the list of losses which our great profession has sustained even in our own country. But how suggestive they are! Some of the above had completed their course. Dr. MADDEN of Dublin, a great friend of the slaves when in Jamaica, was eighty-eight years old. Dr. APJOHN, also of Dublin, was ninety-one. Mr. JESTON of Henley-on-Thames was ninety-six, and his biography says he retired from active work about two years before his death, thus conveying a gentle rebuke to the young men of this degenerate age who begin to think of retiring twenty years before this. The life and character of Dr. MACCORMAC of Belfast were among the most useful and interesting which we have recorded. The writer of the notice thought him at his death the oldest medical practitioner in Ireland, but we have since recorded the death of Dr. JOSEPH E. MILLER of Derry, which occurred in his ninety-fourth year. This remarkable man graduated in Edinburgh seventy-one years ago. He had been Mayor of Derry seven times, and had been in actual practice sixty-seven years! It is impossible to begrudge rest to those who have worked so long. We may be thankful that so many of the deaths recorded were at an age when life is practically over. But not a few have come all too soon, and removed those who promised fair to hold high the light of medicine for many a year to come. The death of Dr. AUSTIN FLINT must be mentioned as almost a domestic event, so familiar had become his face and work at home—from which, indeed, his ancestors went out.

The year has had a very special grief for ourselves in the death of Dr. JAMES G. WAKLEY, for more than twenty years Editor of this Journal, and under whose rule it attained to a more extended influence than it possessed even in the time of its founder. Dr. WAKLEY had a wide view of the functions of a Medical Journal, and thought Medicine a very large word in its meaning. It will be the part of those of his family who assume his responsibilities in the conduct of THE LANCET to be faithful to its traditions, and to remember the independence and courage in which it had its origin. The customary announcement on the title-page issued with this number is absent, in consequence of Dr. WAKLEY'S lamented death on the 30th August last; but we may here state that THE LANCET is now edited jointly by the present proprietors, THOMAS WAKLEY, F.R.C.S. Eng., and THOMAS WAKLEY, junior, L.R.C.P. Lond.

Next to Dr. WAKLEY'S interest in THE LANCET was the interest he felt in Hospitals, and especially in Hospital Sunday, of which he was a chief promoter. It was no little consolation to him to have assisted, as he was able, to raise the collection of this year to the sum of £40,000—a much larger figure than had before been realised.

Conclusion.

We must now leave our readers to the more cheerful duties of the season, with every wish for their happiness and prosperity. If our penultimate words have lessons of sadness in them, our last words shall be words of good cheer. Many a life has been spared to brighten the Christmas which but for the medical art would have been lost. Thousands are now alive who but for Medicine in some of its branches would have passed over to the majority. It is no mean distinction to belong to a profession which has such satisfactions, and whose services to humanity are ever growing in fruitfulness and beneficence.

Annotations.

"Ne quid nimis."

THE CONJOINT COLLEGES AND MEDICAL DEGREES.

IN our last week's issue we published the report of the Committee of Delegates appointed by the Royal College of Physicians of London and the Royal College of Surgeons of England "to consider the question of the desirablity and practicability of granting degrees in medicine and surgery to persons who have passed the conjoint examinations of the two Colleges." We think that all our readers will agree that the report is a forcible and judicious statement of the singularly anomalous position in which the London student is placed, and that the demand for its removal is put forward on a sound basis, and in a strong but temperate manner. The only points in the report to which exception could be taken are (1) that residence in London for the whole clinical curriculum is not insisted on; (2) that the powers of granting degrees should be given to the Colleges acting conjointly, without any extraneous governing body; and (3) that the examinations of the Colleges in the subjects of study comprised in their curriculum are on a level with those of the majority of the universities of the United Kingdom. On the 16th inst. the report of the delegates was presented to the governing bodies of the two Colleges for adoption. The Council of the Royal College of Surgeons made some verbal alterations, and then referred it back for the further consideration of the delegates. At the comitia of the Royal College of Physicians of London, where the graduates of the existing Universities are in full strength, an interesting debate took place, and was resumed on the 23rd inst. During the course of the debate Sir George Paget demurred to the statement of the delegates as to the equality of the examinations; but it was pointed out that, besides Cambridge, Oxford, and London, there were many other Universities holding medical examinations in the provinces, in Scotland, and in Ireland, and these examinations were fully weighed by the delegates before the statement was passed by them. Moreover, professional examinations only are referred to, and a proviso was inserted into the first resolution for the institution of "such examinations in arts and science as may hereafter be defined;" and it is in arts and science that the examination requirements of the Conjoint Examining Board are inferior to the average University standard. The President, Sir William Jenner, ruled that the College, by its action on the 22nd of October, 1885, was pledged to grant degrees, acting conjointly with the College of Surgeons; for it then accepted the amendment of Dr. Wilks, "That it is desirable that persons examined by the Royal College of Physicians of England and the Royal College of Surgeons of England conjointly, and found duly qualified, either by the ordinary or by an additional examination, should have a degree in medicine and surgery conferred upon them." From this decision the College could not go back. The only question that remains for settlement is the "how," and the line taken by those who object to the Colleges giving a degree is indicated in Dr. Allchin's amendment to the first and practically all-important resolution—viz., "That no scheme for conferring degrees in medicine and surgery upon candidates who have passed the examinations of the Examining Board in England shall be deemed satisfactory *unless it provide for the conferring of degrees by some university body outside the Colleges themselves*, but on which they could be represented." In October, 1885, Sir Risdon Bennett moved an amendment by which the College would have pledged itself to support to the utmost of its power the scheme for a teaching university in London, and it was lost by a large majority. Dr. Allchin's recent amendment seems to us only a transformation of this old one. Had it been passed, the College would have stultified

Digitized by Google

itself; its rejection has involved the College in a second and a fruitless debate on the same question. The postponement of the movement until a teaching university shall have been formed is impossible, for only the medical faculty—and that practically consists of the London teachers, well represented at both Colleges—has decided on its wants. Arts, science, and law, as distinct faculties, are non-existent—or shall we say *in nubibus*?—and must be composed in the two former faculties almost entirely of the professors and members of King's and University Colleges, and even these, *teste* Professor Lankester, do not too cordially assist in maturing a scheme which will embrace the proposals of those associated in promoting a teaching university. Eminent lawyers are conspicuously few. The basis on which the College degrees should be granted ought to be wide and academical, and powers should be carefully drawn up so that other faculties may join with and enlarge the new university; but to delay application for these powers through an amendment drawn up in behalf of a non-existent university, in whose support only about thirty members could be got together at the last meeting for its promotion, and many of those included in its executive, seems to us to be nothing less than simple obstruction.

We congratulate the Council of the Royal College of Surgeons of England and the Fellows of the Royal College of Physicians of London on having come to so speedy a decision in support of the movement for granting medical degrees to London students on terms similar to those on which they are obtained elsewhere. The disadvantages under which London teachers and those who study medicine in London have hitherto been placed are now in a fair way towards removal, and some progress can be reported. The next step will be an application to the Crown for powers to grant such degrees, and so a distinct advance towards the foundation of a new university in London will have been made. It remains with the teachers of science and arts to decide whether this is to be composed of one faculty or of more than one, and we recommend to their notice the business-like energy and promptitude which the combined Colleges have shown as an example which they might well imitate if they are to share in the movement.

THE MORAL OF THE DIFFICULTIES OF GUY'S.

THE meeting at the Mansion House to procure £100,000 for Guy's Hospital is a serious historical fact, and should be deeply pondered by all persons. All the speeches were good, but that of Cardinal Manning was the great statement of the case from the religious point of view. He was followed immediately by Mr. Leopold de Rothschild, and happily so; for this great duty rests with no religious community; it is enforced in no particular text, and is equally the burden of the Old Testament and the New; it binds both Jew and Christian, and he would almost be the better exponent of the principles of universal charity of the two who most showed that he felt the claims of hospitals to weigh upon his mind, forbidding him to enjoy rank or wealth till these are furnished with all that can lessen misery and heal disease. We may come at once to the solution of this great difficulty. It is very easy. It can only be done by great gifts; and these can only come out of great accumulations of wealth, such as philosophers condemn as bad for the State and bad for the individual, who is apt to get buried in them. No substantial relief will come to Guy's Hospital or to the other hospitals of London if Guy's generosity be not imitated. This sum is not to be raised in driblets, nor are the ever-accumulating debts of the unendowed hospitals to be so reduced. We want gifts like that of Guy's. We have been so stimulating of late years the art of getting money, and so glorifying those who keep what they get, that there is danger of soon having no hospitals available—a danger already realised by thousands of sick poor who ought to be in hospitals and are not. Is it not a most humbling fact that the poor of the south side of the Thames are dependent for their hospital accommodation mainly on a man who lived a hundred and fifty years ago, who kept a bookseller's shop, and who took his dinner off his counter covered with a newspaper for his tablecloth. Neither did he neglect or forget his friends, but within a fortnight of his death the hospital was open and sixty poor patients were resting on the beds which his kindness had provided. What a monument he has still! What a glory there is in such gifts, even as there was in the pagan world—"namque et titulis et fascibus olim major habebatur donandi gloria." There is no serious fault to find with the administration of Guy's Hospital, though if the public are to be asked to support it, the public must be admitted to the councils and the confidence of its authorities. We shall watch with some anxiety the result of the appeal of the Lord Mayor and his supporters. The times are critical for the great hospitals, and for the very system on which they exist. Wealth persists in increasing; if the *gloria donandi* increases with it, all will be well.

METROPOLITAN ASYLUMS BOARD.

AT their meeting on Saturday last the Metropolitan Asylums Board had again before them the question of building a permanent hospital at Darenth, the subject being brought under their consideration by various boards of guardians who had written protesting against the proposed expenditure. The chairman, Mr. Galsworthy, pointed out that the managers were not now seeking, as had been represented, to expend £84,000, but had adopted a resolution which did not specify any definite sum. Sir Edmund Currie made a final effort to induce the Board to depart from its previous decision, but without avail. We cannot but think that in these differences the managers are losing sight of the more important question of the planning and construction of the hospital. The desire of the Local Government Board that only temporary buildings should be erected can only mean that permanent buildings such as have been provided elsewhere have failed in their object, and that they are unwilling that the managers should incur the larger expenditure of a permanent hospital before a definite opinion has been formed as to the proper method of its construction. The Asylums Board at a later stage of the meeting adopted a report of their Ambulance Committee, which promises to confer a great benefit upon the metropolis. The ambulances of the managers are now limited in their use to the removal of infectious cases to their hospitals: they have now expressed their willingness, if the power be conferred upon them, to undertake the general removal of all such cases throughout the metropolis, whatever may be their destination. This is the only effectual method by which the use of public conveyances can be prevented, and the managers rightly point out that it would be then possible and necessary to constitute as an offence the use of any street cab for the removal of a person suffering from infectious disease.

THE LESSONS OF THE CAMPBELL CASE.

THERE is only one reflection to be made on the Campbell case which it seems worth while to offer for public consideration, at least at this conjuncture—namely, that the purity and consequent happiness of social life are not advanced by the law and custom which force these exposures of domestic infelicity on public attention. It is not for the good or improvement of the community that a large portion of the "news of the day" should consist of

Digitized by Google

such recountals as the daily papers have contained during the last few weeks. Those who do not gloat over the least edifying of news columns must be heartily glad to find that the feast of unreason has at length come to an end. We congratulate Mr. Bird on his emancipation from a state of mental bondage which must have been worse than physical slavery, and we trust the wrong and humiliation through which this respected member of our profession has passed will soon be forgotten. It seems to be the too common lot of medical men to be maligned and tortured by those who owe them a debt of gratitude for services cheerfully rendered. This leads us to remark that one, and not the least forcible, lesson of the Campbell case is that which we have so often tried to teach in these columns—that medical practitioners act wisely when they do not make friends of their patients, but treat their friends strictly professionally. The several relationships of *friend* and *medical adviser* are not socially compatible. The one position ought to be abandoned when the other is assumed. It is in the confusion of the two characters that difficulty and scandal take their rise. Another lesson, scarcely less hard to learn, but not a whit less important, is the unwisdom, both from a personal and a professional point of view, of medical men appearing in court to support or oppose particular lines of evidence. When counsel pit one medical witness against another the prestige of the profession is sacrificed. It is so not only in cases of the class to which we are now alluding, but whenever and wherever medical evidence is produced to bolster up a plea or line of argument, whether of accusation or defence, that wrong is done. It is of course unavoidable that medical practitioners should appear in court; but when they do, we are strongly of opinion that it should be only as witnesses of scientific fact, and as far as possible fact known or ascertained, before a legal issue is raised. Otherwise there can scarcely fail to be *petitio principii* or *suppressio veri*, either or both; not, as is hastily and ignorantly assumed, because medical witnesses are unscrupulous, but because the forensic method and practice will have it so.

ACTION OF DRUGS IN ALBUMINURIA.

AN interesting communication on this subject was read in the Section of Therapeutics at the Brighton meeting of the British Medical Association by Dr. Robert Saundby. He pointed out the difficulty of foretelling what action drugs might possess on the renal processes in genuine albuminuria. The number of drugs with which he experimented was very large. The following are his chief conclusions:—Alkalies used in the form of diluents such as a quart of bitartrate of potash imperial (one ounce and a half to a pint), daily, gave distinctly favourable results in cases of chronic persistent and copious albuminuria. He has employed also citrate of lithia, bicarbonate of potash, ammonic benzoate, and bicarbonate of soda, and includes them in the favourable opinion. The beneficial effect was not due to the formation of alkali-albumen: for Esbach's fluid, which was the method employed, precipitates that form of albumen. Tannate of soda, or rather an ounce mixture of tannic acid and bicarbonate of soda, of each ten grains, with fifteen minims of glycerine, also gave good results. In one case the albuminaria was diminished nearly one-half. Nitroglycerine and fuchsin appeared to have no good effect. Digitalis and other heart tonics—caffeine, strophanthus, sulphate of sparteine, iron salts, acetate, sulphate, and perchloride—increase the amount of albumen passed. Apocynum was not found to have any diuretic action in drachm doses of the tincture, and it increased the albumen in two cases. Turpentine had no beneficial effect, though hæmaturia followed its employment in one-minim doses. Doses of the 1000th of a grain of bichloride of mercury were also inoperative.

TESTIMONIAL TO SIR ANDREW CLARK.

A TESTIMONIAL to Sir Andrew Clark is proposed, and will doubtless be carried to a successful issue. The proposal was occasioned by his recent retirement from the more active duties of the office of physician to the London Hospital. A committee was formed consisting of the President of the hospital, H.R.H. the Duke of Cambridge, members of the medical staff, governing body, and students of the hospital, to carry out the wishes of the promoters. Though the movement naturally emanates from the London Hospital and its medical school, with which Sir Andrew's name is so honourably and indissolubly associated, and the committee will consist of gentlemen connected with one or other of these bodies, yet it is believed that many of the public and of the profession, quite unconnected with the hospital, will be glad to contribute. Sir Andrew is not a mere physician or teacher of medicine. He is more than any other consultant a public man, who, with marvellously little consideration for his own convenience, meets the public for the discussion of current questions in which his special knowledge and experience may be of use; and on such occasions he is ready to take as well as give. He has an ear for public opinion as well as an opinion of his own, which he expresses with equal lucidity and conviction. His form and speech are among our familiar impressions, and his medical dogmas are tempered with a human element, which makes them more effective and acceptable. It may well be that the public will be glad to honour such a member of the profession, who considers not himself when he can be of any use to the public; and we have only to express our hope that the movement, of which Mr. John Henry Buxton is the treasurer, may be very successful.

QUEEN'S COLLEGE, BIRMINGHAM.

DR. SUCKLING concluded on Tuesday last his post-graduate lectures on the Diagnosis and Treatment of Diseases of the Central and Peripheral Nervous System. The delivery of such a course was more or less of an experiment, and, judging from the large attendance (averaging over seventy-five), may be considered as a complete success. The lectures have been rendered additionally interesting, as well as instructive, by the exhibition of forty living cases designed for the illustration of special portions of the course. These included cases of pseudo-hypertrophic paralysis in the child and adult, progressive muscular atrophy of various types, facial hemiatrophia with typical cases of locomotor ataxy, peripheral neuritis, writer's cramp, &c. During the course Mr. Wood-White, of the Eye Hospital, demonstrated the use of the ophthalmoscope and perimeter in the diagnosis of nervous diseases, and showed a number of illustrative cases. After the last lecture a demonstration of pathological specimens bearing upon the subject of the course was given. It is most probable that the success of this course will lead to its being the precursor of others from time to time.

RESCISSION OF THE MUZZLE ORDER.

HAS Sir Charles Warren acted with sound judgment in rescinding the police order for keeping the dogs of the metropolis under proper control? We doubt whether he has considered the matter with sufficient care. It is a popular fallacy to suppose that hydrophobia cannot be epidemic during the cold weather. The wolves of cold countries are not less harmful during periods of greatest depression of the thermometer; and the bite of a mad dog is likely to be as lethal in the winter as in the hotter months. Further, we are amongst those who think that the police order has not been carried out with sufficient stringency to effect any great

Digitized by Google

and lasting result. Many stray dogs have disappeared from our streets, and for this partial clearance we must at least be thankful. But it would certainly have been more for the good of the greater number, not only of the canine but of the human race, if the police order had remained in force for some time longer. And still more would the utilitarian principle have prospered if the law were effectively enforced for a sufficient length of time in the whole of the dominions, states, and empires of the world wherein rabies had been known to occur. Does it not savour somewhat of the ridiculous that Nottingham should have recently adopted the muzzling order which in London has just been withdrawn.

LOCAL GOVERNMENT.

THE subject of Local Government has evidently been seriously considered by the Cabinet, for Mr. Ritchie has announced his intention of bringing before Parliament during the coming session this long-expected measure. The speech made at the annual dinner of the Melksham Agricultural Society by Mr. Walter Long, M.P., Parliamentary Secretary to the Local Government Board, gives some information with regard to the constitution of the authorities which are to be called into existence. These are of course to be representative, but by this word is meant that the various interests which will be affected by the action of the authorities are to be represented upon them. No more difficult task could be undertaken than to carry into effect this intention; the very proposal to constitute authorities upon these lines invites criticism which may be found to seriously imperil the safety of the Bill. It may be expected that the more Radical members of Parliament will desire to accept the present basis of election as that which should be adopted in any further legislation, but local authorities have in many districts disappointed those who hoped for efficient work, and some other change than the mere alteration of their powers and the boundaries of their districts is evidently needed. We shall await the publication of the Bill with much interest, but there is, we fear, little hope that the consideration of its provisions will this session receive the attention of the House. The more urgent questions of Procedure, of Irish Government, and of Supply will afford too many opportunities for the expenditure of time to warrant the existence of any hope that Parliament will be able so soon to express any opinion upon Mr. Ritchie's measure.

THALLIN IN TYPHOID FEVER.

THE introduction of such drugs as "kairin," "antipyrin," and "antifebrin" has somewhat diverted attention from a very powerful antipyretic agent—viz., thallin. Professor Ehrlich lately presented to the Clinical Society of Berlin the results of some researches he has been making with this last-named agent, especially in the treatment of typhoid fever. (*Münch. Med. Woch.*, No. 47.) From experiment, he had found that after administering the drug to animals it was not retained in the nerve centres, but mostly in the fatty tissue of the body. He also found that there was a marked difference in toxic action, according as to whether it was administered by the mouth or subcutaneously, the greater inertness of its effect in the former case being attributable to the hindrance to absorption from the presence of intestinal contents. The lesions induced by a toxic dose comprised fatty degeneration of the kidneys, necrosis of the salivary glands and pancreas, and hæmorrhagic infarcts in the renal pyramids. The chief action of thallin is antipyretic, but it is capable also of moderating inflammation. As regards typhoid fever, it was administered by Ehrlich in two different ways. The first plan consisted in commencing with doses of 0·06 gramme every hour, and reducing the dose to the minimum required to give any effect. The other plan was to commence with a minimum dose, and increase it until an effect was produced, and then to continue the prescription at the dose thus attained. The action of thallin is especially noticeable in its effect on the sensorium and general condition of the patient, who presents the appearance of convalescence, whilst the splenic swelling and roseola are still present; and if the drug be discontinued the temperature will rise again. It is not therefore surprising to learn that, whereas of twenty-eight cases treated by bathing the average stay in hospital was thirty-seven days, of seven cases treated by thallin (minimum doses) the duration of treatment was forty-seven days, and cases on a scale of progressive doses thirty-eight days. However, Professor Ehrlich claims advantages for the drug in the absolute control it exerts over the pyrexia, and the sense of well-being enjoyed by the patient. There were no intestinal hæmorrhages in these cases, and no instance of perforation. The kidneys were not affected, but sequelæ in the form of hyperæmia and œdematous swellings seemed due to the use of the drug. It was not thought that thallin had any specific action against the typhoid bacillus, but it did seem to limit the degree of intestinal ulceration. Professor Ehrlich considers it to be on a level with the bath treatment. Dr. Fränkel pointed out that if the statement were correct that thallin is not found in the nerve centres its action in reducing temperature was rather inexplicable. He had exhibited it in increasing doses, but could not say that the patients experienced any special benefit attributable to the diminished fever. Dr. Guttmann had not been favourably impressed by its use, and had noted the production of rigors.

THE GOOD SERVICE PENSIONS.

A MEDICAL good service pension of £100 a year has become vacant through the death of Sir James Salmon, I.G. It is one of three established in 1859, by warrant, "to be awarded to the most meritorious medical officers of the Royal Navy, under such regulations as shall from time to time be determined on." They have been hitherto awarded to a succession of retired officers of the rank of I.G., and the pension now vacant will in all probability fall to Sir William R. E. Smart, K.C.B., K.L.H., retired I.G., who has obtained his decorations and the appointment of honorary physician to the Queen in recognition of his meritorious services. Sir William is the author of important and interesting papers on epidemics and diseases prevalent in the Navy and in tropical climates, of which many are to be found, in full or in abstract, in our pages.

THE HIGHER EDUCATION OF THE BLIND.

AMONG the possible higher developments of education there still remains at least one neglected sphere for which no adequate provision has been made. This is the establishment of some system of instruction for blind youths of the upper classes. The sons of poorer men are in this respect comparatively fortunate, inasmuch as they possess in specially appointed institutions that stimulus to learn which comes of intercourse with fellow-learners. Public sympathy has naturally first attended to their needs. It is apt to forget that their wealthier brethren have need of the same companionship and scholastic method in prosecuting studies of a higher order. At present there exists but one school, Worcester College, which aims not unsuccessfully at meeting these requirements. Even this establishment is unendowed, and exists only as a private venture. That it ministers to a felt want is undoubted, and that it should remain possessed of no more certain means of maintenance is therefore the more to be regretted. At a meeting held last week in the church-room, St. Jude's, South Kensington, an important

Digitized by Google

step was taken towards its surer foundation in the appointment of a committee entrusted with the work of raising £6000 required for this purpose. We are glad to add that a part of this sum has already been promised.

HYSTEROGENIC ZONES ON MUCOUS SURFACES.

ATTACKS of a spasmodic or of a lethargic nature in hysterical patients can often, as is well known, be excited by touching or pressing upon certain spots or zones on the surface of the body. These external "hysterogenic" zones were examined and described by M. Gaube, and later by M. Blanc-Fontenille. Quite recently, too, M. Lichtwitz, who had been asked by M. Pitres to examine a hysterical patient laryngoscopically, observed that a severe convulsive attack was produced by touching the epiglottis, and subsequently by examining the mucous membranes of half a dozen hysterical patients he has been able to show that hysterogenic zones exist there as well as on the external surface. In all the six cases the nasal fossæ were the seat of spasmogenic zones, which were bilateral except in one instance, in which touching the nasal mucous membrane on one side produced a hypnotic attack. In four cases either spasmogenic or lethargogenic zones were found in the laryngeal mucous membrane, the posterior wall of the pharynx presenting one instance of each kind. The mucous membrane of the gums, the conjunctivæ, and the external auditory meati also furnished "zones." In some of the cases the sensitiveness was obliterated by cocaine, so that necessary therapeutic applications could be made; in other cases the use of cocaine did not succeed. In one case, in which the leg was in a plaster bandage, where a violent attack might have proved serious, a convulsion, which was accidentally induced by touching the mucous membrane, was arrested immediately by a friend whom the patient had brought with her, who was acquainted with her external spasmo-inhibitory zones.

THE CHAIR OF MATERIA MEDICA AT ABERDEEN.

THE following gentlemen are, we understand, candidates for the above chair:—Dr. John G. Hall, assistant to the Professor of Materia Medica in the University; Dr. J. C. Ogilvie Will, surgeon to the Infirmary; Dr. Gordon, assistant-surgeon, Sick Children's Hospital; Dr. Robert M. Wilson, Old Deer, formerly Assessor Examiner in Materia Medica and Botany in the University; Dr. Leith Napier, assistant to the Professor of Materia Medica, University of Glasgow; Dr. R. Stockman, assistant to the Professor of Materia Medica, University of Edinburgh; Dr. Theodore Cash, assistant to Dr. Brunton, lecturer on Materia Medica, St. Bartholomew's Hospital, London; and Mr. Joshua Law Kerr, M.B., C.M. Aber., late assistant to the Professor of Midwifery in the University of Aberdeen.

MEDICAL EDUCATION IN MADAGASCAR.

IT is gratifying to learn from *Medical Missions* that an important advance has recently been made in the matter of medical education in Madagascar. There are now four medical missionaries in Antananarivo—Drs. Fox and Allen of the Society of Friends' mission, and Drs. Borchgrevink and Guldberg of the Norwegian mission. They have combined to form a board for medical education for the furtherance of the work of medical missions, and under the joint auspices of the missionary societies involved. A curriculum has been decided upon, and each student is to complete a five years' course. It is not to be supposed that hitherto no attempts have been made in the direction of medical instruction. Some of the pupils of Dr. Davidson, the first medical missionary to the Malagasy, are practising in Antananarivo and elsewhere. Dr. Fox himself during the last five years has admitted twenty-one students. Dr. Davidson during his residence in Antananarivo prepared manuals on therapeutics and systematic medicine, which are in regular use by the Malagasy students, and Dr. Fox is now preparing other manuals for their use.

SANITATION IN KILMARNOCK.

AN important report has been prepared by Dr. John C. McVail, the medical officer of health, on the proper disposal of the excreta and house refuse of the population of Kilmarnock. Dr. McVail very properly contends that excreta should, if possible, be removed from the vicinity of dwellings before decomposition sets in, and this condition would require removal every forty-eight hours. The danger of their detention for a longer period is naturally greater in the case of such diseases as enteric fever; and Dr. McVail holds the same view with regard to scarlatina. The evidence as to mischief from scarlatinal excreta is by no means clear, but we can well conceive that they may contain the poison of the disease, and it is certainly right to look with special suspicion on all diseased excreta. In Kilmarnock it is taken for granted that the watercloset system is not adapted to all classes of the population, and after acquiring experience as to the working of other systems in northern cities, the pail system is strongly recommended for adoption; one pail to receive excreta and to be frequently changed for a clean one by the scavengers, the other to receive house refuse only. In the case of the latter pail, and subject to the regular incineration of vegetable refuse in the ordinary fire-places, a less frequent removal is held to suffice than is necessary in the case of the excreta-pails. The alternative system of merely emptying the pails instead of substituting clean ones is referred to; but it is rightly condemned. Wherever it exists the excreta-pail soon becomes foul, and hence the main advantage of the system, in so far as the prevention of nuisance and risk to health is concerned, is practically lost. Such a report as that prepared on the subject by Dr. McVail deserves, and will doubtless receive, the careful attention of those to whom it is addressed.

AFTER-CARE FOR MENTAL CONVALESCENTS.

THERE is especially great difficulty in the management of convalescents from mental disease, and we are glad that the proposal to provide suitable half-way houses between the asylums and the world is taking a practicable shape. It is, however, of the very highest importance that what is done should have the sanction and support, and be benefited by the practical counsel, of the superintendents of asylums. We would therefore advise the committee of the "After-care Association for Poor and Friendless Female Mental Convalescents" to place itself in direct communication with the committee of the Medico-Psychological Society, and thus ensure that money may not be wasted or misapplied. The work must be thoroughly practical, or it will fail in usefulness.

DIPHTHERIA AT SHIRLEY.

AN outbreak of diphtheria has been prevailing in Shirley, a suburb of the newly created borough of Croydon, and by the inhabitants of the locality affected the disease is very generally attributed to the defective means of sewer ventilation. Indeed, the odours issuing from the man-holes are described as horrible; and at a public meeting a request was ordered to be conveyed to the Mayor, asking that an independent sanitary engineer might be appointed to inspect and to report upon the system of sewers. It is somewhat unfortunate that this request was not complied with, for whatever the cause of the diphtheria may be, it seems pretty clear that the existing arrangements as to sewer

Digitized by Google

ventilation are faulty. There are, however, sanitary officials in Croydon who are quite able to investigate the source of the prevailing disease, and also to advise as to the proper remedies.

UNIVERSITY OF LONDON.

A MEETING of Convocation of the University of London has been summoned for January 18th, when no doubt an interesting statement as to the relations of the University to the present position of the question of medical degrees will be forthcoming.

AN ARTIFICIAL RAMUS AND CONDYLE.

DR. CUNNINGHAM, at the last meeting of the Odontological Society, showed a very ingenious apparatus invented by Herr Rosenthal, which was designed to meet the following difficulty. The ramus and condyle of the lower jaw having been removed for a sarcoma, it was subsequently found that the other side became dislocated, and, after reduction, for which an anæsthetic was required, slipped out again immediately. Gold bands were fitted accurately to the last molar of each jaw on the side where the bone had been removed, to the upper of which a thick slightly curved wire was soldered. This wire fitted loosely into a tube soldered to the band round the lower tooth, and the bands themselves were fixed to the teeth by screws tapped into them. The apparatus entirely prevents the dislocation, and although there is no lateral movement the patient can eat fairly well.

ST. ANDREWS UNIVERSITY.

A MEMORIAL from the Senatus Academicus of the University of St. Andrews has (as was stated in our last issue) been presented, setting forth the claims of the University to such an increase in the staff of its medical professors as would enable it to give two *anni medici*, the period of residence required by the Scottish Universities for medical graduation. A memorial to the same purpose is in course of preparation from the graduates of the University, and is being largely signed, some 800 having already appended their names.

BACTERIOLOGY IN BARCELONA.

THE municipality of Barcelona has arranged to establish a laboratory of bacteriology, and to furnish it with the requisite appliances for all classes of investigations. It is to be under the well-known Dr. Férran, whose views were accepted much more generally in Barcelona than in Madrid. The measure was agreed to in the Town Council by a majority of twenty-five to three.

ANOTHER LUNACY BILL.

THE Home Secretary is said to have under consideration a proposal to deal with the laws relating to lunatics. Will it find its way to the Statute-book; or, if it should, will it be worth anything? We have doubts, bred of too many disappointments.

ROYAL UNIVERSITY OF IRELAND.

OUR Dublin correspondent writes:—An election for a member of Senate will take place at a meeting of Convocation to be held on the 30th inst., when it is believed that Mr. Stephen O'Sullivan, Professor of Surgery in the Queen's College, Cork, will be successful. There are four candidates in the field for the vacancy. By the death of Dr. Lyons another vacancy on the Senate has arisen, that gentleman having been nominated by the Crown on the foundation of the University in 1860.

FOREIGN UNIVERSITY INTELLIGENCE.

Berlin.—Professor Westphal has just celebrated the completion of his twenty-fifth year as teacher in the University. The total number of students, including all the faculties, is the highest on record, being 5357. Of these 1297 are medical students.

Dorpat.—The unveiling of the Baer memorial has just taken place.

Gottingen.—The 150th anniversary of the founding of the University will be held next year.

Innsbruck.—The Government has promised to provide the funds for building a new Anatomical Institute.

Konigsberg.—The name of Professor Braun of Jena is now brought forward in addition to those of Drs. Madelung and Miculicz, as a candidate for the chair of Surgery. During the vacancy Dr. Stetter is performing both the clinical and the professorial duties.

Leipsig.—Professor Credé has intimated his desire to resign the charge of the Obstetric Institution, which he has held for thirty years.

Leyden.—Dr. Simon Thomas, Professor of Midwifery, has just died at the age of sixty-six, having held the professorship for nearly forty years.

Upsala.—An Extraordinary Professor of Anatomy is to be appointed, who is to occupy himself with Histology and Embryology.

St. Petersburg (Military Medical Academy).—Privat-docent Dr. A. Beltsoff has been appointed by the Conference (Senate) to take temporary charge of the Surgical Clinic of the late Professor Kolomnin. It is stated by the St. Petersburg correspondent of a Riga paper that Professor v. Bergmann of Berlin has declined an invitation to the St. Petersburg chair.

Granada.—Dr. Don Daniel de Zuloaga y Santoe, Professor of Midwifery, has died from cerebral hæmorrhage, which occurred just as he was proceeding to his morning lecture.

WE regret to announce the death on the 17th inst. at his residence near Gosport, of Sir James Salmon. The deceased was born at Irvine, Argyleshire, in 1811, and received his professional education at the University of Glasgow. At the age of twenty-two he entered the Royal Navy as assistant-surgeon, becoming surgeon in 1840, Deputy Inspector-General of Hospitals in 1855, and Inspector-General in 1868, in which year he was knighted. Sir James was an honorary physician to the Queen, and was in receipt of a pension for meritorious services.

SIR WILLIAM STOKES (President of the Irish College of Surgeons), Dr. William Moore (ex-President of the Irish College of Physicians), and Sir George Bowens (a Governor of the Apothecaries' Hall), are candidates for the position of Crown nominee on the General Medical Council, in the room of the late Dr. Lyons.

THE Lettsomian Lectures will be delivered at the rooms of the Medical Society of London on the 3rd, 17th, and 31st of next month by Dr. J. Langdon Down. The subject of the lectures is "On some of the Mental Affections of Childhood and Youth."

THE Madras Government is about to engage in the cultivation of jalap. The demand this year from the Madras Medical Department was for 1300 lb., and only 400 lb. could be obtained from private growers.

SIR WILLIAM TURNER has been elected by the University of Edinburgh to represent that body in the General Medical Council.

Digitized by Google

As will be seen by a letter from Mr. Upton, published in another column, the Apothecaries' Society has appointed Mr. R. Brudenell Carter to be its representative in the General Medical Council, in place of Mr. Bradford, whose term of office had expired.

DR. MULES, of the Manchester Royal Eye Hospital, has been appointed one of the Vice-Presidents in the Ophthalmic Section of the International Congress to be held at Birmingham.

THE next President of the Pathological Society will probably be Sir James Paget, Bart.; and of the Clinical Society, Dr. W. H. Broadbent.

THE cholera is very prevalent in Buenos Ayres and its vicinity. In Cordova on Nov. 30th there were twelve new cases and five deaths.

THE ROYAL COLLEGE OF PHYSICIANS AND MEDICAL DEGREES.

THE following is a brief report of the debate which arose at the meeting of Fellows of the College of Physicians on the 16th inst., on the motion that the first resolution of the report of the delegates be adopted.

Sir W. GULL said the terms of the resolution were too vague, it not being indicated what degree should be conferred. The College and the spirit of the time had determined that there should be some recognition given to London students beyond that conferred by the Conjoint Board; but no decision had been come to as to what should be the nature of that recognition or on what terms it should be given. Believing as he did that the two Colleges constituted one of the most important medical examining boards in the world, he considered the condition named in the report, that candidates passing the present examinations should have a degree conferred on them, "provided that they have passed such examinations in arts and science as may hereafter be defined," to be weak and inadequate. The Colleges should advance clinical medicine and surgery, and their degree should be based on excellence in these subjects. It was the only degree which they were competent to give, for it embraced the subjects for which they alone were responsible.

Subsequently Sir William moved an amendment to the effect that candidates who have passed the examinations of the Conjoint Board shall be admitted to a further examination for a degree in clinical medicine and surgery.

Dr. ALLCHIN moved—"That no scheme for conferring degrees in medicine and surgery upon candidates who have passed the examinations of the Examining Board in England shall be deemed satisfactory unless it provide for the conferring of degrees by some university body outside the Colleges themselves, but upon which they may be represented." He admitted that the question whether such candidates should have a degree or not had been settled; but the question remained how that principle was to be carried out. The report suggested a means, but except in one of the later clauses the idea that the degree-conferring body should be a university was curiously concealed. It was clear, however, that a university was contemplated; but how was it to be established? The report was not the result of a unanimous vote, and he was unable to reconcile its tenour with the expressions of the report of the Teaching University Association deprecating the proposal that the Colleges should grant a degree. Yet seven of the delegates who are responsible for the report were members of the committee of that Association. He contended that the statements in the two reports were absolutely contradictory, and pointed out that Professor Marshall at the meeting of the Association on the previous day had stated that if the Colleges adopted a scheme outside the lines laid down by the Association, it would be their duty to oppose it. He (Dr. Allchin) failed to see any reason why the Colleges should constitute the proposed university; the expression in Clause 2, that it is "the natural way," being scarcely explicit; and in Clause 4, the statement that the curriculum of the Colleges is on a level with that of the majority of the universities is put forward as a reason why they should grant degrees. But there were very cogent reasons against this. In the first place, to convert the present Colleges as they stand into a university is against all precedent whatever. The mere fact of granting a degree is the least among the functions of a real university. Montpellier—which was cited as a precedent—existed as a teaching body. He contended that they had to deal in this question with the academic aspect of a university as distinguished from the corporation aspect. Further, the report was inconsistent in urging at one time the advantages of London as a place for clinical study, and therefrom arguing in favour of the scheme, and in the first resolution giving permission to the governing body to admit students who have pursued their work in other than London schools. Are the Colleges, he asked, to be merged in the university, or are they to go along side by side? Is the College of Physicians to grant the Fellowship with one hand and a degree with the other? Is its prestige to be buried in a new "University of Westminster"? The degree in contemplation must be an inferior degree, so that they were asked to constitute a second-rate university. He did not think he was bound to suggest an alternative scheme; but he maintained as a principle that the degrees should be conferred by a *bonâ-fide* university—an outside body. This, he could conceive, might be either the London University itself, or such a university as was contemplated by the Teaching University Association. It had not been suggested that any particularly higher standard should be insisted on; indeed, if it were, the object would be defeated. That object—viz., to keep students in London for clinical work—was minimised by the permissive clause of Resolution 1. The proposal was purely a professional one; and if the College took the steps demanded, it would detract from its honour and position.

Dr. NORMAN MOORE seconded the amendment. He said the report was the outcome of a very large number of compromises, and the delegates not being anxious to insist too much on their individual opinions, there was no minority report. There were two distinct views before the Committee—the one being that the public require a degree, and the other that the question of giving a degree should be based on the desire to improve medical learning. The minority held to the second view, the majority to the first. The College would have a difficulty in obtaining powers to get a degree upon the mere ground that practitioners are desirous of it; and he always held that the mere acquisition of a degree (e.g., that of Brussels) for its value as a title alone was a deception, making the public believe that there had been a university education behind it. A university consists of people who learn and people who teach; and the time has come when such a university can be established in London. When the Conjoint Board was formed, the College of Physicians entered into it on the ground that it was not competent to appoint examiners in surgery; and on the same ground how is it competent for a medical board to control examinations in arts and science? The Colleges should give the public something that is of value; but if that report were adopted, they would give what was worthless. On the other hand, the College had the power to play a great part in forming a university in London.

Dr. CURNOW said they had to remedy an acknowledged grievance. As to waiting for the institution of a teaching university, he believed that the first faculty of such a university would be established under the auspices of the two Colleges, and he hoped the basis would be widened. Were they to wait for the science and arts teachers in the metropolis to combine, when they had a concrete medical faculty already at hand? Universities differed all over the kingdom—e.g., Durham, Oxford, London, Edinburgh, Dublin; so that it was absurd to say that there was only one type of university.

Dr. BRISTOWE pointed out that the College decided last year that steps should be taken to give a degree.

Sir RISDON BENNETT differed from Dr. Bristowe. Last year's resolution empowered the delegates to suggest some mode of obtaining a degree, and did not bind the College to confer it.

The PRESIDENT stated that Dr. Moore was on the subcommittee which drew up the report, and with respect to the clause empowering the governing body to include other

Digitized by Google

than London schools, it was felt that they ought to recognise any large clinical school outside London.

Dr. WILSON FOX pointed out that titles at present conferred by the Colleges were not regarded by the public as equivalent to degrees, although the profession were aware that they were not inferior. So long as a large body of English medical men were under that sense of inferiority, their profession suffered in dignity. The University of London for fifty years had been upholding the view that a degree in medicine is a stamp of knowledge; and, taking Edinburgh as the type of a medical university, he could not see that the relations under which students live there are at all different from those in London. It was entirely hopeless to appeal to the University of London, whose degrees were, as Sir James Paget had said, "honours degrees." The Edinburgh degree is a "pass degree," and what London wants is a good medical pass degree, to stamp a man as "learned in medicine." Turning to Dr. Allchin's speech, Dr. Fox asked whether the two Colleges were incapable and unfit to give degrees? It passed comprehension to see what the extraneous body suggested in the amendment is to do for the Colleges; and the alternative, that the Colleges would be merged in a university, was not necessary. He did not see why they should not retain their independence, and yet combine for this great purpose, and he could not see how they would be disgraced by so doing. This matter was very urgently demanded by medical students. They could hardly wait for the formation of a teaching university; but, at any rate, they could constitute a medical faculty, and leave the full development of the university to the future.

Dr. CHAMBERS disputed the statement in the report that the curriculum of the Colleges was on a level with those of the majority of universities, and showed by statistics that the best work was done by university graduates.

Dr. QUAIN asked how such degrees were to be conferred except by the Colleges. As to Sir W. Gull's objection, the scheme simply meant that the degree should not be inferior to a university test. The whole question of how it is to be done must be left over. He sympathised with the idea that the degree should be confined to London students, but saw difficulties in practically carrying it out. Dr. Allchin's amendment would set the two Colleges seeking for a body which has no existence.

Sir H. PITMAN moved, and Sir G. PAGET seconded, the adjournment of the debate.

The adjourned meeting took place on the 23rd inst., when there was again a very large attendance of Fellows.

Sir H. Pitman, in an eloquent and forcible speech, reminded the College of the steps previously taken in the matter, and pointed out that the opportunity was one which the College should not let go, for it would never recur. Dr. Matthews Duncan and Sir Risdon Bennett supported the amendment, which was opposed by Dr. Ord, Sir A. Clark, Dr. Quain, Dr. Dickinson, Dr. Latham, Dr. Barnes, Dr. Broadbent, and Dr. Priestley. On a division, nine voted for Dr. Allchin's amendment, which was negatived by a very large majority in a full comitia.

The second resolution on the agenda, "that an application be made to the Crown by the Royal College of Physicians of London and the Royal College of Surgeons of England, acting conjointly, for power to confer degrees in Medicine and Surgery," was then moved by Dr. Broadbent, seconded by Sir W. Gull, and carried unanimously.

The first resolution and Sir W. Gull's amendment were referred to the delegates of the two Colleges for further consideration.

VITAL STATISTICS.

HEALTH OF ENGLISH TOWNS.

IN twenty-eight of the largest English towns 5371 births and 3605 deaths were registered during the week ending Dec. 18th. The annual death-rate in these towns, which had steadily increased in the preceding four weeks from 19·1 to 22·9, declined again last week to 20·7. During the first eleven weeks of the current quarter the death-rate in these towns averaged 19·8 per 1000, and was 2·0 below the mean rate in the corresponding periods of the ten years 1876–85. The lowest rates in these towns last week were 11·9 in Derby, 12·1 in Brighton, 14·8 in Birkenhead, and 17·1 in Birmingham. The rates in the other towns ranged upwards to 27·6 in Liverpool, 28·0 in Wolverhampton, 28·3 in Norwich, and 37·1 in Preston. The deaths referred to the principal zymotic diseases in the twenty-eight towns, which had been 379 and 424 in the preceding two weeks, declined again last week to 386; they included 141 from measles, 77 from scarlet fever, 54 from whooping-cough, 42 from "fever" (principally enteric), 37 from diphtheria, 34 from diarrhœa, and 1 from small-pox. No death from any of these zymotic diseases was registered last week in Derby; whereas they caused the highest death-rates in Bristol, Leeds, and Wolverhampton. The greatest mortality from measles occurred in Bristol, Halifax, Leeds, and Wolverhampton; from scarlet fever, in Liverpool, Salford, Bradford, and Sunderland; from whooping-cough, in Preston and Huddersfield; and from "fever," in Manchester, Preston, and Plymouth. The 37 deaths from diphtheria in the twenty-eight towns included 16 in London, 6 in Portsmouth, 3 in Birmingham, and 4 in Liverpool. Small-pox caused one death in London, but none in its outer ring, or in any of the twenty-seven large provincial towns. Only one case of small-pox was under treatment on Saturday last in the metropolitan hospitals receiving cases of this disease. The deaths referred to diseases of the respiratory organs in London, which had increased in the six preceding weeks from 293 to 494, declined again last week to 415, and were 114 below the corrected weekly average. The causes of 99, or 2·7 per cent., of the deaths in the twenty-eight towns last week were not certified either by a registered medical practitioner or by a coroner. All the causes of death were duly certified in Plymouth, Birkenhead, and Huddersfield. The largest proportions of uncertified deaths were registered in Derby, Halifax, Blackburn, Oldham, and Salford.

HEALTH OF SCOTCH TOWNS.

The annual rate of mortality in the eight Scotch towns, which had been 23·1 and 22·0 per 1000 in the preceding two weeks, rose again to 22·5 in the week ending Dec. 18th; this rate was 1·8 above the mean rate during the same week in the twenty-eight large English towns. The rates in the Scotch towns last week ranged from 16·3 and 18·0 in Leith and Perth, to 26·9 in Glasgow and Paisley. The 556 deaths in the eight towns last week showed an increase of 12 upon the number in the previous week, and included 19 which were referred to whooping-cough, 16 to scarlet fever, 12 to diarrhœa, 11 to "fever" (typhus, enteric, or simple), 10 to measles, 6 to diphtheria, and 1 to small-pox; in all, 75 deaths resulted from these principal zymotic diseases, against 81 and 63 in the preceding two weeks. These 75 deaths were equal to an annual rate of 3·0 per 1000, which exceeded by 0·8 the mean rate from the same diseases in the twenty-eight English towns. The fatal cases of whooping-cough, which had been 19 and 15 in the previous two weeks, rose again last week to 19, of which no fewer than 16 occurred in Glasgow. The 16 deaths from scarlet fever showed a further decline from the 25 and 17 returned in the previous two weeks, and included 10 in Glasgow and 2 in Edinburgh. The 12 deaths attributed to diarrhœa (of which 7 occurred in Glasgow, 3 in Aberdeen, and 2 in Perth) showed a further decline from the numbers in recent weeks. The 11 deaths referred to "fever," however, showed a considerable increase upon recent weekly numbers, and included 8 in Glasgow, against but 2 in each of the preceding two weeks. All the 10 fatal cases of measles, exceeding the numbers in recent weeks, were returned in Glasgow; while of the 6 deaths from diphtheria, 4 occurred in Glasgow and 2 in Edinburgh. The death from small-pox was registered in Aberdeen. The deaths referred to acute diseases of the respiratory organs in the eight towns, which had been 125, 142, and 144 in the preceding three weeks, further rose last week to 174, but were 1 below the number in the corresponding week of last year. The causes of 57, or more than 10 per cent., of the deaths in the eight towns last week were not certified.

HEALTH OF DUBLIN.

The rate of mortality in Dublin, which had increased in the preceding five weeks from 23·6 to 35·6, declined again to 29·6 in the week ending Dec. 18th. During the first eleven weeks of the current quarter the death-rate in the city averaged 25·5; the mean rate during the same period did not exceed 18·2 in London and 18·9 in Edinburgh. The 290 deaths in Dublin last week showed a decline of 41 from the

Digitized by Google

high number in the previous week, and included 9 which were referred to "fever" (typhus, enteric, or simple), 5 to scarlet fever, 5 to diarrhœa, 2 to whooping-cough, 1 to measles, and not one either to small-pox or diphtheria. Thus 22 deaths resulted from these principal zymotic diseases, against 21 and 23 in the previous two weeks; they were equal to an annual rate of 3·3 per 1000, the rates from the same diseases being but 1·7 in London and 1·0 in Edinburgh. The 9 deaths from "fever" showed a marked increase upon those returned in recent weeks, and exceeded the number in any week since the middle of February last. The fatal cases, however, of scarlet fever, diarrhœa, and whooping-cough were all fewer than those returned in the previous week. Four inquest cases and 2 deaths from violence were registered; and 41, or nearly a quarter, of the deaths occurred in public institutions. The deaths of infants exceeded the number in any recent week, while those of elderly persons showed a decline. The causes of 48, or 24 per cent., of the deaths registered during the week were not certified.

INFANT MORTALITY IN EGYPT.

The excessive mortality of infants and young children in Egypt, and especially in its largest towns, has recently been the subject of a special report by M. Engel, the medical superintendent of sanitary statistics, to the Inspector-General of Public Health in that country. It is pointed out that in Cairo the proportion of deaths under five years of age to total deaths was equal to 55·6 per cent. in Cairo, and to 52·2 per cent. in the three years 1882, 1884, and 1885. The political condition of the country broke the continuity of the statistics in 1883. In the fourteen largest towns of Lower Egypt the proportion was equal to 55·7 in the first and to 64·1 in the second quarters of the present year. These figures point conclusively to marked excesses of infant mortality, but the proportion of deaths of children to total deaths depends in great measure upon the proportion of children in the living population, which M. Engel has no means of ascertaining; and the high birth-rate in Egypt is a well-known fact. In order, therefore, to measure infant mortality by a more satisfactory standard, the proportion of these deaths to recorded births is also given. The mean proportion of deaths under one year to births in the last three years in Cairo was 31·4 per cent., and in four towns of Lower Egypt (Rosetta, Chibin-el-Kom, Guizet, and Benha) 26·8 per cent.; in Alexandria infant mortality, measured in this way was 21·5 in 1884 and 21·0 in 1885. Infant mortality, measured in this manner, did not exceed 15·1 per cent. in London during the ten years 1875-84, and during last year it was only 14·8; on the other hand, it must be remembered that in the five years 1870-4 this proportion of infant mortality was equal to 23·9 in Liverpool, whereas it fell to 18·8 in 1874-84. It is stated that the Egyptians show great affection for their children, but that only an insignificant proportion of them secure any medical attention in case of illness. M. Engel reports that in the smaller Egyptian towns not more than 1 per cent. of the deceased persons of all ages have been seen by a medical practitioner previous to death. Under these circumstances, and bearing in mind the fatal effect of the climate upon young children, the high rate of infant mortality in Egypt need cause no surprise.

THE SERVICES.

WAR OFFICE.—Army Medical Staff: Surgeon-General Sir Anthony Dickson Home, V.C., K.C.B., has been granted retired pay.

INDIA OFFICE.—The Queen has approved of the following promotions among the officers of the Staff Corps and Indian Military Forces made by the Governments in India:—Deputy Surgeon-General George Bidie, C.I.E., of the Madras Medical Establishment, to be Surgeon-General; Surgeon-Major Geo. Cochet Chesnaye, Surgeon-Major John Duncan, M.D., and Surgeon-Major Edward Ord Tandy, of the Bengal Medical Establishment, and Surgeon-Major Alexander Porter, M.D., and Surgeon-Major Samuel Bradshaw Hunt, of the Madras Medical Establishment, to be Brigade Surgeons; Surgeon Richard Nugent Stoker, Surgeon Gerald Bomford, M.D., Surgeon Arthur Barclay, and Surgeon Charles Joseph McCartie, M.D., of the Bengal Medical Establishment; Surgeon William O'Hara and Surgeon Thomas Hume, of the Madras Medical Establishment, and Surgeon Dhanjisha Navroji Parakh and Surgeon John Lucas, M.D., of the Bombay Medical Establishment, to be Surgeons-Major.

ARTILLERY VOLUNTEERS.—2nd Middlesex: James Hill Gibson, M.D., to be Acting Surgeon.

RIFLE VOLUNTEERS.—1st Volunteer Battalion, the King's Own Light Infantry (South Yorkshire Regiment): Acting Surgeon F. H. Wood resigns his appointment.

Correspondence.

"Audi alteram partem."

DISLOCATION OF THE HIP.

To the Editor of THE LANCET.

SIR,—In his remarks last week on my lecture on "Dislocation of the Hip" (THE LANCET, Nov. 27th), Mr. Morris confesses his inability to understand one of my conclusions, for he says, "I do not know how a dislocation can be other than *indirect* if the head of the bone is '*carried up to a variable extent*,' no matter by what force, *after it has left the acetabulum*." To which I must reply that I confess my inability to understand the difficulty. If the head of the bone is driven in one direction through the capsule onwards from the acetabulum, it is, I suppose, a direct dislocation, however variable may be the extent to which it is driven; and this is what I maintain occurs in many, at any rate, of the so-called backward dislocations of the hip. Force applied at the lower part of the thigh and knee, with the limb flexed, *ad*ducted, and inverted, drives the head of the thigh-bone through the lower and back part of the capsule between the obturator muscles to the back of the joint, or backwards and upwards, to an extent and in a direction varying with the amount and direction of the force. This, as I have said, may be shown in the dead body. Or, owing to somewhat more obliquity in the direction of the force, the head of the bone may be driven through the capsule at a correspondingly higher level under the obturator internus, tearing through that muscle with the gemellus superior, and coming into contact with, and perhaps tearing also, the pyriformis, and, it may be, one or more of the glutei. In these cases the course taken by the bone is in one direction, and is the resultant of force acting in one direction; though the course taken and the extent to which the head of the bone goes will, in different cases, vary according to variations in the line of action of the force and the amount of the force. The bone may be driven directly, backwards and upwards, through any part of the back of the capsule—the under, the middle, or upper part. Most commonly it appears to be the under part of the back of the capsule which gives way. The position of the limb—flexion, *ad*duction, inversion—is a usual or natural one, one of harmonious coördination, one therefore in which the limb is likely to be found when any shock occurs, which cannot be said of *ab*duction with inversion. Moreover, as in other dislocations, that under discussion is most easily reduced by the application of force in a direction (*ab*duction) the reverse of that by which the dislocation was produced.

Mr. Morris places side by side, in parallel columns, the accounts of the dissection of one of my cases and one of his to show the similarity between the two, the inference to be drawn being that in both the accident occurred during *ab*duction. But it is to be observed, first, that in my case the rent in the capsule extended higher than in his, reaching to near the attachment of the obturator externus; and, secondly, as we learn from the account of his case (Medico-Chirurg. Trans., vol. lx.), it is by no means clear that in it the accident did occur during abduction. Indeed, it seems as probable that, in both instances, it took place during *ad*duction as during *ab*duction.

I do not dispute the occasional occurrence of the accident in the manner for which Mr. Morris contends—viz., in the position of *ab*duction,—though, for the reasons given in the lecture, I do not think it is the usual manner. I fully appreciate also the good work which Mr. Morris has done in reference to this among other subjects; but I must submit that the greater facility and success in reducing dislocations of this and also of other joints in recent times is due, first and chiefly, to the introduction of anæsthetics;

Digitized by Google

secondly, to the gentler methods of surgical treatment now generally adopted, of which the manipulatory proceedings are an example; and, thirdly, to the knowledge of the fact, for which we are much indebted to Mr. Morris, that the rent in the capsule is at a lower point than was formerly supposed.

I am, Sir, yours obediently,

Cambridge, Dec. 20th. G. M. HUMPHRY, F.R.S.

MR. SAVORY'S PAPER ON LIGATURE OF THE FEMORAL ARTERY.

To the Editor of THE LANCET.

SIR,—I think there must be some accidental inaccuracies in your report of Mr. Savory's paper on Ligature of the Femoral Artery at the Royal Medical and Chirurgical Society in your issue of to-day. I was unfortunately prevented from being at the meeting, and therefore can only trust to the report. In the abstract, quoted in your report, Mr. Savory is made to say that out of seventeen specimens of old ligature of the femoral in Scarpa's triangle, the artery was "pervious throughout in thirteen and partially closed in four." I suspect that what is meant is that in the thirteen cases only a small part of the artery—that immediately adjoining the spot where the ligature was applied—was found to be obliterated, while in the four the obliterated part was more extensive. Further, Mr. Savory is quoted as saying, in his reply to the observations made on his paper, that "he was not aware that any ordinary book stated that the artery was pervious from the ligature to the aneurysm." I had thought that this was stated in every text-book. Certainly, in my own book on the "Principles and Practice of Surgery," I state that in cases where considerable branches come off between the ligature and the aneurysm "there are two arches of anastomosis—one to convey the blood round the portion obliterated by the ligature, and the other to convey the blood round the obliterated aneurysmal sac, above which there is a pervious tract of artery," and I refer to a figure taken from a preparation in the museum of St. George's Hospital to prove this; while in another part of the book is another figure to show how small, in some cases, the obliterated part of the vessel is. The passage is on page 501, and the figures on page 502 and page 86 of the first edition of the book, and they remain unaltered in subsequent editions. Again, in the "System of Surgery," third edition, vol. iii., page 54, I say: "When the ligature has been applied far away from the disease, the blood returns into the vessel above the aneurysm"; and in the passage which follows I again describe the two arches of anastomosis. I have not looked at other text-books, but I should think it probable that they teach the same doctrine. I have taught it ever since I began to teach surgery, and, as far as I can recollect, have learnt it ever since I began to learn. I cannot but suspect, therefore, that the report is inaccurate. If I have misinterpreted Mr. Savory's meaning, I know that others have done the same, and a few words of explanation on so important and practical a subject might be useful.

I am, Sir, yours obediently,

Great Cumberland-place, Dec. 18th. T. HOLMES.

THE FELLOW, THE MEMBER, AND THE FRANCHISE.

To the Editor of THE LANCET.

SIR,—It is with considerable diffidence that we take up the gauntlet thrown down by Mr. Erichsen, and the more so as there is not one Member of the College who does not entertain feelings towards that gentleman approaching those of personal affection. But as the cause of the Members is at stake, Mr. Erichsen will, we trust, forgive us for remarks directed against his arguments, not himself. We had thought that one or two of the points to which Mr. Erichsen now draws special attention had been noted by him in the first instance in haste, and we are not a little surprised to see that he now treats them as *chevaux de bataille*. For example, his argument that the great body of Members of the College care little for the attainment of the electoral franchise he supports by instancing the fact that "out of 4000 Members who could five years ago have easily acquired it, only nine availed themselves of that privilege." This line of reasoning carries in itself its own condemnation, for surely Mr. Erichsen will not maintain that because the Members of the College were too honourable to covet a Fellowship without examination the origin of which had been so earnestly decried by them, they therefore cared nothing for the privilege of a voice in the management of College affairs. Why, Sir, if these very Members had had a vote for candidates for a seat on the Council they would have given it only to such men as would have seen that that evil was put down, and for this presumption we have very good grounds in letters received by us from men who were Members before 1843, and who have always set their faces against the Fellowship for the very reason that it had been originally obtained in the manner advocated by Mr. Erichsen, and the neglect of which he would hold up as a reproach to Members. Does he or anyone else imagine that the Council, the Fellows, or the Members would care to see the Fellowship swamped in the way suggested? As we have said elsewhere, the Members honour the Fellowship too much to wish to see its distinction lowered one iota, and are even more jealous of its reputation being sustained than is the Council itself, for that body would fain introduce a certain number of nominated Fellows into the ranks every year, but the Members will have none of this measure.

Mr. Erichsen's next point can be easily dismissed. He states that "the Council as at present constituted is a thoroughly representative body." We ask whether he uses the term in the loose manner of the day, or in its accurate sense. By the light of the latter, we can only concede that the Council is representative of the metropolitan Fellows, for it is elected by them alone; any wider representative principle is totally "unrepresented" on it. To Mr. Erichsen's succeeding argument—viz., that "the Members of the College have never possessed the elective franchise"—we can give no unqualified assent, as this is a point upon which legal opinions may possibly differ; but he knocks the bottom out of it by recalling the disgraceful history of a self-elected Council. The argument does not come forth unsullied from its partnership with the rest of the sentence. The final issue raised we would willingly have passed over in silence; for when a past president of the College talks of the Membership being "effectually sunk under a degree" it is indeed time that the Members hung their heads. Has it come to this, that a man can grow ashamed of belonging to the Royal College of Surgeons of England? and at what grade of a degree, of what university, is it that a Member makes haste to cover up his title of "surgeon"? We might almost answer that if these men renounce their Membership, then let the College renounce them; but those who are proud of their *alma mater* call for a system of representation by which no man shall feel that he has no interest in the doings of the College, and everyone who holds the title of M.R.C.S. shall be a real *Member*, not a mere exostosis. On this point we cannot do better than quote an extract from the speech of the late lamented Mr. Sampson Gamgee, delivered at the great College meeting of Oct. 29th, 1885, for it traverses the whole of the principle of this case: "Eight hundred and nineteen men had been sent out under the authority of this College to practise in Her Majesty's land and sea forces, and in sanitary charge of our merchant fleet throughout the world. Of the total of 819, only 41 were Fellows of the College, while 778 were Members; so that, in round numbers, the Members were 95 per cent. of the whole, and that immense proportion were denied the right of voting in the administration of the College. Practically the College disfranchised all those who, having obtained its diploma, devoted themselves to the public service, however high their station, however spotless—nay, glorious—their record. In proof of this statement he would trouble the meeting with a few more figures. Of 47 Military Companions of the Bath and Companions of the Indian Empire in the profession, 27, or more than three-fifths, belonged to that College; but of the 27, only 6, or one-eighth of the whole, were Fellows; while 17, or nearly one-third, were disqualified as Members from taking part in the College administration. Yet among those so disfranchised were K.C.B.'s, honorary physicians and surgeons to Her Majesty, inspectors-general of hospitals and fleets, and men who to scientific attainments and consummate surgical skill had added proof of heroes' mettle in the Victoria Cross on their breasts." But Mr. Erichsen himself admits that "the value of the College diploma is rising in professional and in public estimation." Why, then, should Members who have taken so high a diploma be excluded from

Digitized by Google

the management of the College, while some few hundred of those who forty years ago took a diploma which must, according to Mr. Erichsen's own argument, have been lower in grade were nominated to a distinction which conferred the rights the more highly educated body now seeks? It is now full time that this anomaly ceased and the Members admitted to a position in which each one may take a personal interest, present or prospective, in the honour, dignity, and prosperity of the finest College in Europe.

With many apologies for our encroachment upon your space, We are, Sir, your obedient servants,

WARWICK C. STEELE,
WM. ASHTON ELLIS,
Hon. Secs. Association of Members of the Royal College of Surgeons, England.

THE PREVALENCE OF SHINGLES.

To the Editor of THE LANCET.

SIR,—I beg to endorse the observation in your issue of the 11th inst., by a "General Practitioner," on the present prevalence of shingles. During the last month I have seen three cases, and although I had not recognised the relationship between the heart trouble and the herpes, I may state that in one instance there was cardiac irregularity and the development of a basal souffle where the heart had previously been found normal. These symptoms have been greatly amended by treatment. In the other two cases my attention was not drawn to the heart. These three examples of herpes zoster had their distribution in the dorso-abdominal and lumbo-inguinal regions. In a fourth case, which has come under my notice, although not under my care, the three branches of the fifth nerves were the seat of pain, the eruption chiefly following the course of the ophthalmic division and consisting of large hæmorrhagic vesicles.

The house-physician of one of the Paris hospitals tells me that he also has seen several cases of herpes zoster quite recently in his out-patient department.

As regards the etiology of shingles, I have always considered it to be associated with gout. But the peculiarity of its distribution makes it difficult in this matter to give a categorical reply to the customary query of our patients, Is it in the nerves, or is it in the blood?

I am, Sir, yours faithfully,
Paris, Dec. 1886. OSCAR JENNINGS, M.D.

P.S.—Since writing the above I have seen a case of discrete generalised herpes, accompanied by headache, thirst, and fever—a typical example of what the French call *fièvre herpétique*. The subject was a little girl twelve years of age. It commenced with a sore throat (*angine herpétique*) which was followed by an eruption of pellucid vesicles, chiefly on the trunk, but also on the extremities, face, roots of the hair, and to an inconvenient extent around the anal and vulvar orifices. The symptoms have lasted three days, and have disappeared without any special treatment.

THE REPORT OF THE INQUIRY COMMITTEE OF THE LIVERPOOL MEDICAL INSTITUTION.

To the Editor of THE LANCET.

SIR,—I trust that, in fairness to Dr. Imlach, you will allow me to comment briefly on this remarkable document, and in some measure to reply to your own leading article upon it.

There are only two conclusions in this report of a positive kind. The first is to the effect that the Committee is very decided that no operative proceedings are required in ordinary cases of hæmatocele. No one has yet said anything to the contrary, and the insertion of this sentence can have only the effect of most unfairly prejudicing Dr. Imlach in the claim which is being made for a new trial in Casey *v.* Imlach. The second conclusion is that, in the opinion of the Committee, a body composed of officers of general hospitals, surgeons who are attached to special hospitals should refrain from certain lines of work which they have created, and resign them in favour of their less successful brethren of the general hospitals—a very generous proposal indeed, but not likely to be accepted. The whole of the rest of this impotent document is negative, and one omission is most suggestive. Preparations removed at the operations which were the subjects of investigation were offered to the Committee for examination, but not one word is said as to whether this examination was made, or as to its results. As to the pathological appearances which justify an operation for chronic ovaritis, for hydrosalpinx, or pyosalpinx, there cannot be a moment's hesitation in the pronouncement of an opinion by anyone at all conversant with these diseases. The Committee of the Liverpool Hospital for Women asked me to give them my opinion; I examined a number of specimens selected from the collection by myself at random, and in every instance the pathological appearances entirely justified the diagnosis and treatment of the case as recorded. That the Committee have failed either to assent to this proposition or to deny it is neither courteous to those who appointed them nor fair to those affected by their inquiry. Finally, it is perfectly evident from their method of inquiry — and it is also apparent in your article — that a little more judgment on one point would have been advisable. You say that "recovery from the operation is not a cure of the patient." That is precisely what we have been preaching for the last ten years. The cure of the patient, after suffering from pyosalpinx for ten years, as many have done, or from a bleeding myoma for twelve or fifteen years, like others, is often not effected by operation for three or four years. But the period of convalescence which had elapsed in any of these cases investigated by the Committee was, at the utmost, twenty months, and in many it was not more than eight months. The negative conclusions arrived at by the Committee are therefore quite unjustifiable and most unfair. Let us try any surgical operation by such a test and see how it will come out. I do not believe that a case of excision of the shoulder or elbow is ever cured under three years; whilst excisions of the wrist and knee take a still longer time to get satisfactory secondary results. Even an operation like cataract has a secondary convalescence to go through, which is often very protracted.—I am, Sir, yours truly,

Birmingham, Dec. 20th, 1886. LAWSON TAIT.

THE MEDICAL REGISTER.

To the Editor of THE LANCET.

SIR,—Great inconvenience has been caused by the refusal of the registrar of the Irish Branch of the Medical Council to register the degree of Master in Obstetrics until June next, and I am informed that the registrars for England and Scotland have also refused to register this qualification. As it is desirable to have an immediate decision, I have applied to the Branch for Ireland to direct the registrar to register all diplomas and degrees named in Section 20 that have been tendered to him.

The contention is that the Act does not come into force until June 1st, 1887. But certain provisions came into operation when the Act became law (June 25th, 1886), and have recently been carried out by the election of direct representatives; others, it is true, do not come into force until the "appointed" day (June 1st, 1887), but Section 20 has no reference to the "appointed" day, and therefore became law in June last. The section runs:—"The diploma of Members of the King and Queen's College of Physicians in Ireland, and the degree of Master in Obstetrics of any university in the United Kingdom, shall be deemed to be added to the qualifications described in Schedule A to the Medical Act, 1858."

In case the Irish Branch do not see their way to order these qualifications to be registered, I intend to test the legality of the refusal to register them, and bring the subject forward at the meeting of the General Medical Council in February. I am, Sir, very faithfully yours,

Dublin, Dec. 18th, 1886. CHAS. FREDK. KNIGHT, M.D.

THE ORIGIN OF TYPHOID.

To the Editor of THE LANCET.

SIR,—In your issue of Dec. 8th, 1883, you published a paper of mine on "The Genesis of Typhoid Fever from Cattle Manure in the Cape Colony," in which, after adducing cases in proof of the cattle origin of typhoid, I stated that I hoped similar evidence would ere long be brought forward by others. In an annotation in your issue of Nov. 20th, you refer to the very suggestive report of Dr. J. F. Allen of Pietermaritzburg on the cause of typhoid in that city. In his

Digitized by Google

report Dr. Allen, apparently as an independent observer, also attributes cases of typhoid to the presence of cattle manure used in Natal as fuel, and so far supports the observations I had made. But Dr. Allen has advanced the question a step farther. He infers that the excretions of some calves affected with a specific enteritis, the lesions of which on post-mortem examination corresponded with those of typhoid fever in the human subject, were the infecting material. The question is an important one, and it is to be hoped will be elucidated by further observation.

As far as my own observations went, after some thirty years spent in South Africa amongst a widely-scattered population, I was led to the conclusion that typhoid would be a very rare disease in the colony were it not introduced to the human subject anew from horned cattle, by means of their excretions affecting the air, water, and milk.

Much has been accomplished in this country for preventing the spread of typhoid from one human subject to another by disinfecting the excretions of patients suffering from the disease, and by improved sanitary arangements; but unless the bovine origin of the disease, if true, be proved and sufficiently recognised, the danger resulting will not be met and opposed as it might be.

I am, Sir, yours faithfully,

HENRY LAWRENCE, L.R.C.P., M.R.C.S.

Tunbridge Wells, Nov. 23rd, 1886.

THE APOTHECARIES' SOCIETY.

To the Editor of THE LANCET.

SIR,—I shall be obliged if you will insert the following matter in THE LANCET this week. At a Court of Assistants of the Society of Apothecaries held yesterday, Mr. R. Brudenell Carter was elected the representative of the Society on the General Council under the provisions of the Medical Act of 1886. In electing Mr. Brudenell Carter as their representative, the Society have chosen a gentleman who is not a member of the governing body, *and not even a member of the Society*, but only one of their licentiates; and they could not have paid a greater compliment to their licentiates than by adopting such a course. I have also to inform you that the Society have received up to the present time, from nearly 3000 of their licentiates, the most cordial approval of the action taken by the Society of Apothecaries in endeavouring to form a combination with the two Royal Colleges, and the strongest expression on the part of the licentiates of their wish to support the Society in the assertion of their rights and privileges.

I am, dear Sir, yours truly,

Dec. 22nd, 1886. JAMES R. UPTON, Clerk to the Society.

A NEW METHOD OF EXCISING THE KNEE-JOINT.

To the Editor of THE LANCET.

SIR,—In your journal of last week I notice a letter from Mr. C. B. Keetley, commenting on my paper on a New Method of Excising the Knee-joint, read before the Medical Society of London. I may say that, when preparing my paper, I was fully aware that Prof. Ollier *suggested* that in comminuted fractures of the knee-joint the fragments might be removed by a vertical incision, splitting the patella; but in excision for knee-joint disease he strongly advocates the H incision. It is perhaps to be regretted that I was unable to avail myself of Mr. Keetley's experience in this method of operating, having failed to find any published report of his cases. With reference to Mr. Keetley's assertion that the operation gives "comparatively limited and incommodious access to the joint, and especially to its posterior and lateral recesses," in my two cases and in the experiments I made on the dead body, a perfectly complete view was obtained of the interior of the joint, and as an explanation I can only suggest that Mr. Keetley has never performed the operation in the manner I described. I am unable to understand Mr. Keetley's preference for Professor Volkman's operation, or to agree with him as to the advantage of the transverse over the vertical incision; to my mind an incision that unnecessarily divides all the structures across the joint, although they can be "reunited by buried sutures," is hardly preferable to an incision which leaves them intact as regards their line of action. Finally, the case I exhibited to the Fellows of the Society was considered by highly competent authorities a decided success.

I am, Sir, your obedient servant,

Grosvenor-street, W. HERBERT W. ALLINGHAM.

P.S. I am rather at a loss to know how Mr. Keetley could have seen the report in your paper, which appears simultaneously with his letter.

NORTHERN COUNTIES NOTES.

(From our own Correspondent.)

THE DARLINGTON WORKHOUSE DRINK BILL.

THE above has been the heading of many letters and leading articles in the Darlington papers this autumn, but as the controversy may now be considered settled, it is right I should let you know about it, especially as it affected the practice of the union workhouse surgeon, Mr. G. Middlemiss, rather unfairly, to say the least of it, in the matter of his prescribing alcohol for his workhouse patients. No one acquainted with the practice of medicine will think anything the worse or better of one practitioner using alcohol in his practice as compared with another practitioner. Circumstances, such as seasons, times of epidemics, to say nothing of individuals, will always, it is to be hoped, prevent a hard-and-fast line being drawn in the prescribing of alcohol. Mr. Middlemiss was publicly accused of being extravagant in ordering drink to the poor patients in the infirmary. He pointed out to the Board that the quarterly account, which is printed and circulated to each of its members every three months, did not show what beer, wine, and spirits were consumed by the patients, although it might indicate what was sent to the "house." Nine months after an apparent larger drink bill, Mr. Middlemiss had to explain that it did not go to his patients. The master prepared a report on the consumption of drink, and also took the liberty of giving a report as to the hospital consumption and number of patients and deaths for the three years preceding Mr. Middlemiss taking office, showing that there had been about £15 worth more used than by that gentleman's predecessor. It was resolved that a subcommittee should go into the matter with an accountant. The result showed that Mr. Middlemiss had merely used about £5 worth during the previous three years, while the officers (four in number) had consumed £40 worth in the same period. He is shown to be not at all extravagant in the prescribing of alcohol, and that while he treated more than a thousand patients with a drink bill of £37 in three years. Mr. Middlemiss has more than cleared his reputation as to extravagance, and the moral of the controversy is that before a charge is made against the practice of a medical officer accusers had better be quite sure of their facts.

EPIDEMICS OF MEASLES AND PNEUMONIA.

At Alston, in consequence of the prevalence of measles, all the day and Sunday schools have been closed, and will remain closed until the new year. There have been as many as 150 cases reported in one day. At Hexham also the disease is very prevalent; but at Wylam Dr. Foulis reports an epidemic of pneumonia, chiefly among children. He states that he has had upwards of 100 cases, many of which were of a serious character, also affecting adults.

ACTION UNDER THE PHARMACY ACT AT SUNDERLAND.

At the Sunderland County Court on Thursday last an action was brought against a person who was carrying on a business as a chemist without being legally qualified, and a conviction with a fine of £10 was obtained. It is a great pity that some law cannot be set in action against the horde of herbalists, bone-setters, *et hoc genus omne*, with which we are infested in the north. If a quack calls himself a "herbalist," "botanic practitioner," or "bone-setter," it is a passport to public favour, and he escapes "scot free."

Newcastle-on-Tyne, Dec. 20th.

BEDFORD GENERAL INFIRMARY LEGACIES.—The following notices of legacies bequeathed to this institution have recently been received by the weekly committee—viz., a legacy by the late Samuel Taylor, Esq., St. Mary's Lodge, Potter-street, Bedford, £1050 new 3 per cents.; and another by the late Mrs. Ann Goodman, Toddington, Dunstable, £100.

EDINBURGH.

(From our own Correspondent.)

THE HEALTH OF CITY CHILDREN.

DR. J. B. RUSSELL of Glasgow, medical officer of health for that city, addressed a crowded audience last Saturday on "The Children of the City: what can we do for them?" He spoke in the first place of the crowded state of our cities and the tendency to rural depopulation, showing that in the last twenty-five years the town population in England has grown from 63 per cent. of the whole population to 68 per cent., and in Scotland from 61 per cent. to 69 per cent. This increased proportion is not fully explained by the more rapid rate of natural growth of population in towns, but is due to a large extent to a drafting in from rural districts of immigrants whose native robustness of constitution loses considerably by the transference. Referring to the conditions of city life which at present obtain, Dr. Russell commented on the general absence of open spaces and playgrounds, or of anything that makes a city look as though intended as a rearing-place for children. The modern idea of city life seemed to be to crowd together the adults as closely as they could be packed, and shake the children down into the chinks. Speaking of the vicious tendency exerted upon children by insanitation, parental delinquencies, and want of open space, he laid special stress on the desirability of providing playgrounds for their physical development and mental recreation. A child is impelled to play by a ceaseless natural instinct tending to its good, and not by the devil, as the landlord and policeman too often seem to think. He put these matters strongly to the artisan classes, who are the chief sufferers from the evils produced, and urged them to press these matters upon the attention of their municipal and Parliamentary representatives; and in the provision of spaces in cities for the purposes of recreation to see to it that the flower-bed did not too much encroach on space set apart for yet more important ends.

LORD WEMYSS ON UNIVERSITY REFORM.

On Monday a very influential gathering of Edinburgh graduates took place in the Royal Hotel at the annual general meeting of the Association of the General Council of the University of Edinburgh. Lord Wemyss, the President of the Association, occupied the chair, and gave an interesting address on the present phase of the question of University reform. He referred to the condition of Scottish Universities prior to reforms in which he had taken a warm interest from 1853 to 1858, and he sketched the rapid and extraordinary advances that have been made since the passing of the last Universities Bill in the latter year, referring to the increase in the number of professorial chairs, and to the amount of special University funds, endowments, &c., which have increased from £61,000 to over £300,000 in the last twenty-five years. That increase speaks well for the administration of these funds while solely in the hands of the Senatus; and on that account Lord Wemyss urged care and caution in the work of the Association, that it may result in reform, not in revolution. At the same time, it was evident that the graduates, numbering over 5000, should have some more direct influence in managing University matters than is at present the case. The General Council, their representative body, must have a greater voice than now in University government—to that principle he was fully committed,—but he was not quite prepared to say how far it should be extended. These remarks he made in the interests of the University above all. Nothing would be more unfortunate than that this should become a question of faction; and that success in obtaining their object, right though it were, should be looked on as a party victory. He hoped to see both sides agreeing to a reasonable solution of the matter in the best interests of all. The annual report of the Association was afterwards read. It was of an encouraging nature, and shows that the views of the Edinburgh and Glasgow Associations have been brought prominently before those interested in the matter, and that there is a greatly increased general feeling favourable to the line of action they have taken. Lord Wemyss has been elected President of the Association for the coming year, and Sir Risdon Bennett and Mr. R. W. Cochran-Patrick vice-presidents for the same period. On the motion of Dr. Heron Watson a committee was appointed to take charge of the interests of the Association in any legislation which may take place in regard to the Scottish Universities.

THE COLLEGE OF PHYSICIANS' LABORATORY.

The proposal made two years ago, and which has been under discussion twice since then, that a new experimental pathological laboratory should be established by the College of Physicians, seems at length to have a near prospect of consummation. A committee of the Fellows reported nearly a year ago as to the requirements of such an institution, and their suggestions, which are of a wise and practical character, will, if carried out, confer a considerable benefit upon the medical practitioners of Edinburgh. The object of the laboratory is to supply would-be workers in scientific subjects connected with medicine with facilities for carrying on original research in connexion with any interesting cases which occur in their practice or in dispensary work. The laboratory, which is to have a central situation, will be under the charge of a competent custodian, well trained in technical work, and ready to assist in, or to prepare materials for, any researches which may be in course of prosecution. A fine set of scientific apparatus for histological, physiological, and pathological investigations is also to be at the disposal of workers in the laboratory. The Royal College of Physicians have already conferred an incalculable boon on the Scottish medical world by the generous way in which their library is conducted and the care with which it is constantly kept up to date and maintained in a high degree of practical usefulness, and they certainly can find no better or more acceptable way of extending the useful work they are in a position to carry on than by establishing a laboratory such as that now about to take up an objective existence.

THE CHRISTMAS RECESS.

The lectures in the Edinburgh School closed on Wednesday, Dec. 22nd, and are to recommence on that day fortnight

Edinburgh, Dec. 22nd.

BELFAST.

(From our own Correspondent.)

THE ULSTER HOSPITAL FOR WOMEN AND CHILDREN.

A SALE of work, promoted on behalf of the funds of the above institution, was held on Dec. 9th and 10th. In consequence of the lease of the hospital buildings falling in, it became necessary for the executive to make internal alterations and improvements, the cost of which amounted to £300, and to defray this sum the bazaar was organised, the same ladies who had undertaken the arrangements on a former occasion again giving their services. The President of Queen's College (Rev. Dr. Porter) took the chair at the opening ceremony, and owing to the untiring exertions of Mrs. Porter the fête was a great success, and a considerable sum has been realised for the benefit of the hospital.

THE THRONE HOSPITALS, BELFAST.

On Tuesday, Dec. 14th, a large number of the friends of these charities assembled in the Throne Hospital to celebrate the first anniversary of the opening of the Consumption Hospital. From the reports I gather that the hospital has been opened since Dec. 19th, 1885, and since then all the beds have been continuously occupied, four for males and four for females, the number of patients treated being twenty-five. The board of management regret sorely that tenfold more accommodation is needed, as the number of applicants is out of all proportion to those admitted into the hospital. The board is profoundly anxious that Mr. Green's offer to build a new wing for consumptive patients should be made practicable by the generosity of friends in providing the endowment of £15,000. As the effect of the endowment fund was to provide for only six patients, it was moved that a subscription list be opened to meet the expenses of the two additional beds; this, however, was rendered unnecessary by Mr. Green giving another £1000. All present spoke of Dr. Lindsay, the physician in charge of the Throne Consumption Hospital, in the warmest terms.

PARIS.

(From our own Correspondent.)

TYPHOID FEVER.

THE French authorities are beginning to realise that typhoid fever reigning in an endemic manner is neither a normal sanitary condition nor a special dispensation of Providence against which it is useless to struggle. They have awakened to the fact that an average weekly mortality of fifty persons from this cause is very little creditable to the capital of a nation which professes to be the centre of scientific progress, and the question has at length been submitted to the investigation of experts. In a communication recently made to the Academy of Sciences, M. Brouardel traced the origin of an epidemic at Pierrefonds to the contamination of drinking-water by the contents of neighbouring cesspools. In each house infected the bacilli said to be characteristic by Eberth, Gaffky, Cornil, and others were found in the water, and upon culture exhibited the typical sporulation. Difference of opinion as to the specificity of these micro-organisms having arisen, comparative cultures were made from the blood removed from the spleen of a patient suffering from typhoid, with identical results. It is perhaps somewhat late in the day to discover the danger of impure drinking-water—a fact which is familiar to every intelligent Londoner; but the specificity of these particular bacilli being still *sub judice*, M. Brouardel's contribution on the subject is not devoid of interest.

THE CURABILITY OF ALCOHOLIC CIRRHOSIS.

A short time since M. Troisier communicated a case to the Société Médicale des Hôpitaux in which the ascites resulting from cirrhosis of the liver had disappeared under the influence of iodide of potassium and strychnia, and the visceral lesion itself had seemed to be cured. In the discussion which ensued, it was pointed out that ascites sometimes passes away spontaneously in the course of a cirrhosis, and, on the other hand, the affection of the liver may go through all its phases without giving rise to peritoneal effusion. M. Troisier now goes further. He asks whether there does not exist a particular form of alcoholic cirrhosis in which the lesion, stopping short of destruction of the liver-cells, is susceptible of retrogression; and he relates another case in support of this hypothesis. A confirmed drinker, aged sixty-eight, was under the care of a colleague, and presented all the symptoms of hepatic cirrhosis. Between the months of December and September 165 litres of fluid were removed by tapping at different times. At the present time the peritoneal cavity is empty, the liver slightly enlarged, and the patient in excellent health. M. Bucquoy said that he had seen several similar cases, and he entertained no doubt that other members of the Society had had a like experience.

PLEURAL EFFUSION IN INFLUENZA.

A case was related by M. Roques at the same Society, in which influenza in a young girl, nine years of age, characterised by severe cerebral symptoms, headache, earache, stupor, and feverishness, was terminated on the tenth day by a pleural effusion, followed by speedy restoration to health. The child was not rheumatic, nor were her parents. In the discussion that followed, M. Dreyfus reminded his hearers that the late Professor Gubler was in the habit of calling the attention of students to the effusions which occur in the course of different inflammatory diseases of the respiratory passages. M. Guyot mentioned a publication by Dr. Gibert of Havre, on seven cases of pleuritic effusion complicating influenza. M. Desnos observed that during the war he had frequently seen pleurisy consecutive to influenza. M. Roques, in reply, said that he had not intended to discuss the pleuritic symptoms that sometimes complicate the affection under consideration. He wished to call attention to the transitory pleural effusions which are seen at the termination of the malady, and which he considers to be "critical" manifestations of the nature of a fluxion, and similar to what occurs in the respiratory tract.

The eminent anatomist, M. Sappey, has been elected a member of the Academy of Sciences in the place of the late M. H. Milne-Edwards.

NEW YORK.

(From our own Correspondent.)

AMERICAN PUBLIC HEALTH ASSOCIATION.

THIS Association held its annual meeting recently at Toronto, Canada. This is the first meeting of the Association beyond the bounds of the United States, and proved to be a very successful session. Sanitary administration is comparatively a new feature of State and municipal governments in Canada, and the discussions of the Association will undoubtedly give a new and vigorous impulse to the agitation for reform in the provinces. The frightful havoc which small-pox created in Montreal owing to the want of an efficient board of health, having suitable powers, was a lesson which has not passed unheeded. The citizens of Toronto, and the medical profession of Canada welcomed the Association, and it is believed that the influences of the meeting will greatly aid those who are labouring to establish throughout the Dominion sanitary government.

MEDICAL COLLEGES.

The Medical Colleges are now in full operation, and with increased numbers of students. So great is the pressure for sittings in two colleges that the struggle for seats has become very exciting. The methods of instruction still remain unchanged. The old practice of assigning a course of lectures on each branch to a single professor continues, notwithstanding the great expansion of each department of the medical sciences. Nor is the term of teaching lengthened except in one school; five months covers the year of instruction. It follows that the student has to gain a knowledge of his profession under great difficulties, and largely by dint of his own almost unaided efforts.

MEDICAL EDUCATION.

A propos of this subject is the appearance of the annual report of the Illinois State Board of Health, with its analysis of the medical colleges of the United States. The State of Illinois has taken a most enlightened view of its duties to the citizens, and by a special "Medical Practice Act" empowered the Board of Health to inquire as to the educational qualifications of medical practitioners, and to take compulsory measures to prevent the uneducated from engaging in practice. The Governor says of the law:—"It was to protect the lives, the health, the morals, and the property of the people of the State from the shameless depredations of swindlers and adventurers, who, by all manner of false representations and deceptive promises, were taking advantage of the misfortunes of the people in sickness and ailments of all kinds to still further injure their health, endanger their lives, and rob them of their money." The board has performed its duty faithfully. During the first two or three years not far from 2000 practitioners were found disqualified in about 7000, and forbidden to practise in the State. From the present report it appears that the annual increase of medical men in this country is over 5½ per cent., while the annual increase of population is less than 2 per cent. In answer to the question as to what becomes of this excess of medical men, the secretary shows, by reference to certain statistics of the profession in Illinois, that between the years 1880-86 7 per cent. of the physicians left the profession and engaged in other pursuits. He states that there are from 1500 to 2000 more physicians in Illinois than are necessary, and who are earning a livelihood legitimately. What is true of that State he believes is true of every State in the Union. The report as a whole is a complete exhibit of the present methods of instruction in the medical colleges of the entire country.

THE SURGEON-GENERAL OF THE ARMY.

There has been a severe struggle in the Army Medical Corps to secure the office of Surgeon-General, made vacant by the retirement of General Murray, who had reached the age required by law. The appointment rests with the President, who is not limited by seniority, but may select any one of the corps. The choice fell upon Surgeon John Moore, who was on duty at San Francisco, and hence far removed from the capital and the scene of active politics. Dr. Moore is a most capable and worthy officer, held high positions during the late war and his appointment is well received.

THE ACADEMY OF MEDICINE.

Medical endowments are quite in order now in this country. Recently the Academy, the central medical society of the city, has received $100,000, of which $75,000 were given by the widow of the late Dr. Hosack, and $25,000 by the widow of the banker, Mr. Woelshoffer. The Academy has now one of the best of libraries, receives all the medical journals of the world, has eight sections actively at work as societies, and in every respect is the centre of medical interest. It is now proposed to build a new Academy better adapted to the future wants of the profession.

THE NEW YORK STATE MEDICAL ASSOCIATION.

This Association represents those medical men who are popularly termed the "old Coders," or those who stand firmly by the code of ethics of the American Medical Association. The meeting was well attended. One session was devoted to the discussion of shot and stab wounds of the abdomen, and excited great interest.

New York, Nov. 26th.

Obituary.

DR. EBEN. WATSON.

DURING the last few years some of the most eminent of old Glasgow practitioners have been gathered to their rest. John Gibson Fleming went first, the clear-headed, active representative of the Faculty in the General Medical Council. Andrew Buchanan next, in the evening of his days in learned leisure, ripe with wisdom and honour. Six months ago Robert Scott Orr, in seemingly perfect health, was suddenly struck down while reading the evening paper in his drawing-room. And now the west of Scotland mourns the loss of Eben. Watson, after an obscure and trying illness of eighteen months' duration.

Dr. Watson was the son of a well-known Glasgow practitioner—Dr. James Watson,—and early adopted medicine as his calling under his father's fostering care. Having attained his degree at the University of Glasgow, the subject of this notice specially studied surgery in Paris, and in London under Sir William Fergusson, with whom he kept up a life-long friendship. Returning to Glasgow in 1848, he joined his father in practice, and at an early stage of his career was elected a surgeon of the Royal Infirmary, a position which he held until within two years of his death. During these years he was known as a brilliant and fearless surgeon. Nature had gifted him with all the attributes for this. He was quick in the diagnosis of cases and eager to fulfil every duty to which he was called. He had a deft, neat hand, which guided the knife with skill and ease. In the operating-room he was seen at his best—calm, self-possessed, never timid, prepared for any emergency. He was regarded as a conservative surgeon, yet he never shrinked from large and grave operations; and when the patient was under chloroform dashed his hand through his hair and drew himself up for his task. His thorough confidence was shared by those who witnessed him, for all knew that, come what might, Watson would not fail. In his readiness of resource he seemed to equal Syme.

Dr. Watson held many public offices. He was for years an examiner in surgery for the Faculty, and occupied the president's chair in that body for two years. During his term of office, and after this had expired, he took a warm and keen interest in its welfare. By his wise administration he materially assisted in saving it from the doom of extinction, which some of its enemies openly desired. As a pleader for its existence he interviewed with tact Secretaries of State, and by his comprehensive and lucid statements made a favourable impression on those in authority. He was attached also to Anderson's College as Professor of Physiology, a position which he held for twenty-six years. He did not write out his lectures, but, from his thorough knowledge of the subject, was able with ease and fluency to interest and instruct the students.

When the Professorship of Surgery in the University became vacant by the removal of Mr. Lister to Edinburgh, he strove earnestly to obtain the chair. In this he was defeated by Dr. George Macleod; yet though a life's wish was thus frustrated, he ever took a warm interest in the University, and rejoiced in the growing prospects of his *alma mater*.

His contributions to the medical journals were many, his first communication being given to the Faculty, when he obtained the Fellowship in 1849, and its title was "On the Organ of the Human Voice." His researches on Calabar Bean and its utility in Tetanus were very thorough, and commanded the attention of leading therapeutists in this and other countries. His book "On Topical Medication of the Larnyx" was an interesting addition to the treatment of diseases of the throat. We believe that he left a half-finished article on Aneurysm, which was intended for publication in THE LANCET.

In his private life Dr. Watson was much respected and loved by those who knew him. He has left many friends, who will miss his practical advice and wise counsel. He was outspoken on his likes and dislikes, but no mean or underhand action characterised his life. He was a kind husband and an honoured father. He is survived by his widow, one son, and four daughters.

ROBERT DYER LYONS, M.D., D.L.

ON Friday morning, the 17th inst., Dr. Lyons, while on his way to the Richmond Hospital, Dublin, was seized with a sudden attack of illness. He was seen holding on to a railing in Molesworth-street by a physician who resided near him, who fortunately happened to be passing, and who had him conveyed to his residence in Merrion-square. It was then found that he was suffering from an attack of paralysis, due to cerebral hæmorrhage; and although at first his medical attendants, it is stated, entertained no serious apprehensions, yet early on Saturday morning he was considered to be in a most precarious state, and died the following day.

Dr. Lyons, who was in his sixty-first year, was a physician of eminence, and his sudden and untimely decease is a matter of sincere regret to a large circle of friends. He was the son of the late Sir William Lyons, mayor and high sheriff of Cork, and was born in 1826. He graduated in Arts and Medicine in the University of Dublin, and during the Crimean War held the appointment of pathologist-in-chief to the British Army. The deceased was a Fellow of the College of Physicians in Ireland, a member of the General Medical Council, physician to the Richmond Hospital, professor of the practice of medicine in the medical school of the Catholic University, visiting physician to Maynooth College, and a member of the Senate of the Royal University of Ireland. Dr. Lyons represented Dublin in Parliament, on Liberal principles, for several years, and was much respected by all parties in the House of Commons. He published a work on Fever in 1880, and contributed papers on medical subjects to various periodicals.

CRIDLAND CROCKER FIELD, M.D.

WE regret to record the death of Dr. C. C. Field, which occurred at his residence in Easton, Northampton Co., U.S.A., on the 26th ult. The deceased, who was born in 1817 received his professional education at the University of Pennsylvania, from which institution he graduated with honour in 1837. In 1838 he took up his residence in Northampton County, and shortly afterwards settled in Easton, where for the past fifty years he has attended to an extensive practice, surgical and medical. Dr. Field performed many of the most difficult and delicate operations in surgery, amongst them being the removal of a cervical tumour, with ligation and excision of a considerable part of the jugular vein; excision of the entire femur, an operation unique in the annals of surgery; excision of the entire radius, and extirpation of the parotid gland, the latter operation being performed several times. These achievements placed Dr. Field in the front rank of modern surgeons, and his death will be keenly felt, not only throughout the district in which he resided, but by the inhabitants of the whole county.

DR. J. EWART has been elected President of the Brighton, Hove, and Preston Dental Hospital, in the place of the late Mr. Alderman D. Smith, senior M.P. for the borough.

Medical News.

UNIVERSITY OF LONDON.—The following candidates have passed the recent M.D. Examination:—

Batten, Rayner Derry, B.S., St. Bartholomew's Hospital.
Berry, Frederick Haycraft, Guy's Hospital.
Booth, Edward Hargrave, Guy's Hospital.
Boswell, John Irvine, Guy's Hospital.
Brock, James Harry Ernest, B.S., University College.
Calger, Frederick Foord, B.S., St. Thomas's Hospital.
Calvert, James, B.A., B.Sc., St. Bartholomew's Hospital.
*Cave, Edward John, St. Bartholomew's Hospital.
Claremont, Claude Clarke, B.S., University College.
Cockey, Edmund Percival, St. Mary's Hospital.
Elgood, Charles Reginald, B.S., University College.
Fox, Robert Fortescue, London Hospital.
Glover, John Philip, St. Thomas's Hospital.
Goodall, Edward Wilberforce, Guy's Hospital.
Gross, Charles, B.S., Guy's Hospital.
Handfield-Jones, Charles Montague, St. Mary's Hospital.
Hewer, Joseph Langton, B.S., St. Bartholomew's Hospital.
Hinds, Frank, B.S., University College.
Lankester, Herbert Henry, St. Thomas's Hospital.
Maddison, William Thomas, King's College.
Mott, Frederick Walker, B.S., University College.
Pearce, Walter, B.S., B.Sc., St. Mary's Hospital.
Powell, John Joseph (Gold Medal), University College.
Price, Alfred Edward, B.S., Guy's Hospital.
Purslow, Charles Edwin, Birmingham.
Rice, Edward, St. Bartholomew's Hospital.
Smith, Kenneth Rawlings, B.S., University College.
Spencer, Herbert Ritchie, B.S., University College.
Turner, Alfred Jefferis, University College.
Wooldridge, Leonard Charles, D.Sc., Guy's Hospital.
Worthington, Sidney, Guy's Hospital.

LOGIC AND PSYCHOLOGY ONLY.

Batterham, John Williams, B.S., Westminster Hospital.
Cook, Augustus Henry, University College.
Dingley, Arthur William, University College.
Forsbrook, William Henry Russell, Westminster Hospital.
Heath, William Lenton, B.S., St. Bartholomew's Hospital.
Jefferson, Arthur John, B.S., St. Thomas's Hospital.
Shove, Edith, London School of Medicine and Royal Free Hospital.
Slater, Druce John, St. Bartholomew's Hospital.
Williamson, Richard Thomas, B.S., Owens College.

* Obtained the number of marks qualifying for the Gold Medal.

The following passed the M.B. Examination for Honours:—

MEDICINE.

FIRST CLASS.

Washbourn, J. Wychenford (Scholarship and Gold Medal), Guy's Hospital.
†Gow, William John (Gold Medal), St. Bartholomew's Hospital.

SECOND CLASS.

Gardner, Henry Willoughby, St. Bartholomew's Hospital.
Wild, Robert Briggs, Manchester and Owens College.
Johnson, Raymond, University College.

THIRD CLASS.

Hutton, John Stuart, St. Thomas's Hospital.
Voelcker, Arthur Francis, University College.

OBSTETRIC MEDICINE.

FIRST CLASS.

Gardner, Henry Willoughby (Scholarship and Gold Medal), St. Bartholomew's Hospital.
Johnson, Raymond (Gold Medal), University College.
†Dobson, Leonard Charles Talbot, St. Bartholomew's Hospital.
Eq. { Gow, William John, St. Bartholomew's Hospital.
Eq. { Washbourn, John Wychenford, Guy's Hospital.
Carless, Albert, King's College.

SECOND CLASS.

Eq. { Gabriel, Leonard Maurice, St. Bartholomew's Hospital.
Eq. { Smith, John Anderson, St. Bartholomew's Hospital.
Eq. { Voelcker, Arthur Francis, University College.

FORENSIC MEDICINE.

FIRST CLASS.

Johnson, Raymond (Scholarship and Gold Medal), University College.
†Washbourn, John Wychenford (Gold Medal), Guy's Hospital.
Burghard, Frédéric François, Guy's Hospital.

Eq. { Young, Charles Wheeler Forrest, St. Bartholomew's Hospital.
Trevelyan, Edmond Fauriel, B.Sc., St. Bartholomew's Hospital.
Corbin, Eustace Rhodes St. Clair, University College.

† Obtained the number of marks qualifying for the University Scholarship.
‡ Obtained the number of marks qualifying for a Gold Medal.

The following have passed the M.S. Examination:—

LOGIC AND PSYCHOLOGY ONLY.

Roeckel, Waldemar Joseph, St. Bartholomew's Hospital.

The following have passed the B.S. Examination:—

FIRST DIVISION.

Burghard, Frédéric François, Guy's Hospital.
Elliott, John, B.Sc., St. Bartholomew's Hospital.
Goodall, Edwin, Guy's Hospital.
Halstead, George Ezra, B.A., B.Sc., Guy's Hospital.
Hart-Smith, Franke Chamberlain, University College.
Muspratt, Charles Drummond, Guy's Hospital.
Spencer, Walter George, St. Bartholomew's Hospital.
Swain, James, Westminster Hospital.
Vernon, John James Dean, Guy's Hospital.

SECOND DIVISION.

Bahadhurji, Kaikhosro Nasarvanji, University College.
Johnson, Raymond, University College.
Taylor, Alfred Ernest, Guy's Hospital.
Voelcker, Arthur Francis, University College.
Washbourn, John Wychenford, Guy's Hospital.

UNIVERSITY OF OXFORD.—At a congregation held on the 17th inst., the degree of M.D. was conferred on

Archibald Edward Garrod, Christ Church.

UNIVERSITY OF CAMBRIDGE.—The following degrees have been conferred:—

BACHELOR OF SURGERY.—Bond, John's; Burd, Caius; G. F. A. England, Caius; C. S. Evans, Clare; H. R. Jones, John's; Kerr, John's; Lipscomb, Caius; H. Manby, Cavendish; Shore, John's; Sibley, Pembroke; F. W. Smith, Caius; A. S. Taylor, Pembroke; Wilde, Clarke.

BACHELOR OF MEDICINE.—Bond, John's; Dickinson, Peterhouse; Evelyn, Caius; Fitzgerald, Caius; H. Fox, Cavendish; W. P. G. Graham, Caius; Hamer, Christ's; H. A. Haviland, Pembroke; W. J. Hill, Jesus; Jolly, Caius; A. L. Marshall, Clare; Morrice, Trinity; Nason, Downing; Nicholls, John's; Sidebotham, Caius; Skelding, Caius; Tatham, Clare; Thornton, Christ's; C. H. Walter, Jesus; Webster, Caius; M. S. Wilson, Pembroke; Winfield-Roll, Christ's.

UNIVERSITY OF DUBLIN.—The following degrees have been obtained at the recent examinations of the University:—

LICENTIATE IN MEDICINE.—Daniel Conway.

BACHELOR IN MEDICINE.—Thomas Guy Alexander, Alan Bell, Edmund B. Delacherois, Henry Disney, Benjamin Banks Ferrar, Edward Wallace Hamilton, John Patrick Henry, James Graham Hojel, Thomas Hopkins, Alfred Hancock Middleton, Robert L. McAdam, William E. C. Murphy, G. J. R. Nickson, John William O'Brien, John O'Conor, William M. Russell, John Simpson, Thomas Edward Smyth, John B. Walter, Richard M. Wilson.

BACHELOR IN SURGERY.—Alan Bell, Edmund B. Delacherois, William L'Estrange Eames, Benjamin Banks Ferrar, John P. Henry, James Graham Hojel, Thomas Hopkins (*stip. cond.*), Robert L. McAdam, L. M. McIntosh, Alfred Joseph McNally, William E. C. Murphy, G. J. R. Nickson, John William O'Brien, Thomas Edward Smyth, Richard Mervyn Wilson.

DOCTOR IN MEDICINE.—James De Burgh Griffith, Charles Nelson Gwynne, Thomas Lyndon, Charles Crawford Mayne, Robert L. McAdam, L. M. McIntosh, Alfred Hancock Middleton, Richard Nunn, John F. Tatham (*stip. cond.*), John Bellett Walter, Hugo Woods, Augustus Warren Woodroffe.

COLLEGE OF PHYSICIANS IN IRELAND.—At the December examinations the following obtained the licences in Medicine and Midwifery of the College:—

MEDICINE.—Thomas Downey Ambrose, Thomas George Barton, Christopher Venning Burgess, E. John Byrd, Thomas Augustus Connellan, Henry Grattan Day, Herbert Edward Bulman Dickson, St. Leger John Edmundson, Joseph Ellison, John Garth, William Greene, I. C. Hartford, Charles John Hastings, John Patrick Howe, William A. Kelly, Peter McSwiney, Joseph Edward Midgley, Andrew Edmund Murphy, Herbert Murray Norris, Bartholomew Bull Pattulo, Thomas Joseph Rossiter, Jeremiah B. Ryan, William Joseph Shee, Alfred Frederic Smith, George Herbert Spencer.

MIDWIFERY.—Thomas D. Ambrose, Thomas G. Barton, Edward J. Byrd, John Garth, William Greene, Charles J. Hastings, John P. Howe, Peter McSwiney, Joseph E. Midgley, Andrew E. Murphy, Herbert Murray Norris, Bartholomew B. Pattulo, Thomas J. Rossiter, Jeremiah B. Ryan, Ross Vincent Smyth, and George P. Williams.

The undernamed has been admitted a Member:—

William Hughes, Surgeon, R.N.

ROYAL COLLEGE OF SURGEONS IN IRELAND.—The following gentlemen have passed the Third Professional Examination for the Letters Testimonial under the new scheme:—

Alfred Bewley, C. E. Boyce, J. J. Byrnes, Wm. Cremin, Edward Frazer, J. F. Greene, T. A. Goodchild, R. Hickie, C. Hughes, C. D. Jones, P. P. Keane, J. F. Mannix, J. Martin, J. McGinne, J. O'Connor, P. O'Dwyer, J. O'Sullivan, J. H. Swan, P. J. Ward.

Of fifty-three candidates, seventeen passed.

At a recent examination the following gentleman obtained the Fellowship of the College:—

William Dobbin.

SOCIETY OF APOTHECARIES.—The following gentlemen passed the examination in the Science and Practice of

Digitized by Google

Medicine, Surgery, and Midwifery, and received certificates to practise, on the 9th inst.:—

Adams, Percy Targett, Ashford-road, Maidstone.
Brown, E. Vipont, M.R.C.S., Lady Margaret-road, Holloway.
Carey, Basil de Beauvoir, Tavitou-street, Gordon-square.
Challenor, William, Alfred-place, Gower-street.
McLean, W. Walker Laroche, Ellerslea, Fulham-park-gardens.
Smith, Alfred Alexander, L.R.C.P. Ed., Railton-road, Brixton.

Passed on the 16th inst.:—

Gravely, Harry, Gloucester-crescent, Regent's-park.
Naumann, John Chas. Francis, Woelman. Eilenburg, Germany.
Sunder, Charles Edward, M.R.C.S., The College, Regent's-park.
Williams, John Thomas Creswick, Dolgelly, North Wales.

LONDON HOSPITAL.—Mr. Robert Loder has contributed £500 to the funds of this hospital.

AT a meeting held at Leeds on the 8th inst., it was decided to form a local company of the Volunteer Medical Staff Corps.

THE Duke of Westminster has sent £500 to the funds of the Chester Infirmary, being the proceeds of the entrance fees paid at Eaton Hall by strangers for the privilege of inspecting the new hall.

The Christmas festival on behalf of Mr. Stevenson's Homes was held in Exeter Hall on the 22nd inst. Upwards of £300 was contributed towards a jubilee fund of £10,000 which it is proposed to raise.

THE Board schools and denominational elementary schools at Barnsley have been closed by order of the Sanitary Committee of the Town Council, on account of the prevalence of fever in that town.

MATER MISERICORDIÆ HOSPITAL, DUBLIN.—A fancy dress ball will be held in aid of the funds of this institution on the 19th prox., in the new Concert Hall, Dublin.

POISONING BY COAL GAS.—Owing to an escape of coal gas, five of a family at Carrick-on-Suir, consisting of eight persons, died this week, and the remaining three are in a critical condition.

EAST SUSSEX INFIRMARY.—The bazaar, opened at St. Leonards a few days since by Viscount Hampden has, it is stated, resulted in a net gain to the funds of the above infirmary of something like £1800.

THE Secretary of the Birmingham Hospital Sunday Fund reported on the 16th inst. that this year's collection amounted to £4612, as compared with £5145 at the collection for the General Hospital three years ago, and as compared with £4773 last year.

A VENERABLE PRACTITIONER.—According to Spanish journals there is at present in Logroño a medical man, Don Rosendo Recondo, still in considerable practice and in the enjoyment of good health, who if he lives till next February will be 100 years of age.

THE DRAINAGE OF RICHMOND.—The Richmond Select Vestry have received a communication from the Local Government Board, stating that their application for sanction to borrow £100,000 for the execution of a joint scheme of sewerage and sewage disposal for the parish and rural sanitary district (which includes Richmond, Mortlake, Barnes, Kew, and Petersham) has been granted.

THE GUILD OF ST. LUKE.—In St. Thomas's Hospital Chapel, on Tuesday, Dec. 7th, at 5.30 P.M., was held the first of a series of services, which the council are anxious to hold in the chapels of hospitals to which medical schools are attached, with a view to bring before medical men and medical students the objects of the Guild. There was a large congregation, composed for the most part, as was intended, of medical men and students.

PHONOGRAPHIC JUBILEE.—An International Shorthand Congress is to be held in London next year. The chief objects of the congress are to celebrate at once the jubilee of phonography (Pitman's system) and the tercentenary of modern shorthand. Mr. T. A. Reed is the chairman of the Jubilee Executive Committee, and Mr. Gurney-Salter the chairman of the Tercentenary Executive Committee. It is interesting to observe that Dr. Timothy Bright, a London physician, printed his "Characterie: an art of short, swift, and secret writing by character," in the year 1588. And he may be regarded as the founder of the modern method of shorthand.

CHEMISTRY OF THE ALKALOIDS AND ALBUMINOIDS.—At the City and Guilds of London Institute, Central Institution, Exhibition-road, S.W., Professor Armstrong, Ph.D., F.R.S., is about to deliver a course of some twenty lectures on the Chemistry of Nitrogen and its Compounds, with special reference to the recent Investigations of the Alkaloids, Albuminoids, &c. The course will commence on Jan. 27th next.

AN OVERCROWDED INFIRMARY.—At a meeting of the Lambeth Board of Guardians on the 15th inst. the medical officer reported that there were thirty-nine patients over the proper number in the men's side of the infirmary, and in the women's side there was a surplus of seven. The advisability of providing further accommodation was discussed, and the matter was ultimately referred to the Infirmary Committee.

VICTORIA UNIVERSITY.—The following appointments to vacant examinerships were made by the Council at a meeting held on December 16th, 1886:—External Examiner in Botany: W. R. M'Nab, M.D., M.R.C.P., F.L.S., Professor of Botany in the Royal College of Science, Ireland. External Examiner in Medicine: F. T. Roberts, M.D., F.R.C.P., M.R.C.S., B.Sc., Professor of Clinical Medicine in University College Hospital, London. External Examiner in Materia Medica and Pharmacy: Matthew Hay, M.D., C.M., F.R.P.S.E., Professor of Medical Jurisprudence in Aberdeen University.

DEATH FROM SEWER AIR.—An inquest was held at Liverpool on the 8th inst. on the body of a youth who had been employed as apprentice to a plumber. The deceased had in the previous week been engaged in repairing some pipes connected with other pipes which led into a sewer. A good deal of gas came through the pipes, and the deceased complained of pain and sickness. He went home, feeling ill, and died in forty hours. The medical evidence was to the effect that death was due to the inhalation of sewer air, and the jury returned a verdict in accordance with this estimony.

TOYS FOR HOSPITALS.—On the 18th and 20th inst., an exhibition was held at Willis's Rooms of the home-made and other toys sent by the readers of *Truth* for distribution among the children in the London hospitals, workhouses, district schools, orphanages, and other public institutions at Christmas. This is the seventh annual exhibition of the kind, and the number of exhibits this year was upwards of 15,000, as compared with 1000 in the first year. In addition to the toys, 9000 sixpences, 14,000 crackers, and 2000 pots of jam will be distributed. Claims have been sent in on behalf of 14,150 children.

PRESENTATIONS.—On the 22nd inst., at a meeting of the contributors to the local expenses fund in connexion with the British Medical Association's Congress at Brighton in August last, the Mayor of Brighton was presented with an engraved silver tea-tray, bearing a suitable inscription, in acknowledgment of his generous and valuable aid in promoting the success of the Congress. On the 20th inst. a deputation of nurses from the Edinburgh Royal Infirmary presented Dr. Joseph Bell with a handsome oak writing-table and chair, and a valuable silver candelabrum, subscribed for by nurses in the institution and also by nurses now in other places in Edinburgh and abroad, who were trained under Dr. Bell. The occasion of the presentation was the recent retirement of Dr. Bell after fifteen years' service on the surgical staff of the infirmary.

THE METROPOLITAN PROVIDENT MEDICAL ASSOCIATION.—The committee appointed at the recent conference at the Society of Arts have held a preliminary meeting, when Sir T. Spencer Wells, Bart., was appointed chairman, and it was resolved to invite the following to join the committee: Drs. Walker Smith, Gilbart Smith, Meadows, A. Carpenter, Steele, Ord, J. Gordon, Ford Anderson, G. Stoker, Steavenson, Dunbar Walker, Ducat, A. Grant, and Campbell Pope; Messrs. E. C. Barnes, Keele, Dickenson, and Ernest Hart. The committee will also include the following lay members: Sir T. Fowell Buxton, Mr. F. D. Mocatta, Mr. H. N. Hamilton-Hoare, and Mr. Claude Montefiore. The committee invite communications from medical men and others interested in the management of the Metropolitan Hospitals and the medical treatment of the industrial classes, which should be sent to Mr. W. G. Bunn, secretary of the Association, 5, Lamb's-conduit-street, W.C. The next meeting of the committee will be held on Jan. 11th, 1887.

Medical Appointments.

Intimations for this column must be sent DIRECT *to the Office of* THE LANCET *before 9 o'clock on Thursday Morning at the latest.*

BALFOUR, ANDREW, M.D.Ed., has been appointed Medical Officer for the Parish of Duddingston.

BOOTH, J. MACKENZIE, M.A., M.B., C.M.Aber., has been appointed Chloroformist to the Aberdeen Royal Infirmary, vice P. Blaikie Smith, M.D., resigned.

BRICKWELL, H. T., M.R.C.S., L.S.A., has been appointed Deputy Medical Officer for the Chigwell District of the Epping Union.

CONOLLY, STEPHEN F., M.R.C.S., L.S.A., has been appointed Medical Officer to the Kensal Town Branch of the Metropolitan Provident Medical Association, vice A. Dunbar Walker, M.D., resigned.

DAVIDSON, J. M'KENZIE, M.B., C.M.Aber., has been appointed Ophthalmic Surgeon to the Aberdeen Royal Infirmary, vice A. Dyce Davidson, M.D., deceased.

GARDNER, WILLIAM THOMAS, M.B.Lond., M.R.C.S., L.R.C.P., has been appointed House-Surgeon to the West London Hospital, Hammersmith.

HARPER, ALEXANDER, M.B.Dur., M.R.C.S., has been appointed Resident Medical Officer to the Victoria Hospital for Children, Chelsea.

HARRIES, J. FRAIL, L.R.C.P. Lond., M.R.C.S., L.S.A., has been appointed House-Surgeon to the Salop Infirmary, vice R. H. Russell, resigned.

HENRY, JOHN P., Med. Sch., B.A., M.B., B.Ch.Dub., has been appointed Demonstrator of Anatomy in Carmichael College of Medicine, Dublin.

LAWSON, G., F.R.C.S., has been appointed Consulting Ophthalmic Surgeon to the Hospital for Epilepsy and Paralysis, Regent's-park, vice White Cooper, deceased.

LYON, THOS. GLOVER, M.A., M.D.Cantab., M.R.C.P.Lond., has been appointed Physician to the North London Hospital for Consumption and Diseases of the Chest.

MORGAN, W. P., M.R.C.S., L.S.A., has been appointed Medical Officer and Public Vaccinator for the Third District of the Eastbourne Union, vice Tuck, deceased.

SCALLON, ERNEST O., M.R.C.S., L.S.A., has been appointed Medical Officer for the Templecombe District of the Wincanton Union.

TURNER, FREDERICK, M.R.C.S., L.S.A., has been reappointed Medical Officer of Health for Buxton.

WADE, CHARLES, M.R.C.S., L.S.A., has been appointed Medical Officer for the Chudleigh District of the Newton Abbot Union.

WHEATCROFT, SAMUEL H., M.R.C.S., L.R.C.P.Ed., has been appointed Medical Officer for the Brandesburton District of the Skirlaugh Union.

WRIGHT, ALFRED, M.R.C.S., L.S.A., has been reappointed Medical Officer of Health for Romford.

Births, Marriages, and Deaths.

BIRTHS.

BUCHANAN.—On the 17th inst., at High-street, Chatham, the wife of Arthur Buchanan, M.D., of a son.

CATON.—On the 16th inst., at Croxteth-road, Liverpool, the wife of Richard Caton, M.D., of a daughter.

CLARKE.—On the 15th inst., at Winona, Barrowgate-road, Chiswick, the wife of Fincastle G. B. Clarke, M.D., of a son.

DINGLE.—On the 20th inst., at Bunhill-row, E.C., the wife of William Alfred Dingle (prematurely), of a son, who survived his birth only a few hours.

JOHNSON.—On the 14th inst., at 7, Den-crescent, Teignmouth, South Devon, the wife of George Herbert Johnson, M.R.C.S., L.R.C.P.Ed., of a daughter.

MARRIAGES.

FENWICK—FENWICK.—On the 16th inst., at Holy Trinity Church, Wimbledon, by the Rev. Wm. Reed, M.A., Edwin Hurry Fenwick, F.R.C.S., to Annie, youngest daughter of Capt. John Fenwick, of Tudor Lodge, Wimbledon-park, Surrey.

WOODROFFE—LEWIS.—On the 14th inst., at Wrexham Parish Church, Augustus Warren Woodroffe, M.D. Trin. Col. Dub., of Crowle, Lincolnshire, to Florence, eldest daughter of John Lewis, Solicitor, of Beechley, Wrexham.

DEATHS.

AITKEN.—On the 20th inst., at San Niccolo da Tolentino, Rome, Lauchlan Aitken, M.D., aged 43.

BALFOUR.—On the 13th inst., at The Turret, Leven, Fife, John Balfour, L.R.C.S.Ed., Inspector-General of Hospitals, H.M. Indian Service, retired, aged 77.

JOHNSON.—On the 17th inst., at 7, Den-crescent, Teignmouth, South Devon, Mary Catherine, the wife of George Herbert Johnson, M.R.C.S., L.R.C.P.Ed.

LYONS.—On the 19th inst., at his residence, Merrion-square, Dublin, Robert Dyer Lyons, M.D., D.L.

SALMON.—On the 17th inst., at Anglesey-crescent, near Gosport, Sir James Salmon, Kt., M.D., R.N., Inspector-General of Hospitals and Fleets, Honorary Physician to the Queen, aged 75.

SPICER.—On the 9th inst., Mary Elizabeth Lavinia, wife of R. H. S. Spicer, M.D., of North Molton, Devon, aged 61.

WALKER.—On the 16th inst., at Peterborough, Thomas Walker, M.D., J.P., in his 91st year.

N.B.—*A fee of 5s. is charged for the Insertion of Notices of Births, Marriages, and Deaths.*

Notes, Short Comments, & Answers to Correspondents.

It is especially requested that early intelligence of local events having a medical interest, or which it is desirable to bring under the notice of the profession, may be sent direct to this Office.

All communications relating to the editorial business of the journal must be addressed "To the Editor."

Lectures, original articles, and reports should be written on one side only of the paper.

Letters, whether intended for insertion or for private information, must be authenticated by the names and addresses of their writers, not necessarily for publication.

We cannot prescribe or recommend practitioners.

Local papers containing reports or news-paragraphs should be marked.

We cannot undertake to return MSS. not used.

ALCOHOL IN DISEASE.

THE *Rev. Dr. Burns* is thanked for his letter, in which he observes that the fanaticism on this subject is not confined to one side. He also promises us an early report from the medical officers of the Temperance Hospital, which we shall be glad to receive, and to which we promise him that "friendly justice" shall be done.

Verax.—The matter is scarcely one for publication; but otherwise we agree with our correspondent. The removal of the boy in the manner described was inconsiderate and unjustifiable. We think it would have been better to have been satisfied with the expression of regret, and there to have left the assistant to have come to a just estimate of what was due to those in attendance.

L.S.A.—No doubt the treatment for gout must vary according to the habits and life of the individual patient; and a prolonged course of alkalies is not always advisable.

Enquirens might apply to the Director-General, 6, Craig's-court, S.W., for a schedule of the qualifications necessary for candidates for Commissions in the Army Medical Staff.

Mr. R. Rentoul is thanked for his communication. It shall have our attention.

THE LATE DR. ROBERT RIDDELL.

To the Editor of THE LANCET.

SIR,—Dr. Rogers having mentioned my name in THE LANCET as being willing to receive subscriptions for the widow of the late Dr. Riddell of Dunsford, Exeter, I think it only right that your readers should know something of the case they are called upon to subscribe to. About two years ago Dr. Riddell communicated with Dr. Rogers in regard to differences between himself and his guardians, arising, as he considered, from causes foreign to his appointment. Since that time complaints (as he said, without reason) had been continually made against him, when in a fit of desperation, he wrote an intemperate letter to his guardians who forwarded the same to the Local Government Board, which brought an answer requiring his resignation. The shock resulting from the letter was too great for his already enfeebled and worried brain, death by strychnine being the result; but immediately before taking this he wrote a heart-rending letter to Dr. Rogers expressive of his inability to bear up any longer against his troubles, thanking him for former kindness, and asking him to do what he could to assist his widow and children, who are left totally destitute. Dr. Rogers, I grieve to say, is too ill to move in the matter, and if no one else can be found better able to help the poor widow and children I will receive contributions for them, however small the amounts, and will insert them weekly in THE LANCET, with your kind permission.

The following subscriptions have already been received:—Jno. Woodman, M.D., Exeter, £1 1s.; H. Mallett, Esq., Dentist, Exeter, 10s.; Dr. Joseph Rogers, £1 1s.; J. Wickham Barnes, £1 1s.

I am, Sir, yours truly,

3, Bolt-court, Fleet-st., E.C., Dec. 18th, 1886. J. WICKHAM BARNES.

THE CORONERSHIP FOR EAST MIDDLESEX.

Dr. Forbes Winslow writes to explain, in consequence of the numerous letters he has received in reference to his apparently sudden retirement from the candidature for this appointment, that when he first entered the field he was under the impression that there would have been two appointments, but on his discovering that this was not the case, he retired in favour of the late deputy, Mr. Collier, who had held his post for nine years.

Mr. G. Herblats Vos, M.B.—The pamphlet may be had of J. L. Allday, 39, Colmore-row, Birmingham.

Dr. Thomas Oliver.—We would endeavour to insert the reports from time to time.

THE BEAUFORT LIMBS.

To the Editor of THE LANCET.

SIR,—With reference to an article on Beaufort limbs, in THE LANCET of the 4th inst., I can fully endorse all that is stated there; also the remarks made on the subject in General Maxwell's pamphlet. The Provident Surgical Appliance Society, which has been established since the year 1872, is the only Society in England which supplies these limbs, and which makes them a speciality. Our experience of them during a trial of four years is very satisfactory, and out of about 220 supplied during that time, but few have been returned, and these are cases in which self-measurements have been taken by the patients, or where peg legs have previously been used for some considerable time. If, after an amputation, a patient would take directly to one of these limbs, I have no hesitation in stating that his movements and progression would be as fre and untrammelled as if he were supplied with a most costly instrument. Certainly the comfort derived from their extreme lightness and absence of shoulder-straps, their cheapness and general adaptability to almost any length of stump, are greatly in their favour. Below I give three cases out of the many which will show their utility. In conclusion, I may state that our consulting surgeon, Mr. Thomas Bond of the Westminster Hospital, greatly approves of them, and in suitable cases invariably recommends them.

The following are the cases:—William M——, formerly railway servant, has worn two for four years. He gets about well with them, and walks several miles daily. Amputation lower third of thigh, and upper third of the opposite leg. Harriet F. E——, nine years of age, has worn a Beaufort leg over two years. She skips and plays almost as easily and naturally as other children. General ——. Both legs amputated below the knee. The General states that he can ride better with a Beaufort limb than any other, and invariably uses it.

I beg to remain, Sir, your obedient servant,

F. OSBORNE SMITH,

December, 1886. Surgeon to the Surgical Appliance Society.

Dr. Dale (Scarborough).—The paper, if brief, will be acceptable.

Plato.—We do not prescribe.

MEDICAL ATTENDANCE ON THE POOR.

To the Editor of THE LANCET.

SIR,—Entire reform is sadly needed to remedy the existing evils which result from so-called charity—viz., the indiscriminate relief afforded at the out-patient departments of our metropolitan hospitals and dispensaries. It seems ridiculous, nevertheless it is a fact, that hundreds of people seek relief at hospitals annually, who could be better treated at their own homes, particularly medical cases, by local qualified medical men. In the parish in which I reside I have had ample reason to complain of the way in which letters are sent to the clergy for distribution by the so-called "visiting ladies" among the deserving poor—for example, a coachman in service, married, with two young children, earning from 30*s.* to 35*s.* a week, rent free, gas and water supplied, to say nothing of the so-called perquisites from the employers of the master. I maintain that such a case is not a proper one for "gratuitous relief." If persons were to provide for a rainy day, by being members of a well-organised provident dispensary, they would retain their self-respect.—I am, Sir, yours truly,

Dec. 11th, 1886. A PEDESTRIAN.

Mr. McK. Davidson.—Dr. Fayrer's pamphlet on the subject, published by Churchills.

HEMPSTEAD CHURCH.

To the Editor of THE LANCET.

SIR,—The members of the medical profession who kindly contributed the sum of £211 9*s.* 4*d.* towards the restoration of Hempstead Church, where the celebrated Dr. Harvey's remains rest, will be glad to learn that the rebuilding has commenced. The first contract is in the hands of Mr. W. Saint of Cambridge, and comprises the chancel arch, nave, north and south aisles, and the entire reseating; and will, it is hoped, be completed about midsummer next. The sum at present raised (about £1400) is inadequate for the rebuilding of the tower, which will require at the least another £1000; but it is hoped that, during the progress of the present work, additional subscriptions may be received; so that, before the builder's plant is removed, we may see the church and tower in their pristine beauty—a worthy memorial to the great physician's memory, and a house meet for the worship of the still greater Physician.

I am, Sir, yours gratefully,

Hempstead, Dec. 14th, 1886. JOHN ESCREET, Curate in charge.

Dr. J. B. Maurice (Marlborough).—Next week.

Mr. Sewill's letter will appear next week.

THE ARCHÆOLOGY OF ARTIFICIAL LIMBS.

THE history of medicine is all but silent on orthopædic surgery. And yet the Greeks and Romans, who, as archæology has shown, had anticipated much of modern dentistry, cannot have been without artificial substitutes for limbs lost in the vicissitudes of peace or war. Herodotus tells us of a captive who amputated his foot to free himself from the shackle, and thus escaped to his friends, who replaced the limb by a wooden one. The Elder Pliny (Nat. Hist., vii., 23, ed. Mayhoff) records the case of M. Sergius, great-grandfather of Catiline, who lost his right hand in his second campaign, was wounded twenty-three times in two campaigns, and thus had the complete use of neither hand nor foot. Twice made prisoner by Hannibal, he twice escaped, after twenty months spent in chains. He fought four battles with his left hand only, and then made himself a hand of iron, which he fastened on to fight with, and, thus accoutred, raised the siege of Cremona, protected Placentia, and took twelve camps of the enemy in Gaul. Similar substitutes for amputated arms or legs must have been in use even before the time of Sergius; so at least we may infer from the treasure-trove turned up at Capua in 1885, in a tufa-grave. Among the contents of this tomb was an artificial leg, made of bronze, wood, and iron, the skeleton being entire, save the bones represented by the artificial limb. This (probably unique) relic is now in the Museum of the Royal College of Surgeons of London, and is thus officially described: "Roman artificial leg. The artificial limb accurately represents the form of the leg. It is made with pieces of thin bronze, fastened by bronze nails to a wooden core. Two iron bars, having holes at their free ends, are attached to the upper extremity of the bronze. A quadrilateral piece of iron, found near the position of the foot, is thought to have given strength to it. There was no trace of the foot, and the wooden core had nearly all crumbled away. The skeleton had its waist surrounded by a belt of sheet bronze, edged with small rivets, probably used to fasten a leather lining. Three painted vases (red figures on a black ground) lay at the feet of the skeleton. The vases belonged to a rather advanced period of the decline in art (about 300 B.C.)." Commenting on the above, General H. H. Maxwell says: "It is important to add, from other sources, that the upper third of the leg was hollow, while the lower two-thirds were filled with wood."

Mr. C. F. Coombe.—Dr. Semon's instrument, which may be obtained of Weiss and Son, Oxford-street, London.

Ignoramus.—The attention of the Colleges should be called to the advertisement.

THE L.S.A. QUALIFICATION.

To the Editor of THE LANCET.

SIR—In the enumeration of degrees given by "L.S.A. (with no other qualification)," the holders of which, he insinuates, are mainly responsible for a large proportion of the cheap dispensaries, he forgets to make mention of one other title—namely, that of "Surgeon-Accoucheur," with a large-lettered "Surgeon" on the tablet or door-plate, and a comparatively small "Accoucheur," care being also taken to omit the conjunction. I find in this district (E.) about seven-tenths of the establishments mentioned by your correspondent are owned and worked by these so-called "surgeon-accoucheurs." On referring to the Medical Directory I find that this title is assumed only by those practitioners possessing the qualification L.S.A. Lond. or L.A.H. Dublin; and in no instance do I find anyone using it who holds a surgical degree, however moderate, or a medical degree other than those mentioned. Perhaps this may assist your correspondent in solving the problem as to "what proportion, &c. &c." I am, Sir, yours truly,

December, 1886. W. H. J.

GUY'S HOSPITAL.

To the Editor of THE LANCET.

SIR,—A meeting was held on Monday last to appeal to the public for assistance for Guy's Hospital in the shape of £100,000, to enable it to keep open its present number of beds. Its old motto "Dare quam accipere" should at such a time as this force itself upon the attention of all Guy's men who revere their *alma mater*, and are jealous of her good name. I write in the hope that steps will at once be taken to form a committee among ourselves, for the purpose of bringing the matter clearly before the minds of Guy's men everywhere. If each will do his part by contributing himself, and earnestly seeking donations from his friends, we ought to be able to bring to our old school a sufficient sum to tide her over her difficulties, and thus gratefully acknowledge all we owe to her teaching. I remain, Sir, yours obediently,

Dec., 1886. E. D.

THE VACANT ABERDEEN CHAIR.

To the Editor of THE LANCET.

SIR,—The remarks in your last issue relating to the action of certain gentlemen who support Dr. Bridger's candidature call for a short reply.

As the one responsible for the sending out of the circulars to which you refer, I beg to say that, with few exceptions, these were addressed solely to gentlemen whom we had good reason to think knew Dr. Bridger, either personally or by repute. Nothing in the shape of a general and promiscuous appeal to the profession was either contemplated or made.

I am, Sir, your obedient servant,

Inverness-terrace, W., Dec. 21st, 1886. J. WILLIAMS.

ADVERTISING.

Books and Publications (seven lines and under)	£0 5 0
Official and General Announcements	0 5 0
Trade and Miscellaneous Advertisements	0 4 6
Every additional Line	0 0 6
Front Page	0 1 0 per Line
Quarter Page	1 10 0
Half a Page	2 15 0
An entire Page	5 5 0

The Publisher cannot hold himself responsible for the return of testimonials, &c., sent to the office in reply to advertisements; copies only should be forwarded.

NOTICE.—Advertisers are requested to observe that it is contrary to the Postal Regulations to receive at Post-offices letters addressed to initials only.

An original and novel feature of "THE LANCET General Advertiser" is a special Index to Advertisements on page 2, which not only affords a ready means of finding any notice, but is in itself an *additional* advertisement.

Advertisements (to ensure insertion the same week) should be delivered at the Office not later than Wednesday, accompanied by a remittance.

Answers are now received at this Office, by special arrangement, to Advertisements appearing in THE LANCET.

Terms for Serial Insertions may be obtained of the Publisher, to whom all letters relating to Advertisements or Subscriptions should be addressed.

Advertisements are now received at all Messrs. W. H. Smith and Son's Railway Bookstalls throughout the United Kingdom and all other Advertising Agents.

Agent for the Advertising Department in France—J. ASTIER, 66, Rue Caumartin, Paris.

MEDICAL SOCIETIES.

ACADEMY OF MEDICINE IN IRELAND.—Rupture of pelvic cyst; Laryngeal changes subsequent to laryngo-tracheotomy; Granular disease of kidneys, 74.—Sanitary and judicial aspects of cremation; Climate of Dublin, 75—Nature and surgical treatment of scrofulous cervical glands; The quantitative estimation of sugar in the urine by the polariscope, 124 — Lichen planus, 125 — Intra-uterine polypus; The curette in the diagnosis and treatment of intra-uterine disease; Labial hæmatoma, 167 — Pyo-pneumothorax; Displacement of the heart; Acute pericarditis; Horseshoe kidney, 252—Ununited fracture of humerus; Treatment by metal screw-taps; Electrolysis for the treatment of urethral stricture, 446—Liver with two gall-bladders; Perforation of stomach; Colloid carcinoma of stomach; Fibroma of cornea, 1079; Ovariotomy; Nsphro-lithotomy, 1223

BRIGHTON AND SUSSEX MEDICO-CHIRURGICAL SOCIETY.—Myelitis or reflex paraplegia; Congenital dislocation of thighs; Lichen ruber planus, 15

CAMBRIDGE MEDICAL SOCIETY. — Pelvic deformities and their treatment; Serious symptoms resulting from foreign bodies in the ear, 75.—Medical and surgical treatment of fibro-myoma uteri; Movable kidney, 211—Large abdominal tumour; Fractured spine, 447—Injury to skull; Incomplete pericardial sac; Cancrum oris, 870

CLINICAL SOCIETY OF LONDON. — Congenital malformation of heart; Undeveloped sexual organs and congenital defect of tonsils; Pulsating tumour of the head, with Raynaud's disease; Renal lithotomy, 726; Removal of scapula for osteo-sarcoma; Ligature of large arteries, 819—Extirpation of the larynx for epithelioma, 974—Tumours of bladder; Suprapubic cystotomy; Fracture of head of radius complicated by fracture of coronoid, 1075—Diphtheritic paralysis and heart disease; Acute myositis; Gastric ulcer, 1177

EPIDEMIOLOGICAL SOCIETY.—A review of the past year, with some reminiscences of cholera and tropical fevers, 1077

FORFARSHIRE MEDICAL ASSOCIATION. — Hospital sanitary arrangements, 168

GLASGOW OBSTETRICAL AND GYNÆCOLOGICAL SOCIETY.—Fomentation bag; Blighted ovum; Puerperal eclampsia, 1223

HARVEIAN SOCIETY.—Etiology of hydramnios; Alpine winter climates, 921

ISLINGTON MEDICAL SOCIETY.—Opening meeting, 870

LEEDS AND WEST RIDING MEDICO-CHIRURGICAL SOCIETY.—Pasteur's inoculations; Static electricity, 15—Ligature of right carotid and subclavian arteries for aneurysm of the innominate artery; Laparotomy; Chronic anterior polio-myelitis and paralysis, 728

MANCHESTER PATHOLOGICAL SOCIETY.—Rhinoscleroma; Mycosis fungoides; Multiple papilloma of larynx; Cerebral tumour, 977

MEDICAL OFFICERS OF HEALTH SOCIETY.—The president's address, 776—School lighting; Sanitary registration of dwellings, 1132

MEDICAL SOCIETY OF LONDON. — President's address; Hernia of the cæcum, 775—Paralysis agitans; Aneurysm of the aorta; Pouch of penile urethra; Tubercular disease of ankle-joint; Carcinoma of prostate, 820 — The general principles of removal of the uterine appendages, 864—Spontaneous uterine rupture; Hepatico-bronchial fistula, 920—A rare case of epilepsy; Epileptic guinea-pigs, 957—Sarcoma of stomach and pancreas; Cancer of pylorus; Subacute atrophy of liver; Villous tumour of rectum, 1023—Athetosis; Congenital dislocation of patellæ; Pes gigas; Erasion of diseased joints; Dermatitis herpetiformis; Cystitis treated by electricity, 1075—Treatment of lateral curvature of the spine; New method of excision of the knee; Intra-peritoneal hæmorrhage in a newly-born infant; Anæsthetics, 1178—Hypertrophy of thigh and leg; Cervical pachymeningitis; Lupus of larnyx; Syphilis of tongue; Rare syphilis of face; Talipes equinus, 1222

MIDLAND MEDICAL SOCIETY. — Sarcoma of tibia; Unilateral progressive facial atrophy; Cholecystotomy; Malformation of intestine, 977—Borborygmi; Dermoid tumour of ovary; Convergent squint; Myxœdema, 1080

NOTTINGHAM MEDICO-CHIRURGICAL SOCIETY.—Poisoning by syrup of squills; Gravel and calculus, 15

OBSTETRICAL SOCIETY. — Chronic abscess of female urethra; The uterine bruit, 123—Rupture of uterus; Papilloma of Fallopian tube and relation of hydro-peritoneum to tubal disease, 727—Papilloma of Fallopian tube; Obstetrica of the kyphotic pelvis; Lupus, stricture, and atresia of female urethra, 976—Mercurialism in lying-in women undergoing sublimate irrigation, 1131

OPHTHALMOLOGICAL SOCIETY. — Monocular iritis; Interstitial keratitis; Pulsating tumour of orbit, 72—Double chronic glaucoma; Corneal changes in acquired syphilis; Nævus involving the eye; Paralysis of external recti; Mr. Hutchinson's address, 73—Orbital tumour; Optic nerves in head-injury; Ophthalmoplegia dependent on thrombosis of cavernous sinuses; Hypertrophy of lacrymal glands; Penetrating wounds; Complete ophthalmoplegia with ptosis and blindness, 822—The President's address; tumour of optic nerve-sheath; Proptosis with pulsation; acute glaucoma, 1023—Symmetrical swellings about lacrymal glands; Atropy of iris; Lamellar cataract with triradiate structure; Choroidal hæmorrhage; Eyes of school children; Ecchymosis and œdema of eyelids without obvious cause; Hydatid cyst of orbit; Quinine amaurosis, 1179

PATHOLOGICAL SOCIETY.—Complete sections of brain; Hemiatrophia facialis; Malignant cysts of neck; Excavation of lung simulating pneumothorax; Cancer of thyroid; Dermoid cyst of testis; Carcinoma of prostate, 774—Tuberculous mass in supra-renal; Ascending antero-lateral tract; Tumour of palm of hand; Intra-bursal fibroma; Hyoidal cysts; Melanosis of hard palate, 868—Vegetable tumours in relation to bud formation; Œsophageal abscess; Congenital contraction of the stomach; Aneurysm of undefended space, 973—Tumours of palate; Researches concerning Pasteur's prophylactic; Flagellated organisms in the blood; Epithelioma of larynx; Disseminated fibrosis of lungs; Addison's disease associated with cystic condition of pineal body; Included ovum, 1130

PLYMOUTH AND DEVONPORT MEDICAL SOCIETIES.—Ichthyosis of lower lip; Cholera, 125

READING PATHOLOGICAL SOCIETY. —Infant mortality in the borough of Reading, 823

ROYAL MEDICAL AND CHIRURGICAL SOCIETY.—Extra-uterine gestation; Three hundred complete cases of ovariotomy, 818—Disseminated myelitis and measles; Acute tubercular ulceration of larynx, 919—Ricinus communis; Embolic aneurysms, 1022—State of femoral artery after ligature for popliteal aneurysm; Richter's hernia or partial enterocele, 1176

SHEFFIELD MEDICO-CHIRURGICAL SOCIETY.—Ophthalmic cases; Mediastinal tumour; Enlarged spleen; Pasteur's treatment of hydrophobia; Tumour of stomach; Aseptic surgery, 1079

SOCIETY OF MEDICAL MEN QUALIFIED IN SANITARY SCIENCE. — Inaugural meeting; President's address, 211

WEST LONDON MEDICO-CHIRURGICAL SOCIETY.—The president's address, 821

MIRROR OF HOSPITAL PRACTICE, BRITISH AND FOREIGN.

BATLEY AND DISTRICT COTTAGE HOSPITAL.—Excision of os calcis, astragalus, and both malleoli, with resulting useful limb, 71

BIRKENHEAD BOROUGH HOSPITAL.—Poisoning by phosphorus paste; death on the fifteenth day; necropsy, 582

BRISTOL GENERAL HOSPITAL.—Excision of elbow-joint, with suture of olecranon to the sawn end of ulna, 628

CALCUTTA MEDICAL COLLEGE HOSPITAL.—Irreducible prolapse of rectum treated by amputation; recovery, 72

CARDIFF INFIRMARY.—Cystic goitre treated by "shelling out," 14

CHARING-CROSS HOSPITAL.—Transverse fracture of patella, 13—Osseous tumour of tibia, ib.—Scirrhous cancer of rectum, ib.—Stricture of the œsophagus; gastrostomy; recovery, 295

CHESTER GENERAL INFIRMARY.—Hip-joint disease; resection; amputation at the hip-joint; recovery, 628

CHICHESTER INFIRMARY.—Compound comminuted and depressed fracture of frontal and parietal bones; trephining and recovery, 1021

Digitized by Google

EDINBURGH ROYAL INFIRMARY.—Removal of the entire lower jaw by the mouth for acute necrosis.165—Rupture of the bladder; laparotomy, 399

GLASGOW EYE INFIRMARY.—Two cases of conical cornea, 867

GREENOCK INFIRMARY.—Symptoms and treatment of the victims of the disaster at Crarae, 725

GUY'S HOSPITAL.—Cases of strangulated hernia; operation for reduction and excision of the sac, 917—Cases of renal surgery, 1021—Locomotor ataxy, with several unusual symptoms, 1128

HOLBORN UNION INFIRMARY.—Excision of elbow-joint, with troublesome hæmorrhage from the bones, 122

HOSPITAL FOR SICK CHILDREN, GREAT ORMOND-STREET.—Two cases of lithotomy in children; recovery, 773—Two cases of cleft palate, and one of acute periostitis of femur, 1129

HULL ROYAL INFIRMARY.—Scald of the larynx in a child; tracheotomy; recovery, 1175—Intestinal obstruction cured by inversion and injection of air, ib.

LEEDS GENERAL INFIRMARY.—Two cases of rupture of the bladder, 971

LINCOLN COUNTY HOSPITAL.—Three cases of ovarian tumour; ovariotomy; recovery, 1174

LIVERPOOL HOSPITAL FOR WOMEN.—Three cases of pyosalpinx treated by abdominal section, 774

LIVERPOOL NORTHERN HOSPITAL.—Synovial cysts in connexion with the knee; synovial cyst of wrist; operation; recovery, 1074

LONDON HOSPITAL.—Two cases of foreign body removed from the female bladder, 165—Ovariotomy for the second time; recovery, ib.—Two cases of operation by Sédillot's method for removal of epithelioma of tongue; recovery in both, 250—Case of hæmophilia; pedigree through five generations, 533—Primary cancer of vagina, leading to retention of urine, 627

MATER MISERICORDIÆ HOSPITAL, DUBLIN.—Spontaneous cure of ovarian tumour, 672

MELBOURNE HOSPITAL, AUSTRALIA.—Simultaneous amputation of right thigh and disarticulation of left knee for railway injury; recovery, 210

MIDDLESEX HOSPITAL.—Case of biliary colic with jaundice; exploratory operation; death; necropsy, 1072

NEWCASTLE INFIRMARY.—Rupture of bladder; fracture of astragalus and other bones; polyuria; recovery, 919

NEWCASTLE-ON-TYNE INFIRMARY.—Sarcoma of the internal popliteal nerve, 344—Subperiosteal sarcoma of tibia, 887

NORTHAMPTON GENERAL INFIRMARY.—Compound depressed fracture of skull inflicted by a pistol; wound of face; trephining; recovery, 122

POPULAR AND STEPNEY SICK ASYLUM.—An unusual cause of emphysema; necropsy, 1221

PRESBYTERIAN EYE AND EAR CHARITY HOSPITAL, BALTIMORE, U.S.A.—A case of cataract, 206

QUEEN CHARLOTTE'S LYING-IN HOSPITAL.—Hernia into the umbilical cord, 773

ROYAL HOSPITAL, PORTSMOUTH.—Lacerated wound of the knee, followed by tetanus twenty-two days after the accident; treatment by chloral hydrate; recovery, 1221—Multiple melanotic sarcomata; death; necropsy, ib.—Crush of legs by tram-car; double amputation below the knees; recovery, 1222

ST. BARTHOLOMEW'S HOSPITAL.—Treatment of aneurysm by the introduction of steel wire or other material into the sac, 120—Stricture of rectum; complete intestinal obstruction for two months; proctotomy; recovery, 414—Disease of the knee-joint, secondary to synovial cyst; amputation, 970

ST. GEORGE'S HOSPITAL.—Suicidal penetrating wound of the neck; recovery, 816

ST. GEORGE'S HOSPITAL FOR DISEASES OF THE SKIN, LIVERPOOL.—Ulcerating post-natal nævus, 867

ST. JOSEPH'S HOSPITAL, VICTORIA, BRITISH COLUMBIA.—Aneurysm of the innominate artery; simultaneous ligature of common carotid and subclavian arteries; hemiplegia; death, 673

ST. MARY'S HOSPITAL, MANCHESTER.—Albuminuria during pregnancy; induction of premature labour; recovery, 534

ST. THOMAS'S HOSPITAL.—Two cases of fracture of the base of the skull, with recovery, 209—Cyst of the broad ligament and one of hydro-salpinx; abdominal section and recovery in both, 308—Supra-pubic lithotomy in a boy; recovery, 582—Compound depressed fracture of the occipital bone; trephining; recovery, 723—Punctured wound of brain; removal of bone; hernia cerebri; death from diphtheria; necropsy, 1020—Poisoning by cyanide of potassium; recovery, 1174

ST. VINCENT'S HOSPITAL, DUBLIN.—Acute rheumatism quickly cured by salicine, 167—Acute chorea; death, 445

SALFORD ROYAL HOSPITAL.—Unusually large calculus removed from a girl per urethram, 251

SAMARITAN HOSPITAL FOR WOMEN, NOTTINGHAM.—Two cases of ovarian tumour, and one of hydramnios, 445

STROUD GENERAL HOSPITAL.—Two cases of external urethrotomy, 672

SUSSEX COUNTY HOSPITAL.—Recovery after swallowing a fluid ounce and a half of commercial hydrochloric acid, 14

TORBAY HOSPITAL, TORQUAY.—Two cases of lupus treated successfully with iodoform, 817

TOTTENHAM HOSPITAL.—Stone in the bladder; supra-pubic lithotomy; recovery, 817—Compound depressed fracture of skull; trephining; recovery, 866

UNIVERSITY COLLEGE HOSPITAL.—Secondary epithelioma surrounding left half of body of lower jaw; removal of the growth, together with half of jaw; recovery, 70—Impaction of a foreign body in the œsophagus; laryngotomy; tracheotomy; recovery, 343—Sarcoma of rectum; Littré's colotomy; relief, 865

WEST LONDON HOSPITAL.—Enteric fever, fatal on about the seventieth day from perforation; necropsy, 251—Abscesses of neck and behind pharynx, almost causing death from suffocation, 671

WOLVERHAMPTON AND STAFFORDSHIRE GENERAL HOSPITAL.—Tubercular ulcer of tongue in a woman; removal of front portion, followed by complete cessation of local pain, 444—Two cases of acute glossitis, 724

Urinary bladder, rupture of the, 1226; with two cases of intra-peritoneal rupture successfully treated by abdominal section, 1118
—— difficulties occurring in boys, 339
Urine, toxicity of, in Bright's disease, 29; on the quantitative estimation of sugar in the, by the polariscope, 124; tubercle bacilli in, 183; fetid, 906, 957; salicylate of soda for, 853
Uterine appendages, cases of chronic inflammatory disease of the, 67, 406; the general principles of removal of the, 869
—— bruit, the, 123
—— fibro-myoma, treatment of, 811, 859
Uterus, rupture of the, 727; spontaneous, 920; shortening of the round ligaments of the 1143

V.

Vaccination, alleged deaths from, 222, 263; in East Africa, 542; alleged insusceptibility to, in Spain, 368; census of, 740; official returns of, 880; judicial statistics in, 1189; and erysipelas, 956; animal, 352
Vagina, distended hymen occluding the, 152; case of primary cancer of the, leading to retention of urine, necropsy, 627; diphtheria of the, without the throat being affected, 864
Vaginal hydrocele, curative treatment of, by corrosive sublimate, 1072
Van Helmont, 989
Vapour cones, 979
Varicose veins, treatment of, by injection of carbolic acid, 769
Vaso-motor nerves on lymphatics, action of, 262
Vatican and cremation, the, 328
Vegetable or mixed diet, 1091
Vegetables, poisonous, 223
Venous thrombosis, recurring, following chronic pyelitis of gonorrhœal origin, 723
Ventnor, the climate of, 610
Verdon and Bott, Messrs., on direct representation in the Medical Council, 945; on the Association of General Practitioners, 1000, 1049
Vertebra, acute necrosis of the fourth cervical, 869
Vertigo, laryngeal, 783
Vesicula seminalis, carcinoma of, 973
Viburnum prunifolium in threatened abortion, 888
Vicarious bleeding from the under lip, 813
Victoria, the health of, 597; Hospital, Burnley, Lancashire, 840; University, 1067
Vienna, proposed hygienic institution in, 93; midwifery statistics in, 643; new anatomical institute in, 783
Viewing remains, 182, 635
Virchow, Professor, at the Brown Institution, 884
Visceral tabes, 836
Vision, defects of, in candidates for the public services, 409
Volta prize, the, 312
Volunteer medical service, 26, 102, 107, 193, 234, 1055
Vomiting, exhaustion from, 739
Vorlesungen über die Diagnostik der Gehörnkrankheiten (review), 1225
Vossius, Dr. A., Leitfaden zum Gebrauch des Augenspiegels für Studente und Aerzte (review), 1226
Vulva and vagina, tubercular ulceration of the, 694

W.

Wadham, Dr., introductory address at St. George's Hospital, 676
Wagstaffe, Mr. T. H., on an unexpected cause of numbness of the extremities, 155
Wakefield, Dr. W., the Baths, Bathing, and Attractions of Aix-les-Bains, Savoy (review), 76
Wakley, Dr. James Goodchild, in memoriam, 451; death of, 463; funeral of, 522; the late, 552
Wales, the Prince of, 218
Walker, Dr. T. H., presentation to, 754
——, Mr. G. E., on the treatment of glaucoma, 1024
Wallasey district, health of, 700
Wandsworth district, health of, 420
Wanklyn, Mr. J. A., on the existence of iodine in the free state in a mineral water, 1201

Digitized by Google

Ward, Dr., on the recent cholera scare at Queensland ports, 98
——, Mr. E., on abdominal section for displaced hernia, 201
Warneford Hospital, 709
Warrington district, health of, 421
Wasp, death following the sting of a, 427
Water, morbid germs in, 179; pathogenic micro-organisms in, 226; and air, the bacteriology of, 541
Water analysis, uniformity in reports of, 460
—— mains, eels in, 742
—— softening, 234
Waters, Dr., and the chemists of Chester, 1094
Waterworth, Mr. H., death of, 791
Watson, Dr. Eben., obituary notice of, 1253
Webb, Mr., presentation to, 1007
Weir, Dr. A. M., on infantile diarrhœa, 950
Welch, Mr. C. H., on the treatment of ozæna, 905
Well, suffocation in a, 689
Wells, Sir T. S., inaugural address delivered before the Sanitary Congress, 571; at the Sanitary Congress, 587; Hospital for Women, Liverpool, 748
West Africa, vaccination in, 610
—— Ham, the proposed hospital at, 754
—— Kent Medico-Chirurgical Society, 754
—— London Hospital, 742
—— London Medico-Chirurgical Society, 709; President's address at, 821
West, Mr. J. G. U., case of poisoning by chloroform, 13
Westminster, subsoil filth in, 639
Weymouth sanatorium, 427
Wheelhouse, Mr. C. G., direct representation on the Medical Council, 946
Whipham, Mr. T., on clergyman's sore-throat, 440
Whitaker's Almanack (review), 1226
White, Dr. H. W., on neurorheuma, or nervous energy, 164
Whitehead, Mr. W., on excision of the coccyx, 112
Whitson, Dr. J., on treatment and dressing of wounds, 438
Who is responsible? 28
Whooping-cough, 1189
Wigglesworth, Dr. J., a case of sensory aphasia, 116
Wilcox, Mr. H., a case of albuminuria, 1068
Wilkinson, Mr. G. T., on overcrowding of the profession, 153
Wilks, Dr. S., on Oliver Wendell Holmes, 6
Williams, Dr. A. W., obituary notice of, 1004
——, Dr. D. W., on Guinea-worm, 711, 756
——, Dr. H. W., on direct representation in the General Medical Council, 892, 996
——, Mr. J., the vacant Aberdeen chair, 1257
——, Mr. J. T., on a case of labour followed by suppression of urine, 248
Williamson, Dr. W. C., Handbook for the Instruction of Attendants on the Insane (review), 401
Willoughby, Dr., on school lighting, 1132
Wiltshire, Dr. A., death of, 1144
Wilson, Dr. A., on rapid pleural effusion treated by antiseptic incision, 670; on the first professional examination in Scotland, 705
Wimbledon, damp tents at, 182
Wincanton, diphtheria in, 650
Window-cleaning from the outside, 939
Windsor, the homes of the poor of, 228, 327; THE LANCET Sanitary Commission on the small-pox at, 324, 374; the improvement scheme, 362, 550, 743
Wise, Dr. A., Contra-indications for Visiting the High Altitudes, with a Description of the Environs of Maloja, Upper Engadine (review), 450
Wolfe, Dr. J. R., introductory lecture delivered at Anderson's College, Glasgow, 856
Wolverhampton and Staffordshire General Hospital, 608
Woman culture, the "can" and the "shall" of, 688
Wombwell, scarlet fever at, 995
Wood, Mr. A. H., Association of Licentiates of Scottish Corporations, 382
Woodman, Dr. Samuel, death of, 598, 655
Workhouse cruelties, 1185
—— infirmaries and clinical study, 1160
Workhouses and infirmaries, proposed uniform dietary scales for, 37
Working men, seaside convalescent home for, 608
Worth, Mr. E. J., a remarkable concomitant of hydrocele tapping, 148
Wounds, treatment and dressing of, 438
Wright's (Dr.) hygienic down bed quilt, 402
Wrist, synovial cyst of the, 1074

Y.

Year-book of the Scientific and Learned Societies of Great Britain and Ireland (review), 17
Yellow fever inoculated by one of the protected, 878
York, the Sanitary Congress at, 312, 598; typhoid epidemic in, 1187

Z.

Zehender, Dr. W., on parasitical diseases of the eye, 1059

END OF THE SECOND VOLUME FOR 1886.

Printed by Ballantyne, Hanson, and Co., No. 4, Chandos-street, Covent-garden.

SMITH, ELDER, & CO.'S PUBLICATIONS.

ANATOMY.

ELLIS and FORD.—Illustrations of Dissections. In a Series of Original Plates, the size of Life, representing the Dissection of the Human Body. By G. V. ELLIS and G. H. FORD. Imperial folio, 2 vols., half bound in morocco, £6 6s. May also be had in parts separately. Parts 1 to 28, 3s. 6d. each; Part 29, 5s.

SMITH.—The Descriptive Atlas of Anatomy. A Representation of the Anatomy of the Human Body. In 92 royal 4to Plates, containing 550 Illustrations. Introducing Heitzmann's Figures, considerably modified, and with many Original Drawings from Nature. By NOBLE SMITH, F.R.C.S. Edin., L.R.C.P. Lond., Surgeon to the All Saints' Children's Hospital, and Orthopædic Surgeon to the British Home for Incurables. Bound in half-leather, 25s.

"Certainly one of the most remarkable publications of the day. The great advantage which it presents is that all the attachments of bones, the arteries, veins, &c., are copiously lettered and described *in situ*; and the arteries and veins are coloured. The book is one of great utility and merit, and reflects credit on the artist and also on those who have produced it."—BRITISH MEDICAL JOURNAL.

REEVES.—Human Morphology: a Treatise on PRACTICAL and APPLIED ANATOMY. By HENRY ALBERT REEVES, F.R.C.S.E., formerly Demonstrator of Anatomy at the London and at the Middlesex Hospital Medical Colleges, and Lecturer on Anatomy at the London School of Medicine for Women; Surgeon, and formerly Pathologist, to the Hospital for Women; Surgeon to the Royal Orthopædic Hospital; Surgeon to the East London Children's Hospital; Assistant-Surgeon and Teacher of Practical Surgery at the London Hospital; Consulting Surgeon at the Westminster General Dispensary; formerly Assistant-Surgeon to the Central London Ophthalmic Hospital; and Surgeon in co-charge of the Aural Department and Surgical Registrar at the London Hospital, &c. With 564 Illustrations, 8vo, 25s.

CLELAND.—A Directory for the Dissection of the HUMAN BODY. By JOHN CLELAND, M.D., F.R.S., Professor of Anatomy in the University of Glasgow. Second Edition, fcap. 8vo, 3s. 6d.

NEWTH.—A Manual of Necroscopy; or, a GUIDE to POST-MORTEM EXAMINATIONS. With Notes on the Morbid Appearances and Suggestions for Medico-Legal Examinations. By A. H. NEWTH, M.D. Crown 8vo. 5s.

HISTOLOGY AND PHYSIOLOGY.

CORNIL and RANVIER.—Manual of PATHOLOGICAL HISTOLOGY. By CORNIL and RANVIER. Second Edition, Re-edited and Enlarged. Translated, with the approval of the Authors, by A. M. HART. Vol. I.—Histology of the Tissues. Demy 8vo, 21s. Vol. II., Part I.—Special Pathological Histology. Lesions of the Organs, Part I. With 125 Illustrations, [illegible]my 8vo, 12s. Vol. II., Part II. (Lesions of the Organs concluded). [illegible]th numerous Illustrations. Demy 8vo, 16s.

[illegible] final part includes an unrivalled monograph on the pathology [illegible]in, and the whole work stands in the first rank of European [illegible]erature. ..... To students and practitioners it conveys an [illegible]formation hardly to be got elsewhere."—BRITISH MEDICAL

[illegible]ER.—A Course of Practical [illegible]tion. By EDWARD ALBERT SCHÄFER, Assistant Pro[illegible]ysiology, University College. With numerous Illustra[illegible]n, 8vo, 10s. 6d.

[illegible] much pleased with Mr. Schäfer's book. It is clearly [illegible] originally illustrated, and possesses the merit of being [illegible]complete."—THE LANCET.

[illegible]—A Text-book of Practical With 30 Outline Plates, 1 Coloured Plate, and 27 [illegible] By WILLIAM STIRLING, M.D., Sc.D., F.R.S.E., [illegible] f the Institutes of Medicine in the University of [illegible]to, 14s.

[illegible]SMITH.—Atlas of Histology. [illegible] F.R.S., Lecturer on Histology at St. Bartholo[illegible] School; and NOBLE SMITH, F.R.C.S. Edin., [illegible]rgeon to the All Saints' Children's Hospital, [illegible]n to the British Home for Incurables. A [illegible] of the Microscopic Structure of Simple and [illegible]n and the Higher Animals, in carefully [illegible]rings, with Explanatory Text of the Figures, [illegible]e hitherto ascertained facts in Histology. [illegible] Plates, bound in half-leather, price £4 4s.

[illegible]vements of Human [illegible]RMANN, Professor of Physiology in [illegible]d Edition, entirely recast from the [illegible]ry copious Additions and many [illegible]HUR GAMGEE, M.D., F.R.S., [illegible]y in Owens College, Manchester, [illegible]the University of Edinburgh.

SURGERY.

HOLMES.—Surgery: its Principles and PRACTICE. By TIMOTHY HOLMES, M.A. Cantab., F.R.C.S., Surgeon to St. George's Hospital. Fourth Edition, with upwards of 400 Illustrations, royal 8vo, 30s.

"We believe it to be by far the best surgical text-book that we have, insomuch as it is the completest, and the one most thoroughly brought up to the knowledge of the present day. All who will give this book the careful perusal that it deserves and requires, whether student or practitioner, will agree with us that, from the happy way in which justice is done, both to the principles and practice of surgery, from the care with which its pages are brought up to modern date, from the respect which it paid all along to the opinions of others, it deserves to take the first place among the text-books of surgery."—BRITISH MEDICAL JOURNAL.

KEETLEY.—An Index of Surgery. Being a Concise Classification of the Main Facts and Theories of Surgery, for the Use of Senior Students and others. By C. B. KEETLEY, F.R.C.S., Senior Surgeon to the West London Hospital, and Surgeon to the Surgical Aid Society. Third Edition, crown 8vo, 10s. 6d.

CHEYNE.—Antiseptic Surgery; its Principles, Practice, History, and Results. By W. WATSON CHEYNE, M.B., F.R.C.S., Assistant-Surgeon to King's College Hospital, and Demonstrator of Surgical Pathology in King's College. With 145 Illustrations, 8vo. 21s.

"Mr. Cheyne has done his work exceedingly well. No man, except Mr. Lister, is better qualified to write on this subject; and he has done so with a fulness, clearness, and calmness that leaves little to be desired."—BRITISH MEDICAL JOURNAL.

CHEYNE.—Manual of the Antiseptic TREATMENT of WOUNDS. For Students and Practitioners. By W. WATSON CHEYNE, M.B., F.R.C.S., Assistant-Surgeon to King's College Hospital; Surgeon to the Paddington-green Children's Hospital, &c. With Woodcut Illustrations, crown 8vo, 4s. 6d.

"This book supplies a known want. Having gone carefully through the book, we can confidently recommend it to all who seek to become acquainted with Sir Joseph Lister's method."—THE LANCET.

MAC CORMAC.—Antiseptic Surgery: an Address delivered at St. Thomas's Hospital, with the subsequent Debate. To which are added a short Statement of the Theory of the Antiseptic Method, a Description of the Materials employed in carrying it out, and some Applications of the Method to Operations and Injuries in Different Regions of the Body, and to Wounds received in War. By Sir WILLIAM MAC CORMAC, M.A., F.R.C.S.E. & I., M.Ch. (Hon. Caus.), Surgeon and Lecturer on Surgery at St. Thomas's Hospital. With Illustrations, 8vo, 15s.

MAC CORMAC.—Surgical Operations.— Part I.: The LIGATURE of ARTERIES. A Short Description of the Surgical Anatomy and Modes of Tying the Principal Vessels. By Sir WILLIAM MAC CORMAC, F.R.C.S., Surgeon and Lecturer on Surgery, St. Thomas's Hospital. With 93 Illustrations, 8vo, 3s. 6d.

SAYRE.—Spinal Disease and Spinal CURVATURE; their Treatment by Suspension, and the Use of Plaster-of-Paris Bandage. By LEWIS A. SAYRE, M.D., of New York, Professor of Orthopædic Surgery in Bellevue Hospital Medical College, New York, &c. With 21 Photographs and numerous Woodcuts, crown 8vo, 10s. 6d.

HAMILTON.—A Practical Treatise on FRACTURES and DISLOCATIONS. By FRANK HASTINGS HAMILTON, A.B., A.M., M.D., LL.D. Seventh Edition, Revised and Improved. With 379 Illustrations, 8vo, 28s.

SMITH.—The Surgery of Deformities. A Manual for Students and Practitioners. By NOBLE SMITH, F.R.C.S. Edin., L.R.C.P. Lond., Surgeon to All Saints' Children's Hospital, and Orthopædic Surgeon to the British Home for Incurables. With 118 Illustrations. Crown 8vo, 10s. 6d.

"The woodcuts show very practically the points which they are intended to illustrate, and materially help the reader. We can recommend this as one of the most practical, useful, and able handbooks of orthopædic surgery. It is one which will be alike popular and useful with practitioners and students, and establishes for its author a high position in the department of science and practice which his handbook illustrates."—BRITISH MEDICAL JOURNAL.

COLEMAN.—A Manual of Dental Surgery and PATHOLOGY. By ALFRED COLEMAN, L.R.C.P., F.R.C.S. Exam., L.D.S., &c.; Senior Dental Surgeon and Lecturer on Dental Surgery to St. Bartholomew's and the Dental Hospital of London; Member of Board of Examiners in Dental Surgery, Royal College of Surgeons; late President of the Odontological Society of Great Britain. With 388 Illustrations, crown 8vo, 12s. 6d.

"It is always satisfactory to come across a manual written by an author thoroughly acquainted with his subject, and with a just sense of proportion, not disposed to magnify unimportant details because they happen to include subjects on which he has especially worked, nor minimise in importance others to which he has given less attention. The manual is well balanced, clear, simple, and exact, and is an excellent student's book."—LONDON MEDICAL RECORD.

SMITH, ELDER, & CO.'S NEW BOOKS.

NEW WORK BY PROFESSOR MILNES MARSHALL.
In the Press, with numerous Illustrations.

PRACTICAL ZOOLOGY: A Laboratory Handbook for Junior STUDENTS.

By A. MILNES MARSHALL, M.D., D.Sc., M.A., F.R.S.,
Beyer Professor of Zoology in Owens College; Late Fellow of St. John's College, Cambridge.
Assisted by C. HERBERT HURST, Demonstrator and Assistant-Lecturer in Zoology, Owens College, Manchester.

NEW WORK BY DR. JOSEPH F. PAYNE.
In the Press.

A MANUAL OF GENERAL PATHOLOGY.

By JOSEPH F. PAYNE, M.D., F.R.C.P.,
Fellow of the Royal Medical and Chirurgical Society, Member of the Pathological Society; Senior Assistant-Physician and Lecturer on Pathological Anatomy, St. Thomas's Hospital; Assistant-Physician, Hospital for Diseases of the Skin, &c.

NEW WORK BY JAMES CANTLIE, M.B., F.R.C.S.
In the Press, with Illustrations.

OPERATIVE SURGERY.

By JAMES CANTLIE, M.B., F.R.C.S.,
Assistant-Surgeon, Charing-cross Hospital; Demonstrator of Anatomy, Charing-cross Hospital Medical School; Surgeon Registrar, and Demonstrator of Practical Physiology.

NEW EDITION OF FERRIER'S "FUNCTIONS OF THE BRAIN."
Early in October, Second Edition, Rewritten, with many New Illustrations, 8vo.

THE FUNCTIONS OF THE BRAIN. By David Ferrier, M.D.,

LL.D., F.R.S., Professor of Forensic Medicine, King's College; Physician to King's College Hospital; Physician to the National Hospital for the Paralysed and Epileptic.

*** This, though termed a Second Edition, is essentially a new book, having been almost entirely rewritten, and embracing the results of new investigations by the author, as well as a critical survey of the more important physiological and pathological researches on the functions of the brain that have been published within the last ten years. The number of illustrations has been doubled, and the chapters devoted to the structure of the nerve centres and the functions of the spinal cord have been much enlarged, so that the work forms a complete treatise on the central nervous system.

NEW EDITION OF FINLAYSON'S "CLINICAL MANUAL."
In a few days, Second Edition, Revised and Enlarged, with many new Illustrations, crown 8vo, 12s. 6d.

CLINICAL MANUAL FOR THE STUDY OF MEDICAL CASES.

Edited by JAMES FINLAYSON, M.D., Physician and Lecturer on Clinical Medicine in the Glasgow Western Infirmary. With Special Chapters by Prof. GAIRDNER on the Physiognomy of Disease; Prof. STEPHENSON on Disorders of the Female Organs; Dr. ALEXANDER ROBERTSON on Insanity; Dr. SAMSON GEMMELL on Physical Diagnosis; Dr. JOSEPH COATS on Laryngoscopy, and also on the Method of Performing Post-mortem Examinations.

*** Every portion has been revised by the original Contributors and by the Editor himself. Such additions and alterations have been made as seemed desirable. Large sections, here and there, have been entirely rewritten, and the number of Illustrations increased from 85 to 160.

NEW EDITION OF ELLIS'S "DEMONSTRATIONS OF ANATOMY."
In the Press, Tenth Edition, with numerous Illustrations, small 8vo.

DEMONSTRATIONS OF ANATOMY: Being a Guide to the

Knowledge of the Human Body by Dissection. Edited and Revised by G. D. THANE, F.R.C.S., Professor of Anatomy, University College.

NEW EDITION OF PLAYFAIR'S "MIDWIFERY."
In a few days, Sixth Edition, 2 vols., demy 8vo, with 166 Illustrations, 28s.

A TREATISE ON THE SCIENCE AND PRACTICE OF MIDWIFERY.

By W. S. PLAYFAIR, M.D., F.R.C.P., Physician-Accoucheur to H.I. and R.H. the Duchess of Edinburgh; Professor of Obstetric Medicine in King's College; Physician for the Diseases of Women and Children to King's College Hospital; Consulting Physician to the General Lying-in Hospital and to the Evelina Hospital for Children; late President of the Obstetrical Society of London; Examiner in Midwifery to the University of London, and to the Royal College of Physicians.

In Two Vols., comprising 1864 pages, royal 8vo, price 32s., bound in cloth; or in half morocco, marbled edges, 42s.

A DICTIONARY OF PRACTICAL SURGERY.

BY VARIOUS BRITISH HOSPITAL SURGEONS.

Edited by CHRISTOPHER HEATH, F.R.C.S.,
Holme Professor of Clinical Surgery in University College, London; Surgeon to University College Hospital; Member of the Council and Court of Examiners of the Royal College of Surgeons of England.

***** Prospectuses giving the contributions of each writer, and full particulars of the scope and object of the Dictionary, will be sent, post free, on application.**

"Altogether the work is a credit to the energy of authors, editor, and publisher, and will rank highly wherever British surgery is consulted, and wherever the English language is understood. All its contributors are to be congratulated upon its appearance. ..... It is too often the case, in the modern *cacoethes scribendi*, that the book makes the author's reputation, and not that the author ensures the reputation of the book. In the present instance, however, the editor has so judiciously chosen his contributors that they will guarantee the thoroughness and reliability of the book as a standard work of reference."—BRITISH MEDICAL JOURNAL.

London: SMITH, ELDER, & CO., 15, Waterloo-place.

STANDARD MEDICAL AND SURGICAL BOOKS.

Eleventh Thousand, with 138 Illustrations Engraved on Wood, One Volume, medium 8vo, price 31s. 6d. cloth, or 40s. half-bound in russia; to be had also in Two Volumes, price 34s. cloth.

QUAIN'S DICTIONARY OF MEDICINE,

Including General Pathology, General Therapeutics, Hygiene, and the Diseases peculiar to Women and Children. By Various Writers. Edited by RICHARD QUAIN, M.D., F.R.S., &c., Fellow and late Senior Censor of the Royal College of Physicians; Member of the Senate of the University of London; Member of the General Council of Medical Education and Registration; Consulting Physician to the Hospital for Consumption and Diseases of the Chest at Brompton.

"A work of this ambitious scope, should it afford no sufficient ground for criticism, is assuredly altogether beyond the capacity of adequate review. We take leave of it by saying that, as a work, it is well conceived and well executed; that it is a really good epitome within very moderate limits, and that it cannot fail to be of use to the busy practitioner. . . . . Dr. Quain is to be congratulated upon the completion of his labours. He may rest from them in the full assurance that the result will prove a boon to the medical profession."—BRITISH MEDICAL JOURNAL.

"No dictionary of medicine so compendious, and at the same time so authoritative, has yet appeared in any language. One hundred and sixty writers contribute an immense number of articles, varying in length from a column or less to thirty pages."—QUARTERLY REVIEW.

"Dr. Quain, in the great Dictionary just published, has availed himself of his professional status to obtain the co-operation of numerous writers, all of acknowledged position, in the preparation of a work which aims at presenting a complete picture of the medical science and practice of the day."—THE TIMES.

Ninth Edition, with 1195 Engravings on Wood, of which 97 are coloured, Two Volumes, 8vo *(which are sold separately)*, price 18s. each.

QUAIN'S ELEMENTS OF ANATOMY.

The Ninth Edition, Re-edited by ALLEN THOMSON, M.D., D.C.L., LL.D., F.R.S., formerly Professor of Anatomy in the University of Glasgow; EDWARD ALBERT SCHÄFER, F.R.S., Professor of Physiology in University College, London; and GEORGE DANCER THANE, Professor of Anatomy in University College, London.

In this edition the whole work has been subjected to a thorough revision, and such additions and improvements have been introduced as seemed necessary, without materially altering its form. In the first volume the figures of the Bloodvessels have been coloured, and a chapter has been added on Superficial and Topographical Anatomy. In the second volume very considerable changes have been made in the departments of Histology, the Central Nervous System, and Embryology. A considerable number of new figures have been introduced into the present edition, some having been substituted for former ones now withdrawn, others added as new illustrations.

Tenth Edition, royal 8vo, price 30s.

GRAY'S ANATOMY, DESCRIPTIVE AND SURGICAL.

With 567 Woodcut Illustrations; those in the First Edition after Original Drawings by Dr. Carter, Dr. Westmacott, and other Demonstrators of Anatomy. The Tenth Edition, Re-edited by T. PICKERING PICK, Surgeon to St. George's Hospital, Examiner in Anatomy, Royal College of Surgeons of England.

Eighth Edition, Revised, with 984 Illustrations on Wood, Two Volumes, 8vo; price 42s. cloth, or 60s. half-bound in russia.

ERICHSEN'S SCIENCE AND ART OF SURGERY.

A Treatise on Surgical Injuries, Diseases and Operations. By JOHN ERIC ERICHSEN, F.R.S., LL.D., F.R.C.S.; Surgeon Extraordinary to H.M. the Queen; ex-President of the Royal College of Surgeons. The Eighth Edition, Edited by Professor MARCUS BECK, M.S. and M.B. Lond., and F.R.C.S., Surgeon to University College Hospital, &c.

Third Edition, with 4 Plates in Lithography, 5 in Chromo-lithography, and 591 Wood Engravings in the Text; Three Volumes, royal 8vo, price 3ls.

HOLMES'S SYSTEM OF SURGERY, THEORETICAL AND PRACTICAL.

In Treatises by Various Writers. Edited by T. HOLMES, M.A. Cantab., Surgeon to St. George's Hospital, Membre Correspondant de la Société de Chirurgie de Paris; and J. W. HULKE, F.R.S., Surgeon to the Middlesex Hospital and to the Royal London Ophthalmic Hospital.

Third Edition, Revised by T. LAUDER BRUNTON, M.D., 8vo, price 24s.

MURCHISON'S CLINICAL LECTURES on DISEASES of the LIVER, JAUNDICE, and

ABDOMINAL DROPSY; including the Croonian Lectures on Functional Derangements of the Liver, delivered at the Royal College of Physicians in 1874. By CHARLES MURCHISON, M.D., LL.D., F.R.S., &c.; late Physician and Lecturer on the Principles and Practice of Medicine, St. Thomas's Hospital.

Seventh Edition, Revised and Enlarged, 8vo, 18s.

WEST'S LECTURES on the DISEASES of INFANCY and CHILDHOOD.

By CHARLES WEST, M.D., &c., Founder of, and formerly Physician to, the Hospital for Sick Children.

Complete in Three Parts, 8vo, with 15 Plates and 122 Woodcuts, price 34s. 6d. cloth.

DICKINSON on RENAL and URINARY AFFECTIONS.

By W. HOWSHIP DICKINSON, M.D.Cantab., F.R.C.P., Physician to, and Lecturer on Medicine at, St. George's Hospital; Consulting Physician to the Hospital for Sick Children; Corresponding Member of the Academy of Medicine of New York.

*** The Parts can also be had separately, each complete in itself, as follows:—Part I. Diabetes, price 10s. 6d. sewed, 12s. cloth. Part II. Albuminuria, price 20s. sewed, 21s. cloth. Part III. Miscellaneous Affections of the Kidneys and Urine, price 30s. sewed, 31s. 6d. cloth.

With 339 Illustrations Engraved on Wood, 8vo, price 31s. 6d.

COATS'S MANUAL of PATHOLOGY.

By JOSEPH COATS, M.D., Pathologist to the Western Infirmary and to the Sick Children's Hospital, Glasgow; Lecturer on Pathology in the Western Infirmary; Examiner in Pathology in the University of Glasgow; formerly Pathologist to the Royal Infirmary, and President of the Pathological and Clinical Society of Glasgow.

Eleventh Edition, Revised and Adapted to the New Pharmacopœia by NESTOR TIRARD, M.D., crown 8vo, 12s. 6d.

GARROD'S ESSENTIALS of MATERIA MEDICA and THERAPEUTICS.

By ALFRED BARING GARROD, M.D., F.R.S., Fellow of the Royal College of Physicians; Consulting Physician to King's College Hospital; late Professor of Therapeutics at King's College, London. The Eleventh Edition, Revised and Edited, under the supervision of the Author, by NESTOR TIRARD, M.D., F.R.C.P., Professor of Materia Medica and Therapeutics in King's College, London, &c.

SMITH, ELDER, & CO.'S PUBLICATIONS.

MEDICINE.

BRISTOWE.—A Treatise on the Theory and PRACTICE of MEDICINE. By JOHN SYER BRISTOWE, M.D.Lond., F.R.S., Fellow and formerly Censor of the Royal College of Physicians, Senior Physician to, and Joint Lecturer on Medicine at, St. Thomas's Hospital, President of the Society of Medical Officers of Health, Examiner in Medicine to the Royal College of Surgeons, formerly Examiner in Medicine to the University of London, and Lecturer on General Pathology and on Physiology at St. Thomas's Hospital. Fifth Edition, 8vo, 21s.

"The busy practitioner will be able by its perusal to keep abreast with the great progress which scientific medicine has made within the past few years, and for which he has neither the time nor frequently the opportunity to consult larger treatises, monographs, and journals. The style of the work is plain and lucid; though condensed, it is never bald. As an accurate and praiseworthy guide, it is of the highest order of merit."—BOSTON MEDICAL AND SURGICAL JOURNAL.

Hartshorne.—Essentials of the Principles and PRACTICE of MEDICINE. A Handbook for Students and Practitioners. By HENRY HARTSHORNE, A.M., M.D. Fifth Edition, thoroughly revised, 12s. 6d.

"We can say that all students will find it an invaluable guide in their pursuit of clinical medicine. In his study, and at the bedside, the student will find Dr. Hartshorne a safe and accomplished companion."—DUBLIN MEDICAL PRESS.

POORE.—A Text-book of Electricity in MEDICINE and SURGERY, for the Use of Students and Practitioners. By GEORGE VIVIAN POORE, M.D.Lond., M.R.C.P., &c., Assistant-Physician to University College Hospital; Senior Physician to the Royal Infirmary for Children and Women. Crown 8vo, 8s. 6d.

TIDY. — Legal Medicine. By Charles MEYMOTT TIDY, M.B., F.C.S., Master of Surgery; Professor of Chemistry and of Forensic Medicine at the London Hospital; Official Analyst to the Home Office; Medical Officer of Health for Islington; late Deputy Medical Officer of Health and Public Analyst for the City of London, &c. Part I., with Illustrations, royal 8vo, 25s. Part II., royal 8vo, 21s.

GARDNER. — Household Medicine and SICK-ROOM GUIDE. By JOHN GARDNER, M.D., Author of "Longevity; the Means of Preserving Health, and Prolonging Life after Middle Age." The Eleventh Edition, much enlarged. Demy 8vo, 12s. 6d.

ROBERTS. — A Practical Treatise on URINARY and RENAL DISEASES, including Urinary Deposits. Illustrated by numerous Cases and Engravings. Fourth Edition, Revised and Enlarged. By Sir WM. ROBERTS, M.D., F.R.S., Fellow of the Royal College of Physicians, London; Professor of Medicine at the Victoria University, Consulting Physician to the Manchester Royal Infirmary. Assisted by ROBERT MAGUIRE, M.D.Lond., Member of the Royal College of Physicians, London, Physician to Out-patients, St. Mary's Hospital, London, late Pathologist to the Manchester Royal Infirmary. Small 8vo, 12s. 6d.

ROBERTS.—Lectures on Dietetics and DYSPEPSIA. Delivered at the Owens College School of Medicine in February and March, 1885. By Sir WILLIAM ROBERTS, M.D., F.R.S., Fellow of the Royal College of Physicians, London; Professor of Medicine at the Victoria University; Consulting Physician to the Manchester Royal Infirmary. Second Edition, small 8vo, 3s.

DA COSTA. — Medical Diagnosis with SPECIAL REFERENCE to Practical Medicine. A Guide to the Knowledge and Discrimination of Diseases. By J. M. DA COSTA, M.D., LL.D., Professor of Practice of Medicine and of Clinical Medicine at the Jefferson Medical College, Philadelphia; Physician to the Pennsylvania Hospital; Consulting Physician to the Children's Hospital, &c. Illustrated with Engravings on Wood. Sixth Edition, Revised, 8vo, 24s.

CHEMISTRY.

CHARLES.—The Elements of Physio- LOGICAL and PATHOLOGICAL CHEMISTRY. A Handbook for Medical Students and Practitioners. Containing a General Account of Nutrition, Foods, and Digestion, and the Chemistry of the Tissues, Organs, Secretions and Excretions of the Body in Health and in Disease. Together with the methods for preparing or separating their chief constituents, as also for their Examination in Detail, and an outline syllabus of a Practical Course of Instruction for Students. By T. CRANSTOUN CHARLES, M.D., F.C.S., Master of Surgery, Lecturer on Practical Physiology, St. Thomas's Hospital, London; late Medical Registrar, St. Thomas's Hospital; and formerly Assistant Professor and Demonstrator of Chemistry and Chemical Physics, Queen's College, Belfast, &c. With thirty-eight Woodcut Illustrations and one Chromo-lithograph, demy 8vo, 21s.

OBSTETRICS AND GYNÆCOLOGY.

BARNES.—System of Obstetric Medicine and SURGERY, Theoretical and Clinical. For the Student and Practitioner. By ROBERT BARNES, M.D., Obstetric Physician to St. George's Hospital, Consulting Physician to the Chelsea Hospital for Women, &c.; and FANCOURT BARNES, M.D., Physician to the Royal Maternity Charity and to the British Lying-in Hospital, Obstetric Physician to the Great Northern Hospital, Physician to the Chelsea Hospital for Women. Complete in 2 vols., with numerous Illustrations, 8vo, 38s.

*** The volumes are sold separately: Vol. I., 18s.; Vol. II., 20s.

"The book needs but to be read to be appreciated. The illustrations are numerous and well executed, contributing materially to the usefulness of the work. ..... The book is well "got up," handy in size, and will unquestionably prove a valuable companion, whether to the student acquiring a knowledge of obstetrics, or to the busy practitioner anxious to keep pace with the times. ..... We can confidently recommend it as a trustworthy guide, whether to the student or to the practitioner, and feel sure the book will meet with the success it well merits."—BRITISH MEDICAL JOURNAL.

BARNES.—A Manual of Midwifery for MIDWIVES. By FANCOURT BARNES, M.D. Aber., M.R.C.P. Lond.; Physician to the Royal Maternity Charity; Physician to the British Lying-in Hospital; Obstetric Physician to the Great Northern Hospital; Physician to the Chelsea Hospital for Women. Third Edition, crown 8vo, with numerous Illustrations, 6s.

BARNES.—A Synoptical Guide to the STUDY of OBSTETRICS. Being an Aid to the Student in the Class-room, in Private Study, and in Preparing for Examinations. By ROBERT BARNES, M.D., Obstetric Physician to St. George's Hospital, Consulting Physician to the Chelsea Hospital for Women, &c. Crown 8vo, 3s.

DORAN. — Clinical and Pathological OBSERVATIONS ON TUMOURS OF THE OVARY, FALLOPIAN TUBE, AND BROAD LIGAMENT. By ALBAN H. G. DORAN, F.R.C.S., Assistant-Surgeon to the Samaritan Free Hospital, formerly Anatomical and Pathological Assistant to the Museum of the Royal College of Surgeons of England. With 32 Illustrations, 8vo, 10s. 6d.

"Whether regarded from a clinical or from a pathological standpoint, the work not only does credit to its author, but will materially advance our knowledge upon all that concerns the question of ovarian tumours."—BRITISH MEDICAL JOURNAL.

PLAYFAIR.—The Systematic Treatment of NERVE PROSTRATION and HYSTERIA. By W. S. PLAYFAIR, M.D., F.R.C.P., Professor of Obstetric Medicine in King's College, Physician for the Diseases of Women and Children at King's College Hospital, late President of the Obstetrical Society of London. Crown 8vo, 2s. 6d.

ATLEE.—General and Differential Dia- GNOSIS OF OVARIAN TUMOURS, with Special Reference to the Operation of Ovariotomy, and Occasional Pathological and Therapeutical Considerations. By WASHINGTON L. ATLEE, M.D. With 30 Illustrations, 8vo, 20s.

JACOBI. — The Question of Rest for WOMEN DURING MENSTRUATION. By MARY PUTNAM JACOBI, M.D., Professor of Materia Medica in the Woman's Medical College, New York. With Illustrations, demy 8vo, 12s.

MISCELLANEOUS.

MORRIS—Skin Diseases: Including their Definitions, Symptoms, Diagnosis, Prognosis, Morbid Anatomy, and Treatment. A Manual for Students and Practitioners. By MALCOLM MORRIS, Joint Lecturer on Dermatology, St. Mary's Hospital Medical School; formerly Clinical Assistant, Hospital for Diseases of the Skin, Blackfriars. With Illustrations, crown 8vo, 7s. 6d.

GEE.—Auscultation and Percussion, to- gether with the other Methods of Physical Examination of the Chest. By SAMUEL GEE, M.D. With Illustrations, Third Edition, fcap. 8vo, 6s.

JULER.—Handbook of Ophthalmic Science and PRACTICE. Illustrated by numerous Woodcuts and Chromo-lithographs of Microscopic Drawings of Diseases of the Fundus and of other parts of the Eye. By HENRY JULER, F.R.C.S., Junior Ophthalmic Surgeon, St. Mary's Hospital; Senior Assistant-Surgeon, Royal Westminster Ophthalmic Hospital. 8vo, 18s.

BRAUN.—The Curative Effects of Baths and WATERS. Being a Handbook to the Spas of Europe. By Dr. J. BRAUN. With a Sketch on the Balneotherapeutic and Climatic Treatment of Pulmonary Consumption, by Dr. L. ROHDEN. An Abridged Translation from the Third German Edition, with Notes. By HERMANN WEBER, M.D.; F.R.C.P. Lond., Physician to the German Hospital. Demy 8vo, 18s.

"The best extant work on the subject. Not the least valuable part of the volume is a chapter on the treatment of phthisis by baths and climate."—WESTMINSTER REVIEW.

London: SMITH, ELDER, & CO., 15, Waterloo-place.

ROBERTS. — A Practical Treatise on URINARY and RENAL DISEASES, including Urinary Deposits. Illustrated by numerous Cases and Engravings. Fourth Edition, Revised and Enlarged. By Sir WM. ROBERTS, M.D., F.R.S., Fellow of the Royal College of Physicians, London; Professor of Medicine at the Victoria University, Consulting Physician to the Manchester Royal Infirmary. Assisted by ROBERT MAGUIRE, M.D. Lond., Member of the Royal College of Physicians, London, Physician to Out-patients, St. Mary's Hospital, London, late Pathologist to the Manchester Royal Infirmary. Small 8vo, 12s. 6d.

ROBERTS.—Lectures on Dietetics and DYSPEPSIA. Delivered at the Owens College School of Medicine in February and March, 1885. By Sir WILLIAM ROBERTS, M.D., F.R.S., Fellow of the Royal College of Physicians, London; Professor of Medicine at the Victoria University; Consulting Physician to the Manchester Royal Infirmary. Second Edition, small 8vo, 3s.

DA COSTA. — Medical Diagnosis with SPECIAL REFERENCE to Practical Medicine. A Guide to the Knowledge and Discrimination of Diseases. By J. M. DA COSTA, M.D., LL.D., Professor of Practice of Medicine and of Clinical Medicine at the Jefferson Medical College, Philadelphia; Physician to the Pennsylvania Hospital; Consulting Physician to the Children's Hospital, &c. Illustrated with Engravings on Wood. Sixth Edition, Revised, 8vo, 24s.

CHEMISTRY.

CHARLES.—The Elements of Physio- LOGICAL and PATHOLOGICAL CHEMISTRY. A Handbook for Medical Students and Practitioners. Containing a General Account of Nutrition, Foods, and Digestion, and the Chemistry of the Tissues, Organs, Secretions and Excretions of the Body in Health and in Disease. Together with the methods for preparing or separating their chief constituents, as also for their Examination in Detail, and an outline syllabus of a Practical Course of Instruction for Students. By T. CRANSTOUN CHARLES, M.D., F.C.S., Master of Surgery, Lecturer on Practical Physiology, St. Thomas's Hospital, London; late Medical Registrar, St. Thomas's Hospital; and formerly Assistant Professor and Demonstrator of Chemistry and Chemical Physics, Queen's College, Belfast, &c. With thirty-eight Woodcut Illustrations and one Chromo-lithograph, demy 8vo, 21s.

OBSTETRICS AND GYNÆCOLOGY.

BARNES.—System of Obstetric Medicine and SURGERY, Theoretical and Clinical. For the Student and Practitioner. By ROBERT BARNES, M.D., Obstetric Physician to St. George's Hospital, Consulting Physician to the Chelsea Hospital for Women, &c.; and FANCOURT BARNES, M.D., Physician to the Royal Maternity Charity and to the British Lying-in Hospital, Obstetric Physician to the Great Northern Hospital, Physician to the Chelsea Hospital for Women. Complete in 2 vols., with numerous Illustrations, 8vo, 38s.

*** The volumes are sold separately: Vol. I., 18s.; Vol. II., 20s.

"The book needs but to be read to be appreciated. The illustrations are numerous and well executed, contributing materially to the usefulness of the work. ..... The book is well "got up," handy in size, and will unquestionably prove a valuable companion, whether to the student acquiring a knowledge of obstetrics, or to the busy practitioner anxious to keep pace with the times. ..... We can confidently recommend it as a trustworthy guide, whether to the student or to the practitioner, and feel sure the book will meet with the success it well merits."—BRITISH MEDICAL JOURNAL.

BARNES.—A Manual of Midwifery for MIDWIVES. By FANCOURT BARNES, M.D. Aber., M.R.C.P. Lond.; Physician to the Royal Maternity Charity; Physician to the British Lying-in Hospital; Obstetric Physician to the Great Northern Hospital; Physician to the Chelsea Hospital for Women. Third Edition, crown 8vo, with numerous Illustrations, 6s.

BARNES.—A Synoptical Guide to the STUDY of OBSTETRICS. Being an Aid to the Student in the Class-room, in Private Study, and in Preparing for Examinations. By ROBERT BARNES, M.D., Obstetric Physician to St. George's Hospital, Consulting Physician to the Chelsea Hospital for Women, &c. Crown 8vo, 3s.

DORAN. — Clinical and Pathological OBSERVATIONS ON TUMOURS OF THE OVARY, FALLOPIAN TUBE, AND BROAD LIGAMENT. By ALBAN H. G. DORAN, F.R.C.S., Assistant-Surgeon to the Samaritan Free Hospital, formerly Anatomical and Pathological Assistant to the Museum of the Royal College of Surgeons of England. With 32 Illustrations, 8vo, 10s. 6d.

"Whether regarded from a clinical or from a pathological standpoint, the work not only does credit to its author, but will materially advance our knowledge upon all that concerns the question of ovarian tumours."—BRITISH MEDICAL JOURNAL.

PLAYFAIR.—The Systematic Treatment of NERVE PROSTRATION and HYSTERIA. By W. S. PLAYFAIR, M.D., F.R.C.P., Professor of Obstetric Medicine in King's College, Physician for the Diseases of Women and Children at King's College Hospital, late President of the Obstetrical Society of London. Crown 8vo, 2s. 6d.

ATLEE.—General and Differential Dia- GNOSIS OF OVARIAN TUMOURS, with Special Reference to the Operation of Ovariotomy, and Occasional Pathological and Therapeutical Considerations. By WASHINGTON L. ATLEE, M.D. With 30 Illustrations, 8vo, 20s.

JACOBI. — The Question of Rest for WOMEN DURING MENSTRUATION. By MARY PUTNAM JACOBI, M.D., Professor of Materia Medica in the Woman's Medical College, New York. With Illustrations, demy 8vo, 12s.

MISCELLANEOUS.

MORRIS—Skin Diseases: Including their Definitions, Symptoms, Diagnosis, Prognosis, Morbid Anatomy, and Treatment. A Manual for Students and Practitioners. By MALCOLM MORRIS, Joint Lecturer on Dermatology, St. Mary's Hospital Medical School; formerly Clinical Assistant, Hospital for Diseases of the Skin, Blackfriars. With Illustrations, crown 8vo, 7s. 6d.

GEE.—Auscultation and Percussion, to- gether with the other Methods of Physical Examination of the Chest. By SAMUEL GEE, M.D. With Illustrations, Third Edition, fcap. 8vo, 6s.

JULER.—Handbook of Ophthalmic Science and PRACTICE. Illustrated by numerous Woodcuts and Chromo-lithographs of Microscopic Drawings of Diseases of the Fundus and of other parts of the Eye. By HENRY JULER, F.R.C.S., Junior Ophthalmic Surgeon, St. Mary's Hospital; Senior Assistant-Surgeon, Royal Westminster Ophthalmic Hospital. 8vo, 18s.

BRAUN.—The Curative Effects of Baths and WATERS. Being a Handbook to the Spas of Europe. By Dr. J. BRAUN. With a Sketch on the Balneotherapeutic and Climatic Treatment of Pulmonary Consumption, by Dr. L. ROHDEN. An Abridged Translation from the Third German Edition, with Notes. By HERMANN WEBER, M.D.; F.R.C.P. Lond., Physician to the German Hospital. Demy 8vo, 18s.

"The best extant work on the subject. Not the least valuable part of the volume is a chapter on the treatment of phthisis by baths and climate."—WESTMINSTER REVIEW.

London: SMITH, ELDER, & CO., 15, Waterloo-place.

LEWIS'S STUDENTS' TEXT-BOOKS.

Now ready, the Eleventh Edition, Revised, demy 8vo, 15s.

A Handbook of Therapeutics. By Sydney Ringer, M.D., F.R.S., Professor of

Medicine in University College, Physician to University College Hospital, &c.

"The work supplies a felt want, giving useful information which can be obtained from no other book, and which is of the utmost value in practice. ..... The work has now become almost indispensable both to students of medicine and to practitioners."—PRACTITIONER.

Now ready, the Sixth Edition, in One Volume of over 1000 pages, with Illustrations, large 8vo, cloth, 21s.

A Handbook of the Theory and Practice of Medicine. By Frederick T. Roberts,

M.D., B.Sc., F.R.C.P., Examiner in Medicine at the Royal College of Surgeons, Professor of Therapeutics in University College, Physician to University College Hospital, and to the Brompton Hospital, &c.

"We heartily commend it as a reliable guide not less to the practical than to the theoretical study of medicine."—DUB. JOUR. OF MED. SCIENCE.
"We know of no work in the English language, or in any other, which competes with this one."—EDINBURGH MED. JOUR.
"Dr. Roberts may fairly be congratulated on having produced the best text-book of medicine we possess."—MEDICAL RECORD.

Third Edition, with numerous Illustrations, 8vo, 18s.

The Science and Art of Midwifery. By William Thompson Lusk, A.M., M.D. Ed.,

Professor of Obstetrics and Diseases of Women in the Bellevue Hospital Medical College, &c.

Just published, Fourth Edition, Revised, crown 8vo, 9s.

Elements of Practical Medicine. By

ALFRED H. CARTER, M.D. Lond., M.R.C.P. Lond., Physician to the Queen's Hospital, Birmingham, Examiner in Medicine for the University of Aberdeen, &c.

"A work which contains the essentials of medicine stated in clear and explicit language."—THE LANCET.

Now ready, with 50 Illustrations, small 8vo, 5s. 6d.

A Guide to the Examination of the Nose;

with REMARKS on the DIAGNOSIS of DISEASES of the NASAL CAVITIES. By B. CRESSWELL BABER, M.B. Lond., Surgeon to the Brighton and Sussex Throat and Ear Dispensary.

"The part of the work which includes almost everything belonging to the examination of the nasal cavities is so extraordinarily complete that we have the impression that if the different morbid processes and their treatment had been described by the same author, we should have had the best text-book that had ever been written."—INTERNATIONALE CENTRALBLATT FUR LARYNGOLOGIE, ETC.

Illustrated with Wood Engravings, &c., post 8vo, 10s. 6d.

Handbook of Diseases of the Eye and

their TREATMENT. By HENRY R. SWANZY, A.M., M.B., F.R.C.S., Examiner in Ophthalmic Surgery in the Royal College of Surgeons, Ireland, &c.

"This is an excellent text-book."—EDINBURGH MED. JOUR.

Just published, Seventh Edition, demy 32mo, 1s. 6d.

Syllabus of Materia Medica: for the Use

of Students, Teachers, and Practitioners. Based on the relative values of Articles and Preparations in the British Pharmacopœia (1885). By ALEXANDER HARVEY, M.D., Emeritus Professor, and ALEXANDER DYCE DAVIDSON, M.D., F.R.S. Edin., Regius Professor of Materia Medica in the University of Aberdeen.

Large 8vo, 25s.

A Treatise on Insanity. By William A.

HAMMOND, M.D., President of the American Neurological Association, &c.

By the same Author. Seventh Edition, royal 8vo, 25s.

Diseases of the Nervous System.

Second Edition, with Illustrations, 5s.

On the Use and Abuse of Pessaries. By

G. GRANVILLE BANTOCK, M.D., F.R.C.S. Edin., Surgeon to the Samaritan Free Hospital for Women and Children.

Now ready, crown 8vo, 8s. 6d.

Elements of Materia Medica and Pharmacy. By ALFRED W. GERRARD, F.R.C.S.,

Examiner to the Pharmaceutical Society, Teacher of Pharmacy and Demonstrator of Materia Medica to University College Hospital, &c.

Just published, Fourth Edition, post 8vo, 2s. 6d.

The Student's Manual of Venereal

DISEASES. Being a Concise Description of those Affections, and of their Treatment. By BERKELEY HILL, M.B. Lond., F.R.C.S., Professor of Clinical Surgery in University College, Surgeon to University College Hospital and to the Lock Hospital; and ARTHUR COOPER, L.R.C.P., M.R.C.S., Surgeon to the Westminster General Dispensary.

With Illustrations, small 8vo, 3s. 6d.

On some Common Injuries to Limbs; their

Treatment and After-Treatment, including Bone-setting (so-called). By EDWARD COTTERELL, M.R.C.S. Eng., L.R.C.P. Lond., late House-Surgeon, University College Hospital.

"This is a readable and useful little work."—THE LANCET.
"This small work is a very practical and useful one."—BRITISH MEDICAL JOURNAL.

Third Edition, considerably Enlarged, 12mo, 3s. 6d.

On Bedside Urine-testing: A Clinical

Guide to the Observation of Urine in the Course of Work. By GEORGE OLIVER, M.D. Lond.

Second Edition, copiously Illustrated, 8vo, 16s.

The Heart and its Diseases, with their

TREATMENT, including the GOUTY HEART. By J. MILNER FOTHERGILL, M.D., Physician to the City of London Hospital for Diseases of the Chest, &c.

Two Vols. large 8vo, 36s.

Niemeyer's Text-book of Practical Medicine.

Translated by Drs. HUMPHREY and HACKLEY.

Fourth Edition, with nearly 200 Illustrations, royal 8vo, 28s.

A Practical Treatise on the Medical and

SURGICAL USES of ELECTRICITY. By G. M. BEARD, A.M., M.D., and A. D. ROCKWELL, A.M., M.D., Fellow of New York Academy of Medicine.

Third Edition, Revised and Enlarged, crown 8vo, 6s.

Practical Histology and Pathology. By

HENEAGE GIBBES, M.D., Lecturer on Physiology and Histology in the Medical School of Westminster Hospital.

LEWIS'S PRACTICAL SERIES.

Now ready, 42 Illustrations, crown 8vo, 10s. 6d.

DISEASES OF THE KIDNEYS AND URINARY DERANGEMENTS.

A PRACTICAL TREATISE.

By C. H. RALFE, M.D. Cantab., F.R.C.P. Lond.,

Assistant-Physician to the London Hospital; Examiner in Medicine to the University of Durham.

I. Symptomatology. Clinical Examination of Urine. II. Structural Diseases—Diffuse Nephritis, Suppurative Nephritis, Lardaceous, Cystic, and other Degenerations; Cancer, Tumours, Parasites, Abnormalities. III. Functional Derangements—Hydruria, Polyuria, Anuria, Diabetes, Glycosuria, Stone and Gravel; Functional Albuminuria; Hæmoglobinuria; Appendix; Quantitative Analysis of Urine.

"Singularly well judged in its proportionate treatment of the various diseases of the kidneys, both usual and unusual."—THE LANCET.
"A distinct advance on anything previously published in this country on the subject."—LONDON MEDICAL RECORD.
"A monograph which, for accuracy and extent of information conveyed, it would be difficult to rival."—BRISTOL MED. CHIR. JOURNAL.

Just published, with Illustrations, crown 8vo, 4s. 6d.

Handbook of Diseases of the Ear. For the Use of Students and Practitioners.

By URBAN PRITCHARD, M.D. Edin., F.R.C.S. Eng., Professor of Aural Surgery at King's College, London; Aural Surgeon to King's College Hospital; Senior Surgeon to the Royal Ear Hospital.

Now ready, crown 8vo, with 228 Illustrations, 8s. 6d.

Bodily Deformities and their Treatment.

A Handbook of Practical Orthopædics. By H. A. REEVES, F.R.C.S. Ed., Senior Assistant Surgeon at the London Hospital, &c.

Now ready, crown 8vo, Illustrations, 3s.

Dental Surgery for General Practitioners

and STUDENTS of MEDICINE. By ASHLEY W. BARRETT, M.B. Lond., M.R.C.S., L.D.S., Dental Surgeon to the London Hospital, &c.

*** Other volumes in preparation.

London: H. K. LEWIS, 136, Gower Street, W.C.

Digitized by Google

H. K. LEWIS'S NEW PUBLICATIONS.

Now ready, with numerous Illustrations, demy 8vo, 12s. 6d.

Paralyses: Cerebral, Bulbar, and Spinal. A Manual of Diagnosis for Students and Practitioners. By H. CHARLTON BASTIAN, M.A., M.D., F.R.S., Examiner in Medicine at the Royal College of Physicians; Professor of Clinical Medicine and of Pathological Anatomy in University College, London; Physician to University College Hospital, and to the National Hospital for the Paralysed and Epileptic; Crown Referee in Cases of Supposed Insanity.

Now ready, Third Edition, Rewritten and Enlarged, with Illustrations, 8vo, 16s.

On Diseases of the Lungs and Pleuræ, including Consumption. By R. Douglas POWELL, M.D., F.R.C.P. Lond., Physician to the Middlesex Hospital, and to the Hospital for Consumption and Diseases of the Chest at Brompton.

"We commend this book as one which should be in the hands of every practitioner. It is plainly the outcome of wide experience, and it has been written in a thoughtful and practical manner, so that no one who studies its pages can fail to derive therefrom much that will stand him in good stead at the bedside."—THE LANCET, July 31st, 1886.

"This is a book for whose appearance we have waited with great expectations for some years. Now we have it we are in no way disappointed with its contents, and can heartily recommend it as the best treatise we know of on diseases of the lungs and pleuræ."—BIRMINGHAM MEDICAL REVIEW.

Now ready, crown 8vo, 3s. 6d.

Massage as a Mode of Treatment. By WILLIAM MURRELL, M.D., F.R.C.P., Lecturer on Pharmacology and Therapeutics at the Westminster Hospital, Examiner in Materia Medica in the University of Edinburgh, and to the Royal College of Physicians of London.

Fourth Edition, revised, limp roan, med. 24mo, 7s.

The Extra Pharmacopœia. With the Additions introduced into the British Pharmacopœia, 1885; and Medical References, and a Therapeutic Index of Diseases and Symptoms. By WILLIAM MARTINDALE, F.C.S., late Teacher of Pharmacy at University College, London, and W. WYNN WESTCOTT, M.B. Lond., Deputy Coroner for Central Middlesex.

Just published, fcap. 8vo, 2s.

Coca, Cocaine, and its Salts: their History, Medical and Economic Uses, and Medicinal Preparations. By WILLIAM MARTINDALE, F.C.S.

Just published, over 200 pp., 32mo, roan, 3s. 6d.

Lewis's Pocket Medical Vocabulary.

"This most useful little work should find a welcome corner on every library table."—LONDON MEDICAL RECORD.

"To the medical student, and as a book of reference for the general reader, this pocket volume will serve a useful purpose."—BRITISH MEDICAL JOURNAL.

Now ready, Second Edition, crown 8vo, 3s. 6d.

Gout and its Relations to Diseases of the LIVER and KIDNEYS. By ROBSON ROOSE, M.D., Fellow of the Royal College of Physicians in Edinburgh.

"It is one of the clearest and most complete reviews, in a small space, of existing knowledge with regard to this disease which we remember to have read, and it may be strongly recommended to the study of the young practitioner."—BRITISH MEDICAL JOURNAL.

"A record of personal observation and individual thought."—BRISTOL MED. CHIR. JOUR.

Just published, with Portrait of Dr. Benjamin Rush, demy 8vo, 7s. 6d.

The Insane in the United States and CANADA. By D. HACK TUKE, M.D., LL.D., F.R.C.P. Lond.

On plain paper, 10s. 6d. net; on gummed paper, 12s. 6d. net.

Materia Medica Labels. Adapted for Public and Private Collections. Compiled from the British Pharmacopœia of 1885.

Now ready, Second Edition, crown 8vo, with 44 Wood Engravings, 2s. 6d.

Illustrated Lectures on Ambulance Work. By R. LAWTON ROBERTS, M.D., M.R.C.S.

"The book is one which ought to be in the hands of all who take an interest in ambulance work."—THE LANCET.

"This is a very admirable series of lectures on ambulance work which should be in the hands of every member of the ambulance associations scattered throughout the country."—FAMILY CHURCHMAN.

*** Catalogue of H. K. LEWIS'S Publications post free on application.

London: H. K. LEWIS, 136, Gower Street, W.C.

THE NEW SYDENHAM SOCIETY.

President—SIR ANDREW CLARK, BART., M.D., LL.D.

Treasurer—W. SEDGWICK SAUNDERS, M.D., F.S.A. **Hon. Secretary**—JONATHAN HUTCHINSON, ESQ., F.R.S.

ANNUAL SUBSCRIPTION—ONE GUINEA.

The Series for 1885 *comprises—*

Handbook of Geographical and Historical PATHOLOGY. By Dr. AUGUST HIRSCH, Professor of Medicine in the University of Berlin. Vol. II. Translated by CHARLES CREIGHTON, M.D.

"The second volume of Professor Hirsch's great work is ..... marked by the same learning and industry, and the same judicial marshalling of facts on both sides of a question, which were the conspicuous excellences of the first volume. It is a library."—BRITISH MEDICAL JOURNAL.

"The whole work shows the master's hand; and we cannot be too grateful to the New Sydenham Society for presenting us with a translation of it. ..... Professor Hirsch's work is one of those which will be of permanent value, and one which no writer on medicine should fail to consult."—THE LANCET.

Clinical Lectures on the Practice of Medi- CINE. By ROBERT J. GRAVES, M.D., F.R.S. To which is prefixed a Criticism by Professor TROUSSEAU. Vol. II.

"This reprint of Graves' 'Practice of Medicine' once more places within the reach of every member of the profession a classical work by one of the greatest of clinical teachers. ..... It is, however, a work which ought to be studied in the original form, as presented in this issue."—BRITISH MEDICAL JOURNAL.

The New Sydenham Society's Lexicon of MEDICINE and the ALLIED SCIENCES. By HENRY POWER, M.B., and LEONARD SEDGWICK, M.D. Part XI.

The following form part of the Series for 1886:—

RECENT ESSAYS BY VARIOUS AUTHORS ON

BACTERIA IN RELATION TO DISEASE.

Selected and Edited by W. WATSON CHEYNE, Assistant Surgeon to King's College Hospital, &c. Illustrated by 8 Plates, mostly Coloured. [*Ready.*

"The members of the New Sydenham Society will receive in the first volume for the current year a valuable contribution to the literature of one of the most important subjects of the day."—THE LANCET.

"The volume is liberally illustrated, and will be very acceptable to the numerous workers on these subjects."—BRITISH MEDICAL JOURNAL.

Lexicon of Medicine and the Allied SCIENCES. Part XII. [*Ready.*

SPECIAL NOTICE TO NEW MEMBERS.—Members joining now and paying Four Guineas may secure the whole of the works issued for the years 1883, 1884, and 1885, as well as those for the present year, and they will be presented with One Guinea's worth of works, which they may select from the Surplus List. Arrangements will also be made to complete sets of works issued in these years.

Full information, with Lists of the Society's Publications and Surplus Volumes, will be sent, post free, to any address on application to Mr. LEWIS, the Society's Agent, to whom subscriptions should be forwarded.

URINARY and RENAL DERANGEMENTS and CALCULOUS

DISORDERS: On Diagnosis and Treatment. By LIONEL S. BEALE, M.B., F.R.S., F.R.C.P.; an Examiner in Medicine of the Examining Board in England appointed by the Royal Colleges of Physicians and Surgeons; Professor of Medicine in King's College, London; Physician to King's College Hospital.

CONTENTS:

Importance of Diluting the Fluids of the Body, and of Washing out the Tissues—Gouty Tendency—Acid Urine—Alkaline Treatment carried too far—Urea, and Excess of Urea—Uræmia—Uric Acid and Urates—Lithia, Ammonia, and other remedies in Gout—Deficiency of Chlorides in Pneumonia—Acetate of Ammonia and Citrate of Potash in Pneumonia—Excess of Sulphates: Action of Liquor Potassæ—Alkaline Phosphates.

URINARY DEPOSITS.

Opalescent Urine—Chylous Urine—Treatment—Uric Acid Gravel—Treatment—Treatment of Cases of Deposits of Oxalate of Lime—Dumb-bell Crystals of Oxalate of Lime—Remarkable Case of Cystine—Treatment by Ammonia—Significance of Phosphate Deposits—Hæmaturia—Hæmophilia—Hæmorrhage from the Kidney: Calculus in the Bladder—Entozoa—Treatment of Hæmaturia—Gallic Acid in Large Doses: Ergot of Rye—Hamamelis—Intermittent Hæmatinuria—Chronic Changes of Epithelial Surfaces—Value of Iodides—Leucorrhœa—Cancer of the Bladder: of the Kidney, Uterus—Chronic Inflammation of the Bladder—Large Quantities of Pus—Gall-stones in the Urine—Ulceration—Pelvic Cellulitis—Bacteria—Diet and Treatment—Pareira brava, Buchu, and Triticum repens in Catarrh of the Bladder—Irritability of the Bladder—Incontinence of Urine in Children—Accumulation of Urine in Bladder—Importance of Casts in Diagnosis of Renal Disease—Spermatozoa—Derangement of the Sexual Function—Mucous Casts from Seminal Tubes—Public Morality—"The Besetting Trial of Our Boys"—On raising the Standard of Public Morality, and on Social Purity.

SUBSTANCES IN SOLUTION NOT FOUND IN HEALTHY URINE.

Slight Albuminuria—Albumen in the Urine from Pressure on Large Veins—Albumen in the Urine from Passive Congestion—Albumen depending upon Changes in the Blood—Albumen from Affections of the Mucous Membrane of the Urethra, Bladder, or Pelvis of Kidney—Albumen in the Urine from the Menstrual Discharge—Albumen in the Urine, due to the Escape of Blood into the Urinary Passages or from the presence of Morbid Growths—From Stone in Kidney, Ureter, or Bladder—From Acute or Chronic Functional or Structural Changes in the Kidney itself—On the Nature of Structural Renal Changes—Acute Inflammation—Chronic Inflammation, with Enlargement—Chronic Wasting, with Contraction—Cirrhosis of the Liver and Kidney—Syphilitic Renal Disease—Treatment of Diseases of the Kidney—Catheter Fever—Treatment of Acute Renal Disease—Diet—Œdema—Anasarca—Uræmia—Ascites—Chronic Renal Disease—Warm Clothing—Air and Exercise—Sea-air—Diet—Pepsin—Stimulants—Iron—Digitalis—Treatment of Albuminuria of Advancing Age—Further Hints on the Treatment of Chronic Albuminuria—Milk Treatment—Treatment of Albuminuria dependent upon Syphilis—Bile—Jaundice from Obstruction—Treatment of Cases of Jaundice—Diabetes:—1. In the Young. 2. In the Middle-aged. 3. In the Old—Nervous Lesions—Coma—Impaired Sight and Cataract—Large Quantity of Urea in Diabetes—Treatment—Glycerine in Diabetes—Vegetables that may be eaten—Bran Cakes, Formula for making—Almond Cake—Glycerine Sponge-Cake—Skim-milk—Rennet and Pepsin in Diabetes—Alkaline Remedies—Purgatives—Opium and Codeia—Cinchonine, Quinine, and Strychnine.

ON URINARY CALCULI AND CALCULOUS DISORDERS.

Crystallisation in Viscid Matter—Concentric Layers—Different Classes of Urinary Calculi—Uric Acid—Calculi composed of Urates—Cystic Oxide: Cystine—Blood—Fatty Concretions—Oxalate of Lime—Large Calculi without any Symptoms—Calculus with long Spines projecting from it—Calculi in Patients who have had Cholera—Passage of Oxalate of Lime Calculi from the Kidney—Phosphate Calculi passed in large number—Prostatic Calculi—Sir Henry Thompson's Observations—On the Origin and Formation of Urinary Calculi—The Formation of Microscopic Calculi—Dumb-bell Crystals form the Nuclei of many Calculi—Collections of Dumb-bells in the Uriniferous Tubes—Frequency of the Occurrence of different kinds of Calculi—Of the Influence of Considerable Quantities of Fluid in preventing and relieving Calculous Disorders—On Dissolving Urinary Calculi—Of Injecting Solvent Fluids—Dr. Roberts' Experiments with Alkaline Carbonate—Treatment of Renal Calculus—Relief of Pain by Sedatives—Treatment by Complete Rest—Catheterism—On Washing out the Bladder—Instrument for Washing out the Bladder—Lithotomy—Lithotrity—Litholapaxy—Dr. Freyer's Operations—The Spontaneous Fracture of Calculi in the Bladder—Nephrotomy and Nephrectomy.

Now ready, Second Edition, price 5s.

100 URINARY DEPOSITS, with Directions for the Clinical Examination of Urine for PRACTITIONERS and STUDENTS.

Now ready, Second Edition, demy 8vo, pp. 275, price 5s.

SLIGHT AILMENTS: Their Nature and Treatment.

London: J. & A. CHURCHILL. Philadelphia: PRESLEY BLAKISTON, SON, & CO.

SIXTEENTH EDITION.

MATERIA MEDICA EXAMINATIONS.

BRITISH PHARMACOPŒIA.

The ORIGINAL COLLECTION of SPECIMENS of the ORGANIC MATERIA MEDICA of the British Pharmacopœia, for the use of

MEDICAL AND PHARMACEUTICAL STUDENTS.

Further enlarged by additions to the B.P., 1885, &c.

Specimen Label supplied with the Materia Medica Cabinet.

SUPPLEMENTARY SETS OF 12 SPECIMENS, to bring up to date the cases of the Fifteenth Edition, 3s. each.

BELÆ FRUCTUS.

BAEL FRUIT.

The dried half-ripe fruit of Ægle Marmelos.

NAT. ORD. Aurantiaceæ

HABITAT. Malabar and Coromandel.

Characters.—Fruit roundish, more or less twisted, about the size of a large orange, with a hard, woody, nearly smooth rind; usually imported in dried slices, or in fragments consisting of portions of the rind and adherent dried pulp and seeds. Rind about one-eighth inch thick, hard, and covered with a nearly smooth, pale-brown or greyish, firmly adherent epicarp; the pulp firm and brittle and of an orange-brown or cherry-red colour externally, but when broken it is seen to be nearly colourless internally. It has no odour, and its taste is simply mucilaginous and very slightly acid.

PREPARATION.—Extractum Belæ liquidum, 1 ounce in 1 fluid ounce.

New Edition of "THE ORGANIC MATERIA MEDICA," thoroughly Revised and greatly Enlarged, by the late W. SOUTHALL, F.L.S. Price 5s.

Price of the Collection, in a neat Wooden Box, £1 10s. and £2 net.

The Specimens in the more expensive set are packed separately in boxes, each being numbered, and a Key is supplied for explanation. *The Copyright of these Collections is registered.*

Catalogues of these and of various sets of Chemical Apparatus and Reagents, also of a Herbarium of Dried Medicinal Plants, free on application.

SOUTHALL BROS. & BARCLAY, Manufacturing Chemists, BIRMINGHAM.

THE INTERNATIONAL ENCYCLOPÆDIA OF SURGERY. A SYSTEMATIC

Treatise on the Theory and Practice of Surgery by Authors of Various Nations. Edited by JOHN ASHHURST, jun., M.D., Professor of Clinical Surgery in the University of Pennsylvania. Illustrated with Chromo-lithographs and Wood Engravings. In Six Volumes, Royal 8vo, 31s. 6d. each.

CONTENTS OF THE VOLUMES: Vol. I.—GENERAL SURGERY. OPERATIVE, MINOR, and PLASTIC SURGERY. AMPUTATIONS. Vol. II.—INJURIES and DISEASES which may occur in any part of the BODY. VENEREAL DISEASES. INJURIES and DISEASES of VARIOUS TISSUES of the BODY. Vol. III.—INJURIES and DISEASES of the NERVES, BLOODVESSELS, and BONES. Vol. IV.—INJURIES of BONES, DISEASES of JOINTS, EXCISIONS and RESECTIONS, TUMOURS, INJURIES of the BACK, and MALFORMATIONS and DISEASES of the SPINE. Vol. V.—REGIONAL SURGERY *(continued)*. Vol. VI.—REGIONAL SURGERY *(concluded)*. HISTORY of SURGERY. GENERAL INDEX to the whole of the SIX VOLS.

A SYSTEM OF MEDICINE. Edited by J. RUSSELL REYNOLDS, M.D., F.R.S., &c.

Vol. I.—GENERAL DISEASES; or AFFECTIONS of the WHOLE SYSTEM. 8vo, 25s. VOL. II.—LOCAL DISEASES.—The NERVOUS SYSTEM.—The DIGESTIVE SYSTEM. 25s. VOL. III.—LOCAL DISEASES.—The DIGESTIVE SYSTEM *(continued)*.—The RESPIRATORY SYSTEM. 8vo, 25s. VOL. IV.—LOCAL DISEASES.—DISEASES of the ORGANS OF CIRCULATION.—The HEART. 21s. Vol. V.—DISEASES of the ORGANS of CIRCULATION *(continued)*.—The BLOOD-GLANDULAR SYSTEM.—URINARY ORGANS.—FEMALE REPRODUCTIVE ORGANS.—CUTANEOUS SYSTEM.—GENERAL INDEX, &c., 25s.; or Complete in 5 Vols., Price £6.

Tables of Materia Medica. A COMPANION to the MATERIA MEDICA MUSEUM. By T. LAUDER BRUNTON, M.D., Sc.D., F.R.C.P., F.R.S., &c. New and Enlarged Edition. Demy 8vo, 10s. 6d.

Pharmacology and Therapeutics; or Medicine Past and PRESENT. By T. LAUDER BRUNTON, M.D., F.R.S. Crown 8vo, 6s.

The Practitioner's Handbook of Treatment; or the PRINCIPLES of THERAPEUTICS. By J. MILNER FOTHERGILL, M.D., Physician to the Victoria Park Hospital. Second Edition, Revised. 8vo, 16s.

Chemistry (A Treatise on). By Sir HENRY E. ROSCOE, F.R.S., and PROFESSOR SCHORLEMMER, F.R.S. With Illustrations. Vols. I. and II.—INORGANIC CHEMISTRY. Vol. I.—THE NON-METALLIC ELEMENTS. 8vo, 21s. Vol. II.—METALS. 2 Parts, 18s. each. Vol. III., ORGANIC CHEMISTRY. Two Parts, 21s. each. Vol. IV. Part I. *[In the Press.*

Compounds of Carbon, or Organic Chemistry (An Introduction to the Study of). By Professor IRA REMSEN. Crown 8vo, 6s. 6d.

An Introduction to the Study of Chemistry. By the same Author. Crown 8vo, 6s. 6d.

Lessons in Elementary Physiology. By THOMAS H. HUXLEY, F.R.S. Illustrated. New Edition. Revised, 18mo, 4s. 6d.

Elements of Chemical Physics. By PROFESSOR JOSIAH P. COOKE, JUN. 8vo, 21s.

Principles of Physics (A Text-book of). By ALFRED DANIELL, M.A., D.Sc. Second Edition, Revised and Enlarged, 8vo, 21s.

On Aneurysm, especially of the Thorax and the ROOT of the NECK. By R. BARWELL, F.R.C.S. Crown 8vo, 3s. 6d.

Comparative Embryology (A Treatise on). By F. M. BALFOUR, M.A., F.R.S. Illustrated. In 2 Vols. Vol. I., 18s. Vol. II., 21s.

The Antagonism of Therapeutic Agents, and What they Teach us. By J. M. FOTHERGILL, M.D. Crown 8vo, 6s.

Diseases of the Eye. By R. B. CARTER, F.R.C.S., 8vo, 16s.

Eyesight, Good and Bad. By R. BRUDENELL CARTER, F.R.C.S. Second Edition. Crown 8vo, 6s.

The Modern Operations for Cataract: being the Lettsomian Lectures for 1884. By R. B. CARTER, F.R.C.S. With a new Prefatory Note on the use of Cocaine in Cataract extraction. Demy 8vo, 6s.

The Morphology of the Skull. By Prof. PARKER, F.R.S., and G. T. BETTANY, B.Sc. Illustrated. Crown 8vo, 10s. 6d.

Micro-organisms and Disease: an Introduction into the Study of Specific Micro-organisms. By E. KLEIN, M.D., F.R.S. 6s.

Lessons on Prescriptions and the Art of Prescribing. By W. H. GRIFFITHS, Ph.D., L.R.C.P.E. 18mo, 3s. 6d.

Life-History Album: being a Personal Note-book, combining the chief advantages of a Diary, Photograph Album, a Register of Height, Weight, and other Anthropometrical Observations, and a Record of Illnesses. Containing Tabular Forms, Charts, and Explanations especially designed for popular use. Prepared by direction of the COLLECTIVE INVESTIGATION COMMITTEE of the BRITISH MEDICAL ASSOCIATION, and edited by FRANCIS GALTON, F.R.S. 4to, 3s. 6d.

Food for the Invalid, the Convalescent, the Dys- PEPTIC, and the GOUTY. By J. MILNER FOTHERGILL, M.D. 3s. 6d.

Spectrum Analysis. Six Lectures delivered before the Society of Apothecaries of London. By Sir HENRY E. ROSCOE, LL.D., F.R.S. Fourth Edition, Revised and considerably Enlarged by the Author, and by A. SCHUSTER, F.R.S., Ph.D. With Appendices. 8vo, 21s.

The Elements of Thermal Chemistry. By M. M. PATTISON MUIR, M.A., F.R.S.E., assisted by D. M. WILSON. 8vo, 12s. 6d.

Practical Chemistry for Medical Students. specially arranged for the First M.B. Course. By M. M. PATTISON MUIR. 1s. 6d.

The Osteology of the Mammalia (An Introduction to). By WILLIAM HENRY FLOWER, LL.D., F.R.S. Third Edition, Revised with the assistance of HANS GADOW, Ph.D., M.A. 10s. 6d.

On the Relation of the Chest Movements to Prognosis in Lung Disease, and on the application of Stethometry to Examinations for Life Assurance. By ARTHUR RANSOME, M.D. 8vo, 7s. 6d.

Lectures on Cataract: its Causes, Varieties and Treatment. Being Six Lectures delivered at the Westminster Hospital. By GEORGE COWELL, F.R.C.S. With Illustrations. Crown 8vo, 4s. 6d.

On the Pathology of Bronchitis, Catarrhal Pneu- MONIA, TUBERCLE, and ALLIED LESIONS of the HUMAN LUNG. By D. J. HAMILTON, M.B., F.R.C.S.E., F.R.S.E. 8vo, 8s. 6d.

A Text-book of the Physiological Chemistry of the ANIMAL BODY, including an Account of the Chemical Changes occurring in Disease. By ARTHUR GAMGEE, M.D., F.R.S. In 2 vols. Vol. I., 18s. Vol. II. *[In the Press.*

Text-book of Physiology. By Professor MICHAEL FOSTER, M.D., F.R.S., Illustrated. Fourth Edition. 8vo, 21s.

Text-book of Pathological Anatomy and Patho- GENESIS. By Professor ERNST ZIEGLER, of Tübingen. Translated and Edited for English Students by DONALD MACALISTER, M.A., M.D., B.Sc., F.R.C.P. With Illustrations. 8vo. Part I.—General. 12s. 6d. Part II.—Special. Sections I.-VIII., 12s. 6d. Sections IX.-XVII. *[In the Press.*

Comparative Anatomy (Elements of). By Professor GEGENBAUR. A Translation by F. J. BELL, B.A. Revised, with Preface, by Prof. E. RAY LANKESTER, F.R.S. With numerous Illustrations. 8vo, 21s.

The Fertilisation of Flowers. By Prof. H. MÜLLER. Translated and Edited by D'ARCY W. THOMPSON, B.A. 8vo, 21s.

Practical Instruction in Botany (A Course of). By F. O. BOWER, M.A., F.L.S., and SYDNEY H. VINES, M.A., D.Sc., F.R.S. Part I., Phanerogamic Pteridophyta. 6s.

Pharmacographia: a History of the Principal Drugs of VEGETABLE ORIGIN met with in GREAT BRITAIN and INDIA. By F. A. FLUCKIGER, M.D., and D. HANBURY, F.R.S. Second Edition, Revised. 8vo, 21s.

Elementary Biology. By THOMAS H. HUXLEY, F.R.S., and H. N. MARTIN. Crown 8vo, 6s.

An Atlas of Practical Elementary Biology. By G. B. HOWES. With a Preface by T. H. HUXLEY, F.R.S. 4to, 14s.

Practical Physiology: an Elementary Course. By Prof. M. FOSTER, F.R.S., and J. N. LANGLEY, F.R.S. Crown 8vo, 7s. 6d.

Physiography: an Introduction to the Study of NATURE. By THOMAS H. HUXLEY, F.R.S. New Edition. Crown 8vo, 6s.

Zootomy (Vertebrata): a Course of Instruction in. By Prof. T. J. PARKER. Illustrated. Crown 8vo, 8s. 6d.

Heat. By Prof. P. G. TAIT, M.A., Sec. R.S.E. 6s.

The Elements of Embryology. By Professor M. FOSTER, M.D., F.R.S., and the late FRANCIS M. BALFOUR, F.R.S. Second Edition, Revised. Edited by ADAM SEDGWICK, M.A., and WALTER HEAPE. With Illustrations. Crown 8vo, 10s. 6d.

Elementary Lessons in Anatomy. By ST. GEORGE MIVART, F.R.S. With 400 Illustrations. 18mo, 6s. 6d.

Elementary Practical Physics. By Professor BALFOUR STEWART, M.A., LL.D., F.R.S., and W. W. HALDANE GEE, B.Sc. Part I.—General Physical Processes. Part II.—Electricity and Magnetism. 6s. *[Just Ready.*

The Practitioner. A Monthly Journal of Therapeutics and Public Health. Edited by T. LAUDER BRUNTON, M.D., F.R.S., M.R.C.P., Assistant Physician to St. Bartholomew's Hospital, &c.; DONALD MACALISTER, M.A., M.D., B.Sc., F.R.C.P., &c., and J. MITCHELL BRUCE, M.A., M.D., F.R.C.P. Price 1s. 6d. monthly. Vols. I.-XXXVI. Half-yearly vols. 10s. 6d.

Brain. A Journal of Neurology. Edited by J. C. BUCKNILL, M.D., F.R.S.; C. BUZZARD, M.D., F.R.C.P.; J. CRICHTON BROWNE, M.D., F.R.S.E.; D. FERRIER, M.D., F.R.S.; J. HUGHLINGS JACKSON, M.D.; J. ROSS, M.D., F.R.C.P.; and A. DE WATTEVILLE, M.D. Published Quarterly. 8vo, 3s. 6d. (Part I. in January, 1878.) Yearly Vols. I. to VIII. 8vo, cloth. 15s. each

CHARLES GRIFFIN & CO.'S PUBLICATIONS.

SECOND EDITION OF LANDOIS AND STIRLING'S PHYSIOLOGY.

Now Ready, in Two Volumes, comprising 1300 pages, and nearly 600 Woodcuts, royal 8vo, cloth. Price 42s.

A TEXT-BOOK OF HUMAN PHYSIOLOGY;

INCLUDING HISTOLOGY AND MICROSCOPICAL ANATOMY, WITH SPECIAL REFERENCE TO PRACTICAL MEDICINE.

By Prof. LANDOIS, of Greifswald.

Translated from the Fifth German Edition, with Additions, by WM. STIRLING, M.D., Sc.D., Brackenbury Professor of Physiology in Owens College, Victoria University, Manchester; Examiner in the Honours School of Science, Univ. of Oxford.

"So great are the advantages offered by Prof. LANDOIS' TEXT-BOOK, from the EXHAUSTIVE and EMINENTLY PRACTICAL manner in which the subject is treated, that it has passed through FOUR large editions in the same number of years. ..... Dr. STIRLING'S annotations have materially added to the value of the work. Admirably adapted for the PRACTITIONER. ..... With this Text-book at command, NO STUDENT COULD FAIL IN HIS EXAMINATION."—THE LANCET.

"One of the MOST PRACTICAL WORKS on Physiology ever written, forming a 'bridge' between Physiology and Practical Medicine. ..... Its chief merits are its completeness and conciseness. ..... The additions by the Editor are able and judicious. ..... EXCELLENTLY CLEAR, ATTRACTIVE, and SUCCINCT."—BRITISH MEDICAL JOURNAL.

"The great subjects dealt with are treated in an admirably clear, terse, and happily-illustrated manner."—PRACTITIONER.

"As a work of reference, LANDOIS and STIRLING'S Treatise OUGHT TO TAKE THE FOREMOST PLACE among the text-books in the English language. The woodcuts are noticeable for their number and beauty."—GLASGOW MEDICAL JOURNAL.

"We have no hesitation in saying that THIS IS THE WORK to which the PRACTITIONER will turn whenever he desires light thrown upon the phenomena of a COMPLICATED or IMPORTANT CASE. To the STUDENT it will be equally valuable."—EDINBURGH MEDICAL JOURNAL.

By PROFESSOR THORBURN.

Now ready, royal 8vo, 21s.

THE DISEASES OF WOMEN (A PRACTICAL TREATISE ON). Prepared with special reference to the Wants of the General Practitioner and Advanced Student. By JOHN THORBURN, M.D., F.R.C.P., late Professor of Obstetric Medicine, Owens College and Victoria University, Manchester. With Chromo-lithograph and over 200 Illustrations.

By WILLIAM AITKEN, M.D., F.R.S.,

Professor of Pathology in the Army Medical School; Examiner in Medicine for the Military Medical Services of the Queen.

THE SCIENCE AND PRACTICE OF MEDICINE. In Two Volumes, Seventh Edition, royal 8vo, with numerous Illustrations, 42s.

OUTLINES OF THE SCIENCE AND PRACTICE OF MEDICINE. Second Edit., crown 8vo, 12s. 6d.

By DRS. PORTER and GODWIN.

In the Press, Third Edition, with numerous Illustrations. Leather.

THE SURGEON'S POCKET-BOOK. Specially adapted to the Public Medical Services. By SURGEON-MAJOR J. H. PORTER, late Assistant-Professor of Military Surgery in the Army Medical School. Third Edition, Revised and in part Re-written by SURGEON-MAJOR C. H. GODWIN, of the Army Medical School.

By DRS. DUPRÉ AND HAKE.

In crown 8vo.

CHEMISTRY (A MANUAL OF). By AUGUSTE DUPRÉ, Ph.D., F.R.S., and H. WILSON HAKE, Ph.D., F.C.S., of the Westminster Hospital.

PART I.—INORGANIC CHEMISTRY, with Coloured Table of Spectra. 7s. 6d. Ready.
PART II.—ORGANIC CHEMISTRY. In preparation.

NEW WORK by PROFESSOR M'CALL ANDERSON.

Shortly, in royal 8vo, Illustrated.

SKIN DISEASES (A TEXT-BOOK OF). By M'CALL ANDERSON, M.D., &c., Professor of Clinical Medicine in the University of Glasgow.

By PROFESSOR MEYER and A. F. FERGUS, M.B.

Shortly, in royal 8vo, with numerous Illustrations, and 4 Coloured Plates.

OPHTHALMOLOGY (A MANUAL OF). By Dr. EDWARD MEYER, Prof. à l'Ecole Pratique de la Faculté de Médecine de Paris. Translated, with the assistance of the Author, from the Third French Edition, by A. FRESLAND FERGUS, M.B.

*** This work has been translated into Six Languages.

By PROFESSOR HADDON, M.A.

Shortly, in royal 8vo, with numerous Illustrations.

EMBRYOLOGY (A MANUAL OF). For the Use of Students. By ALFRED C. HADDON, M.A., F.Z.S., Professor of Zoology at the Royal College of Science, Dublin.

London: CHARLES GRIFFIN & CO., Exeter Street, Strand.

Post free, 13 stamps.

A Method of Case-Reporting, for Clinical Clerks. By T. CHURTON, M.D., Physician to the Leeds Infirmary, and Lecturer on Medicine in the Yorkshire College.

"Dr. Churton's 'method' appears to be the most thorough and scientific which has ever been drawn up."—BRITISH MEDICAL JOURNAL.

Leeds: McCorquodale & Co., Basinghall-street.

Second Edition, with Plates, 8vo, price 15s.

Diseases of the Chest.

Second Edition, Revised and Enlarged. Part I.: Diseases of the Lungs. Part II.: Diseases of the Heart and Thoracic Aneurism. By A. T. H. WATERS, M.D., F.R.C.P., Physician to the Royal Infirmary and late Professor of Medicine in University College, Liverpool.

J. & A. Churchill, 11, New Burlington-street.

BY DR. GEORGE HARLEY, F.R.S.

DISEASES of the LIVER.

"A storehouse of practical information."—CANAD. PRACT.

"The subjects dealt with are marvellously great."—MED. TIMES.

"No book can be advantageously compared to it."—JOURN. DE MED.

"Most excellent and thoroughly practical."—EDIN. MED. JOURN.

"The best authority on the liver that can be found"—MED. REGIST.

"For originality of thought and diagnostic sagacity this work stands unexampled."—AUSTR. MED. GAZ.

38 Illustrations, price One Guinea.—J. & A. Churchill.

Just ready, price 3s. 6d.

Artificial Limbs and the Amputations which afford most appropriate stumps in civil and military Surgery: together with descriptions of the best Prothetic Appliances, and also of the Government Regulation Appliances. Illustrated by the Author with numerous pen-and-ink drawings.

By HEATHER BIGG,

Assoc. Inst. C.E., Acting Surgeon 22nd Middlesex R.V.

Published by the Author at 56, Wimpole-street.

Also 20th Thousand, price 3s. 6d.

Curvature of the Spine, including its Origin, CLASSIFICATION, and MECHANICAL TREATMENT. Illustrated by the Author with numerous pen-and-ink drawings.

Messrs. J. & A. Churchill, or of the Author, 56, Wimpole-street, W.

PRACTICAL WORKS BY

Dr. J. Milner Fothergill,

Author of "The Practitioner's Handbook of Treatment" and "The Physiological Factor in Diagnosis."

THE HEART and its DISEASES, with their TREATMENT: Including the Gouty Heart. Second Edition, pp. 516, 8vo, 16s.

CHRONIC BRONCHITIS, its FORMS and their TREATMENT, 8vo, pp. 160, 4s. 6d.

INDIGESTION, BILIOUSNESS, and GOUT.

Part I.—Indigestion and Biliousness. 8vo, pp. 390, 7s. 6d.

Part II.—Gout in its Protean Aspects. 8vo, pp. 302, 7s. 6d.

The DISEASES of SEDENTARY and ADVANCED LIFE. (Just out.) Large 8vo, pp. 295, 7s. 6d.

The London Medical Record for August 16th contains, with many other articles:—Weigert on Coagulative Necrosis; Fortünatoff and Scheltzoff on the Physiological Action of Bitter Substances on Digestion; Grützner on the Physiology of Gastric Digestion; The Communicability and Infectiousness of Tuberculosis; Schwabach on Diseases of the Ear in connexion with Diabetes Mellitus; Raptchevsky on the Morphology and Biology of Koch's Cholera-Bacillus; Beevor and Horsley on the Treatment of Tumours of the Brain. Selected Abstracts from English and Foreign Journals of the Newest Papers on Surgery, Therapeutics, Pharmacology, Obstetrics, Gynæcology, and Dermatology. Reviews of the Newest English and Foreign Books. Notices of New Preparations and New Instruments.

Price, 1s. 6d. Annual Subscription, 18s.; postage paid, 19s. 6d.

London: Smith, Elder, & Co 15, Waterloo-place, S.W.

Now ready. Second Edition. Adapted to the New British Pharmacopœia, 1885. Medium 8vo, price 21s.

A Text-book of Pharmacology, Therapeutics, and MATERIA MEDICA. By T. LAUDER BRUNTON, M.D., D.Sc., F.R.S., Fellow of the Royal College of Physicians; Assistant Physician and Lecturer on Materia Medica at St. Bartholomew's Hospital; Examiner in Materia Medica in the University of London, in the Victoria University, and in the Royal College of Physicians, London; late Examiner in the University of Edinburgh. Adapted to the United States Pharmacopœia by F. H. Williams, M.D., Boston, Mass.

"It is simply a mine of wealth both for students and practitioners. It is thoroughly practical and thoroughly reliable, ... is undoubtedly the best treatise on the subject in the English language."—BRITISH MEDICAL JOURNAL.

"A work which marks a distinct epoch, a turning-point in the history of medicine. It is not a mere compilation, ... But it is essentially a new departure, breaking away from well-worn tracks into a new and almost unknown region."—MEDICAL TIMES AND GAZETTE.

BY THE SAME AUTHOR.

Disorders of Digestion: Their Consequences and Treatment.—This work contains, in addition to the *Lettsomian Lectures*, a number of other Papers by the Author on similar subjects. Demy 8vo, 10s. 6d.

London: Macmillan & Co., Bedford-street, Covent-garden.

Just published, price 3s.; free by post, 3s. 4½d.

The Owens College Calendar for the Session 1886-87.

London: Macmillan & Co. Manchester: J. E. Cornish.

Post free, 12 stamps.

On Cancer, Tumours, and Ulcers of the BREAST, LIP, TONGUE, SKIN, &c. &c. Observations founded on thirty years experience and the treatment of many thousand cases. By ALEX. MARSDEN, M.D., F.R.C.S., Consulting and Senior Surgeon to the Cancer Hospital.

London: Wyman & Sons, 76, Great Queen-street, W.C.

Royal 8vo, pp. 770, Illustrated, cloth 21s., leather 24s.

A History of the Royal College of SURGEONS in IRELAND and IRISH MEDICAL INSTITUTIONS and LITERATURE, ANCIENT and MODERN; including 300 Biographies. By Sir CHARLES CAMERON, President R.C.S.I.

Dublin: Fannin & Co.

London: Baillière, Tindall, & Co.

Text-book of Operative Surgery and SURGICAL ANATOMY. 88 Coloured Plates. Half Calf, £2 10s.; Uncoloured, £1 5s. [*New Edition now ready.*

Affections of Throat and Larynx. 6s.

Osteology for Students. 7s. 6d.

Examiner in Anatomy. 5s.

Hoarseness and Loss of Voice. 1s.

By ARTHUR TREHERN NORTON, F.R.C.S.,

Surgeon, and Surgeon in charge of Throat Department, and Lecturer on Surgery, at St. Mary's Hospital.

London: Baillière, Tindall, & Cox, 20, King William-street, Strand, W.C.

Now ready, price 2s. 6d.

Syphilitic Eruptions. Containing a Contrasted Parallel of the Stages and Symptoms of Inherited and Acquired Syphilis. By JAMES STARTIN, late Honorary Surgeon and Lecturer to St. John's Hospital for Skin Diseases, Leicester-square, W.C. Published by Messrs. Renshaw and Sons, Strand.

Price 2s. 6d.

PARASITIC DISEASES of the SKIN, with Illustrations. By the same Author.

Published by Messrs. Lewis and Son, Gower-street, W.C.

Now ready, Illustrated, price 6s. 6d.

Post-Nasal Catarrh and Diseases of the NOSE CAUSING DEAFNESS.

Being Vol. I. of 3rd Edition of Deafness, Giddiness, and Noises in the Head.

By EDWARD WOAKES, M.D. Lond.,

Senior Aural Surgeon to the London Hospital; and Lecturer on Aural Surgery at the Medical School; Senior Surgeon to the Hospital for Diseases of the Throat.

London: H. K. Lewis, Gower-street, W.C.

Second Edition, Revised and Enlarged, Illustrations, 8vo, 12s. 6d.

Lectures on Mental Disease. By W. H. O. SANKEY, M.D. Lond., F.R.C.P., late Lecturer on Mental Diseases, University College, London; Proprietor of Boreatton Park Asylum.

"Les leçons cliniques de M. Sankey méritent à coup sûr le succès qu'elles ont obtenu. Elles n'instruisent pas seulement, elles contraignent le lecteur à réfléchir. Je ne puis qu'engager les aliénistes qui connaissent l'Anglais à les lire attentivement. Ils en tireront profit."—ANNALES MÉDICO-PSYCHOLOGIQUES.

"Dr. Sankey's classification of mental diseases is original, and in our opinion much more scientific than those which are usually received.

"The closing chapter of the book is on the legal relations of insanity. We commend this chapter to our readers as worthy of perusal, especially at the present time, when the subject of certifying lunatics has been so specially brought under the notice of the profession by recent cases in the law courts."—LIVERPOOL MEDICO-CHIRURGICAL JOURNAL.

London: H. K. Lewis, 136, Gower-street, W.C.

Now ready, price 4s. 6d.

ORTHOPÆDIC APPARATUS.

A SERIES OF

ILLUSTRATED PLATES,

With Corresponding Descriptions of the

VARIOUS FORMS OF MECHANISM

Employed in the Treatment and Cure of the numerous

DEFORMITIES of the HUMAN BODY.

ON THE TREATMENT
OF
WOUNDS AND FRACTURES.
By SAMPSON GAMGEE, F.R.S.E.

THE LANCET.—"Mr. Gamgee is an author who always well repays study. ..... The cases by which he illustrates hi teaching are numerous, to the point, and well told."

MEDICAL TIMES AND GAZETTE.—"These lectures are what, in our opinion, clinical lectures ought to be. The cardinal principles of the treatment of surgical injuries are carefully explained and abundantly illustrated by typical cases."

BIRMINGHAM MEDICAL REVIEW.—"This work is elegantly written; full of logical argument and scientific truth. t teems with valuable clinic – cases."

EDINBURGH MEDICAL JOURNAL.—"We have no esitation in recommending Mr. Gamgee's lectures to our readers. They are very interesting, full of instructive cases, and hreplete with sound practical suggestions."

J. & A. CHURCHILL, 11, New Burlington-street.

NOTICE TO THE MEDICAL PROFESSION.

82, HIGH HOLBORN.

MRS. KIMPTON begs to offer her grateful acknowledgment to those Gentlemen of the Medical Profession who have so kindly and liberally supported her in the business, and earnestly to solicit a continuance of their favours, to which, with the help of her youngest son and competent assistants, she can undertake to give prompt and accurate attention.

MRS. KIMPTON greatly regrets that during her temporary relinquishment of the control of the business it should have been allowed to fall into difficulties, and she confidently appeals to her customers to second the efforts she is now making to replace it on its former long-sustained respectable footing.

It is with deep regret that MRS. KIMPTON feels herself obliged to add that her eldest son, Mr. H. B. KIMPTON, will henceforth have no part in the management, so that there will be no connexion whatever between him and herself in any future transactions, the business left to MRS. H. KIMPTON by her late husband will be carried on as usual under the name of HENRY KIMPTON, entirely at the old address,

82, HIGH HOLBORN.

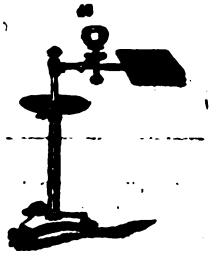
JOHN WARD,



INVALID CHAIR MANUFACTURER

TO HER MAJESTY AND THE ROYAL FAMILY,

246 & 247, TOTTENHAM COURT ROAD.

(Late of Saville House, Leicester-square.)

PRIZE MEDALS.—London, 1851 and 1862. Paris, 1855 and 1867. Dublin, 1865. Two Medals, Vienna, 1873. Three Prize Medals, Paris, 1878.

No. 19. A Victoria 2-wheel Bath Chair, with leather head folding German shutter and patent spring front iron, to which shafts for a pony may be attached.

No. 46. Reading Stand, for holding a book in any position. Suitable for Chair, Couch, or Bed. Portable for travelling.

No. 11 is Ward's Improved Recumbent Chair, with double rising leg-rest and shifting elbows, to enable an invalid to be shifted on and off with perfect ease.

No. 1. Self-propelling Chair, mounted upon 24-inch rim wheels outside; may be used by a child eight years of age with the greatest ease.

No. 10 is Hari's general Invalid Couch, made with or without a convenience; it adjusts the back seat and legs to any given position by means of machinery, and is recommended by the Faculty as being the most complete Bed ever made for confirmed invalids or for fractured limbs.

No. 14 is the simplest and best-constructed Chair for carrying Invalids up and down stairs; the lower handles for level ground, the upper ones for ascending or descending a staircase. The sketch conveys the exact idea. It is also made portable for travelling. Several other kinds are always in stock upon vario us principles.

The largest Assortment in the World of Invalid Chairs and Carriages—Sale or Hire.

SENIER'S ASTHMA REMEDY.

THE ORIGINAL AMERICAN REMEDY.

Sample and instructions free to any Medical Man by enclosing card to London Depôt—A. SENIER & CO., 88, Norwood-road, London, S.E.
Price, per box, 1s. 9d.; by post, 1s. 11d. American Laboratory, Milwaukee, U.S.A.

EVANS' FLUID EXTRACTS. (1 oz. = 1 oz. of the Drug.)

THESE are prepared by elaborate processes, with the menstruum most suited to each individual drug; in odour and taste they well represent the crude drug, and in strength they contain the *whole* of the active medicinal properties. Infusions, decoctions, tinctures, wines, and syrups can be at once obtained from these fluid extracts, by simply mixing one minim for every grain of the drug ordered; this is perhaps the most perfect method of making such preparations of an accurate strength. They are put up in actinic glass bottles of 5, 10, and 20 fluid ounces, capsuled, with a large gold front label; a special feature, to assist in dispensing, is the back label, containing full scientific names, botanical origin, description, medical properties, dose, strength, active ingredients, &c., &c. Complete list of about 100 kinds, with prices, free on application.

EVANS, LESCHER, & WEBB, 60, Bartholomew Close, London. EVANS, SONS, & CO., 56, Hanover-st., Liverpool.
PARIS AND MONTREAL.—*Their Export List, Spanish and English, forms an excellent Advertising Medium for Proprietary Articles. Circulated to the Trade in every quarter of the Globe.*

SELLERS' QUINQUININE (The entire active principles of Cinchona Bark.)

SELLERS' MISTURA BISMUTHI COMP.

(REGISTERED).

J. SELLERS begs to say he is the inventor and sole maker of GENUINE QUINQUININE and MISTURA BISMUTHI COMP., and that any imitation of the above titles is illegal and calculated to mislead the purchaser. Medical Men, Chemists, and others will oblige by specifying "Sellers' Preparations" when giving their orders, as the vending or dispensing spurious articles can only be detrimental to all parties.

SELLERS' QUINQUININE is sold in 1 oz. and 4 oz. bottles, 3s. per oz.
SELLERS' MIST. BISMUTHI CO. in 4 oz., 8 oz., 1 lb., 2 lb, and 5 lb. bottles, 10s. per lb. } *Subject to a liberal Trade Discount.*

To be obtained of all Wholesale Druggists and Patent Medicine Warehouses, or direct from the Proprietor,

J. SELLERS, Manufacturing Chemist, 9, Farringdon-road, London, E.C.

WRIGHT'S LIQUOR CARBONIS DETERGENS

See Recommendatory Notices of Medical Press and Opinions of the leading Dermatologists

Extract from the Proceedings of the Royal Society, Edinburgh.

"Experiments on the Chief Disinfectants of Commerce with a view of ascertaining their Power of Destroying the Spores of the Anthrax Bacillus, by a Medical Officer of Health and Public Analyst.

"LIQUOR CARBONIS DETERGENS.—This is a solution of certain coal-tar products in spirit. It forms with water an emulsion. Added to water in the proportion of 5 per cent., it had but feeble influence in preventing the subsequent growth of anthrax. A 10 per cent. solution, acting for four hours, distinctly retarded growth, for the spores, whether on gelatin-pork or in the broth, did not commence developing for twenty-four hours. Undiluted Liquor Carbonis Detergens, acting for four hours arrested future growth."

THE PRACTITIONER of September, 1881:—"Itching, which owes its origin to too slow a current of blood, of which the most typical example is that seen in Eczema connected with varicose veins of the leg—also Pruritus Scroti, Labiorum and Ani—is best relieved by weak tarry lotions, one of the best of which is Wright's Liquor Carbonis Detergens; a well-made alcoholic solution of coal tar suitably diluted."

From THE LANCET, Dec. 22nd, 1866:—"In our hands it has been a most effective agent in skin diseases, especially of the chronic eczematous class; and one case of psoriasis, which had resisted all other kinds of treatment, speedily got well under the application of the Liquor Carbonis Detergens. We esteem it a very valuable addition to our list of skin remedies."

From the MEDICAL TIMES AND GAZETTE, January 19th, 1867:—"We have more than once called attention to the value of this remedy in chronic eczema."

From the BRITISH MEDICAL JOURNAL, September 22nd, 1871:—"We have tested it, and can affirm its value as a detergent agent. We consider the Liquor is an article of great utility."

CARBONIS DETERGENS.

Kept in stock and sold by all Druggists (Wholesale and Retail) throughout the United Kingdom and Colonies.

Proprietors: W. V. WRIGHT & CO., Southwark, London, S.E.

GOUT & RHEUMATISM.

(Guaranteed no deposit, and will keep good any length of time.)

We guarantee each fluid drachm to contain:—

1 Grain PHOSPHATE OF IRON.
1 Grain PHOSPHATE OF QUININE.
½ Grain PHOSPHATE OF STRYCHNINE.

Beyond question the Syr. Eastoni is one of the best Nerve Tonics we have, but for the fact of its want of stability in keeping free from deposit, would have been much more largely prescribed by the Medical Profession. We have now overcome this difficulty, and the Medical Profession prescribing Syr. Eastoni (Hewlett's) may rest assured their patients will receive the proper quantities of each of the ingredients they are anxious for them to have.

We would specially impress on the Medical Profession that our Liquor and Syr. Eastoni are strictly prepared according to the above formulæ. We mention this, as cheap imitations, containing little or no quinine, are placed on the Markets, to the disappointment of the Physician and injury to the Patient. We invite Pharmaceutical Chemists to examine this preparation for themselves.

Packed for Dispensing only in 5-oz., 10-oz., and 22-oz. bottles.—Physicians will oblige by writing "Syr. Eastoni (Hewlett).

Specially prepared by C. J. HEWLETT & SON, 40, 41, & 42, Charlotte-street, London, E.C.

SCHACHT'S PREPARATIONS.

LIQUOR BISMUTHI (SCHACHT). Dose, 1 drachm diluted.

Carefully purified from Arsenic, Tellurium, and other contaminations.
Invented and Introduced to the Profession by Mr. G. F. SCHACHT in 1855.

SYRUPUS CINCHONÆ ALCOHOLICUS (SCHACHT).

Bark minus Woody Fibre. Dose: 10 to 60 drops, diluted.

SCHACHT'S COD-LIVER OIL EMULSION.

A white creamy emulsion of *very agreeable flavour*, containing 75 per cent. of pure pale Cod-Liver Oil.
With Hypophosphites if desired. Price 2s. 3d. and 4s. per bottle.

To be obtained of Messrs. Barclay & Sons, W. Edwards & Son, and all Wholesale Druggists.

GILES, SCHACHT, & CO., 52, Royal York Crescent, Clifton, Bristol.

LISTERIAN ANTISEPTIC DRESSINGS.

JOHN MILNE'S DRESSINGS are the only Genuine Listerian Antiseptic Dressings in the commercial world. They are manufactured under the direct supervision of Professor SIR JOSEPH LISTER, **who uses no other whatsoever.**

ABSOLUTELY PURE ENGLISH DRAWN

SANDAL WOOD OIL.

THE FINEST OIL THAT CAN BE POSSIBLY OBTAINED, AND ALWAYS UNIFORM.

Dr. HENDERSON, of Glasgow, writes:—

It is a pure Oil of a high character. I have tried it in numerous cases of Gonorrhœa. It was rapidly successful in all. The Oil disagreed with no one.

W. J. BUSH & CO., Distillers and Importers of Essential Oils, Artillery-lane, London, E.

BROMIDIA.

FORMULA.—Every fluid drachm contains 15 grs., EACH, of pure Brom. Potas. and purified Chloral, and 1-8 gr., EACH, of gen. ext. Cannabis Ind. and Hyoscyam.

DOSE.—One-half to one fluid drachm in WATER or SYRUP every hour until sleep is produced.

BROMIDIA IS THE HYPNOTIC PAR EXCELLENCE.

It produces refreshing sleep, and is exceedingly valuable in sleeplessness, nervousness, neuralgia, headache, convulsions, colics, &c., and will relieve when opiates fail. Unlike preparations of opium, it does not lock up the secretions. In the restlessness and delirium of fevers it is absolutely invaluable.

PEARS SOAP

Pure, Fragrant, Refreshing.

Sir ERASMUS WILSON, late President of the Royal College of Surgeons of England, writes—"PEARS' SOAP is of the nicest and most careful manufacture, and the most refreshing and agreeable of balms for the skin."

SOLD EVERYWHERE.

Since the introduction of Pepsine by BOUDAULT and Dr. L. CORVISART, BOUDAULT'S Preparations have been considered the most reliable.

BOUDAULT'S PEPSINE.

The Paris Hospitals have used no other.

The Jury of the International Exhibition, Paris, 1867, awarded to BOUDAULT'S Preparations the *only* Medal given for Pepsine. Since that time it has taken the Medal at each of the International Exhibitions—Havre, Lyons, Vienna, Philadelphia, and Paris 1878.

Boudault's Pepsine—Dose, 5 to 10 grains—inbottles, one ounce, 5s.; in bottles, half an ounce, 3s.
Boudault's Pepsine Wine—Dose a tablespoonful—in bottles, 4s. and 8s.
Boudault's Pepsine Pills and Lozenges—Dose, 2 to 4—in bottles, 3s. 3d.

HOTTOT BOUDAULT, 7, Avenue Victoria, Paris. SQUIRE, 413, Oxford Street, London.
CAN BE HAD OF ALL CHEMISTS.

BULLOCK'S PEPSINA PORCI.

DOSE—2 to 4 grains.

Since the Introduction by Dr. LIONEL BEALE of PEPSINA PORCI, Mr. BULLOCK has devoted special attention to its manufacture.

BULLOCK'S ACID GLYCERINE OF PEPSINE

DOSE—1 to 2 drms.

Possesses at least three times the digestive power (and in most cases considerably more) than any other preparation of Pepsine and Glycerine, or fluid form of Pepsine whatever.

May be prescribed with most substances compatible with acids. In 4 oz., 8 oz., and 16 oz. bottles, and in bulk.

The published experiments of G. F. DOWDESWELL, Esq., B.A.Cantab., F.C.S., F.L.S., &c., Dr. PAVY, Professor TUSON, the late Professor GARROD, and others, conclusively demonstrated the marked superiority of BULLOCK'S PEPSINA PORCI AND ACID GLYCERINE OF PEPSINE over every other Pepsine or preparation of Pepsine—ENGLISH, FRENCH, GERMAN, OR AMERICAN.

**** *In prescribing either of the above preparations, it is suggested to insert in parenthesis as follows* (BULLOCK).

J. L. BULLOCK & CO., 3, Hanover Street, Hanover Square, London, W.

TAMAR INDIEN CRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE,
CEREBRAL CONGESTION, HEADACHE,
LOSS OF APPETITE,
INTESTINAL OBSTRUCTIONS, &c.,

By augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent Physicians of Paris, notably Drs. BELIN an TARDIEU, who prescribe it constantly for the above complaints and with most mark success.

Wholesale—London: E. GRILLON, 69, Queen Street, Cheapside.

Sold by all Chemists and Druggists, 2s. 6d. a box stamp included.

MANUFACTURING PHARMACEUTICAL CHEMISTS, WHOLESALE AND EXPORT DRUGGISTS,

MANCHESTER.

GILSON'S CREAM OF COD-LIVER OIL.

IN trying a new preparation many practitioners experience some diffidence, hence the advantage gained by testing its efficacy is delayed.

This preparation, which we venture to hope may be at least accorded a trial by the medical profession, is obtained by an entirely new process in the production of Cod-liver Oil, which reduces it to a cream, without in the slightest degree altering its therapeutic value or effect.

It is not an emulsion, but is entirely new, and bears no resemblance to one or any other preparation of this oil, except in its external appearance; it is tasteless, except for a delicate and very pleasant flavour added to it to please the palate, while the flavour of Cod-liver Oil is **absolutely nil**, although it contains over **70** and nearly **80** per cent. It has a pleasing and inviting smell.

The oil globules being not merely broken up but entirely dissolved (this can be verified by microscopic examination), it is in the highest degree assimilable, consequently it does not "repeat" or "nauseate," while it will keep, even in an open vessel, for any length of time.

It is not combined with Phosphates, the Hypophosphites, or any other additions; and does not therefore interfere in any way with the prescribing of physicians, leaving them to add any prescription in conjunction they may think fit.

It is in fact Cod-liver Oil pure and simple, produced in a cream-like really pleasant form, instead of the oily unpalatable one.

In practice its effects will be found more than equal to those of the crude oil, while it has the *additional advantage* of being really pleasant to taste and smell.

GILSON'S CREAM OF COD-LIVER OIL. In bottles, 2s. 9d. and 4s. 6d., obtainable at all Chemists.

Samples free from the Sole Proprietors and Manufacturers,

GILSON & CO., 28, Milkwood-road, Herne-hill, London, S.E.

N.B.—As we are desirous of putting forward the merits of this preparation without any exaggeration, and in terms of the strictest possible accuracy, we do not state that it will revolutionise the system of administering the crude oil, or that it leaves all other preparations toiling laboriously in its wake; but we earnestly desire to draw attention to the following claims to consideration:—

That this is really a pleasant and entirely palatable preparation. That it does not "repeat" or "nauseate" (except in extremely rare cases) on account of the oil globules being dissolved, and not merely broken up, as in the case with the emulsions. That it contains nearer 75 than 70 per cent. of Cod-liver, which has seldom if ever been attained before. That it is permanent, does not separate, and will keep, even in an open vessel, for any length of time. All these statements we will guarantee to be correct.

MALTO-PEPSYN.

TO THE MEDICAL PROFESSION ONLY.

The remarkable endorsement of the leading Physicians of the Dominion of Canada, a part of which is published below, proves conclusively the good quality and remarkable efficacy of the formula.

The Proprietor, Hazen Morse, pledges himself to advertise only in Medical Journals, and not in the secular press. These two facts, together with the very low price of Malto-pepsyn (2s. 9d. per bottle, containing one ounce, with dose measure attached), should appeal at once to THE PROFESSION, and meet their universal support.

Malto-pepsyn supplies a want long felt, namely, a PERFECT DIGESTIVE, RELIABLE, of the SAME STRENGTH, and sold at a reasonable price.

Copy of original signatures in possession of the Proprietor, who will be happy to submit them to any Physician upon personal application.

We, the undersigned, Physicians of the Dominion of Canada,

Knowing the unreliability and poor quality of many of the numerous Pepsine Compounds now in the market, after thoroughly testing the following formula:—

Saccharated Pepsine	10 Grains.
,, Pancreatine	5 ,,
Acid Lacto-phosphate of Lime	5 ,,
Exsiccated Extract of Malt equal to one teaspoonful of Liquid Extract of Malt	10 ,,

introduced here by Hazen Morse, under the distinctive title of Malto-pepsyn, do cordially recommend it to our Medical brethren in all cases where the use of such a remedy is indicated, as we believe it to be one of the best, if not the best, remedy we have ever prescribed when artificial aid is required for digestion.

JAS. H. RICHARDSON, M.D., University of Toronto, M.R.C.S. England; Prof. of Anatomy, Toronto School of Medicine; Consulting Surgeon, Toronto General Hospital.
J.H. McCALLUM, M.D.
J. ALGERNON TEMPLE, M.D., M.R.C.S. England, F.C.S. London, Eng.; Prof. Midwifery, Trinity School of Medicine.
F. C. M. GRASETT, M.B., C.M. Edinburgh University, F.R.C.S. England; Lecturer, Medical Jurisprudence, Trinity School of Medicine
JOHN E. KENNEDY, B.A., M.D., Prof. of Materia Medica, Trinity Medical School; F.C.S. London.
J. H. BURNS, M.B., Member of Medical Council.
J. FULTON, M.D., M.R.C.S., L.R.C.P. London; Editor of Canada LANCET; Prof. of Surgery at Trinity School of Medicine.
H. E. BUCHAN, M.D., L.R.C.P. Edinburgh, L.F.P.S. Glasgow; Member of Medical Council.
J. E. GRAHAM, M.D., University of Toronto. L.R.C.P. London Lecturer, Institutes of Medicine, Toronto School of Medicine; Prof. of Dermatology.
ARTHUR JUKES JOHNSON, M.D., M.R.C.S. England.
O. S. WINSTANLEY, M.D., M.R.C.S. England.
CHAS. WM. COVERNTON, M.D., M.R.C.S. England; Ex-President, College of Physicians and Surgeons, Ontario, Canada; Lecturer Sanitary Science, Trinity School of Medicine.
JAMES ROSS, M.D., Jefferson College, Philadelphia.
JAMES F. W. ROSS, M.B., L.R.C.P. London, Eng.
M. H. AIKINS, M.D., M.R.C.S. England, Lecturer Surgical Anatomy, Toronto School of Medicine.

N.B.—It has been found that a free acid, like Hydrochloric, does not combine well with a Saccharated Mixture, and renders it liable to decomposition, I therefore do not use it in my formula. It can be easily prescribed in solution (say, 20 drops of acid to 4 ounces of water), one half ounce with each dose, in cases where its use is indicated.

Sole Proprietor, HAZEN MORSE, ONTARIO, CANADA.

For full particulars, Sample Bottle free, Pamphlet, &c., please address

BURGOYNE, BURBIDGES, & CO., 16, Coleman Street, London, E.C.

ALETRIS CORDIAL

Uterine Tonic and Restorative.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhœa, Dysmenorrhœa, Leucorrhœa, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, &c.
DOSE.—One teaspoonful three or four times a day.

UNRIVALLED AS A UTERINE TONIC IN IRREGULAR, PAINFUL, SUPPRESSED, AND EXCESSIVE MENSTRUATION.

It restores normal action to the uterus, and imparts vigour to the entire uterine system.

☞ Where women have aborted during previous pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation. Price per bottle, 4s. 6d. Sold by all Chemists.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS
A NON-ALCOHOLIC LIQUID.

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhœa, Dysentery, Night-Sweats, Hæmorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhœa, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhœa, Gleet, &c.

Recommended by Dr. J. MARION SIMS and other prominent Physicians. Price per bottle, 7s. Sold by all chemists.

SYR. HYPOPHOS. CO. (LORIMER'S.)

EACH TEASPOONFUL (ONE FLUID DRACHM) CONTAINS:

Lime Hypophosphite	2 grains	Iron Hypophosphite	¼ grain
Sodium „	1½ „	Manganese „	¼ „
Potassium „	1 „	Quinine „	¼ „
Strychnia, ⅛th grain.			

Half & 1lb., Stamped, 24s. and 42s.; Unstamped, 21s. & 36s. doz. In Bulk for Dispensing, 2s. 6d. lb.

The Manufacturers claim for Lorimer's "Syr. Hypophosph. Co.":—

1st. That the *formula* is *original*. There is no other preparation of the Hypophosphites which contains the same proportions, or so large proportions of the various salts.

2nd. The formula is *definite and unvarying, and being stated on every label, is non-secret*. Hence the Practitioner knows what he is handling, can vary the dose according to the requirements of the case, and is not encouraging the trade in *secret* or *quack* nostrums.

3rd. It is pleasant to take.

4th. The *Strychnia* and other active ingredients are held permanently in solution; it does not precipitate, become cloudy, flocculent, or unsightly.

5th. It contains no free acid, but is neutral, or very slightly alkaline, and will not disagree with the most sensitive stomach.

6th. The price is not a fancy one.

7th. Lorimer's Hypophosphites are superior in chemical and therapeutical value to all other similar preparations; and *free trial samples are supplied to Members of the Medical Profession* on application, in order to enable them to judge as to the fairness of this claim.

IMPORTANT EVIDENCE.

THE ORIGINALS OF THESE LETTERS MAY BE SEEN BY ANY MEMBER OF THE MEDICAL PROFESSION.

MESSRS. LORIMER & CO.

DEAR SIRS,

Your Syrup of the Hypophosphites has proved of such *inestimable value* in my own case that I can hardly say too much in its favour as a remedial agent.

For five weeks I laboured under great nervous prostration, and was in a semi-anæmic condition, with debility of the digestive organs, and such torpor of the bowels as necessitated the constant use of aperient medicine (a very unusual want with me), which I aided by the Infusions of Columba, Gentian, &c., accompanied by preparations of Iron, with very little benefit, till I happened to see the formula of your Syrup in looking over the *British Medical Journal*.

The action of your preparation has been *all but magical*: by the time I had taken five doses, the obstinate constipation was relieved, my appetite returned, and I felt stronger than I had done for many months previously. I am happy to say these good results have proved to be permanent.

Yours faithfully,

A PHYSICIAN.

Birmingham, June 30th, 1885.

Dewsbury, April 25th, 1886.

An invaluable remedy in pulmonary tuberculosis. The patients like it, finding it an agreeable stimulant and tonic, and quickly improving the appetite. I shall in future use it more extensively. M.D.

Kirkburton, Yorkshire, April 21st, 1886.

Your Syrup of Hypophosphites is an elegant preparation, which is something, and a very effective one, which is everything. I have used it in a number of cases with much success, and shall use no other in future. M.D.

Kidderminster, March 23rd, 1886.

LORIMER'S HYPOPHOSPHITES.—I have given your Syrup Hypophosph. Co. in several cases, and always with marked benefit. I consider it an elegant compound, and superior to all others.

HONORARY SURGEON, Kidderminster Infirmary.

Clifton, July 20th, 1886.

I prefer it to any other. It appears to meet the desideratum long sought for—viz., an elegant preparation, definite and stated formula, and moderate price. M.D.

LORIMER'S OTHER LEADING SPECIALITIES.

BROMO CAFFEINE (effervescent) for headache, &c. 1 grain hydrobromate Caffeine in each teaspoonful. lb. 5s.; 3s. bottles, 24s. dozen.

COCA WINE. Imp. pints, stamped, 32s.; unstamped, 29s. dozen.

COCAINE LOZENGES. 1-10th gr. in each, oz., 6d., decorated tin boxes, 9s. dozen.

EXTRACT OF WITCH HAZEL. lb. 2s. 6d. In bottles, 12s. and 30s. dozen.

Distilled from the bark of the *Hamamelis Virginica*, and used in the treatment of cuts, bruises, inflammations, all irritated surfaces, and internal and external hæmorrhages. *It is identical with certain much* advertised *nostrums* under various fanciful names.

CENTRAL DEPOT,

SAVORY & MOORE'S
PANCREATIC EMULSION,
OR PANCREATISED (PREDIGESTED) FAT,
LARGELY PRESCRIBED AS AN ARTICLE OF DIET
IN ALL CASES OF
CONSUMPTION, WASTING, LOSS OF APPETITE, STRENGTH, and DIGESTIVE POWER.

The special advantage of Pancreatic Emulsion is that it provides the NATURAL STABLE SOLID FATS OF FOOD, predigested by the action of the pancreatic secretion, so that they can be taken without the least disturbance of the digestive functions. As it provides SOLID fat, it is well to make it alternate with a liquid fat, like cod-liver oil, even where the latter agrees, and in many cases where cod-liver oil disagrees it may be permanently substituted with the greatest advantage, or it may be taken WITH the oil, the assimilation of which it actively promotes.

The Emulsion is of the consistence of Devonshire cream, easily miscible with fluids, and quite unobjectionable in taste. It may be given in milk or water, and with the addition of a little wine or brandy if desired.

In Bottles, 2s. 6d., 4s. 6d., and 8s.

SAVORY & MOORE, 143, NEW BOND STREET, W.

HORSFORD'S ACID PHOSPHATE,
(LIQUID.)

Prepared according to the directions of Prof. E. N. HORSFORD, of Cambridge, Mass., U.S.A.

FORMULA:—Its analysis shows that each fluid drachm contains 5 1-2 grains free Phosphoric Acid (P_2O_5), and nearly 5 grains Phosphate of Lime, Magnesia, Iron, and Potash.

Horsford's Acid Phosphate has been in use by the medical fraternity of the United States and elsewhere for several years, with the most satisfactory results, in

Dyspepsia, Indigestion, Mental and Physical Exhaustion, Insomnia, Nervousness, Diminished Vitality, &c.

It is a colourless liquid, acid to the taste, and contains no pyro-phosphate or meta-phosphate of any base whatever.

Among the numerous forms of phosphorus in combination, Horsford's Acid Phosphate seems best adapted for use as a medicinal remedy.

Especially serviceable as a menstruum for the administration of such alkaloids as strychnia, morphia, quinia, and other organic bases which are usually exhibited in acid combination.

It makes a refreshing and nutritious drink in fevers, and with water and sugar a delicious beverage.

Cable Address—"RUMFORD, PROVIDENCE." RUMFORD CHEMICAL WORKS—Providence, R.I., U.S.A.

FOR SALE BY

CORBYN, STACEY, & CO., and Branches, 7, Poultry, E.C., 86, New Bond-street, W.,	300, High Holborn, London. 153, Leadenhall-street, E.C., London.

THE GENERAL APOTHECARIES' COMPANY,

LIMITED,

WHOLESALE & EXPORT DRUGGISTS,

49, BERNERS STREET, LONDON, W.

CAPITAL — £30,000, in 6000 SHARES of £5 EACH.

This Company has now been in active operation for more than **Thirty Years.** It was established to supply the Medical Profession and Public Institutions with Drugs, Chemicals, and Pharmaceutical Preparations, &c., at the lowest prices compatible with maintaining the highest standard of quality, and to this principle it has always steadily adhered.

The **Paid-up Capital** amounts to **£23,468** (of which **£5000** is **Preferential,** bearing a dividend of **8 per cent.**). This is held by upwards of 600 Shareholders, nearly all of whom are members of the Profession.

FINANCIAL POSITION.

From the last Report and Balance Sheet it appears that on the 31st December, 1885, the Company was in a position to discharge the whole of its **Trade Liabilities** from Cash then in hand or immediately available, leaving a balance of about £2000 in Government Securities, and the whole of its property invested in Debts, Stock, Plant, Machinery, Leases, &c., entirely intact.

TERMS:—NON-SHAREHOLDERS.

THREE MONTHS' CURRENT ACCOUNT.—Statements delivered quarterly.

DISCOUNTS.

Cash or Quarterly Accounts, if settled within **One Month** after delivery, **5 per cent.** If paid **subsequently** to that date, but **before** the next Quarter Day, **2½ per cent.** If longer Credit is taken **No Discount** can be allowed.

CARRIAGE.

Carriage is Paid on Parcels of the value of **£2 and upwards** to any Railway Station in England and Wales.

RETURNS.

Returns (received in good condition and carriage paid) allowed in full.

SHAREHOLDERS.

In **addition** to the above **Discounts** and **Allowances,** Shareholders holding one or more Shares in the Company, and whose **Annual** dealings with it **Exceed £25** and **are under £100,** will be entitled to an **Extra Discount or Rebate of 5 per cent. on such Excess.** The **Rebate** will be **7½ per cent.** on the amount of business done **over and above £100.**

These allowances will be either carried to Credit at the Christmas Quarter, or remitted in Cash, as may be desired.

A copy of the Company's **Price List,** revised and amended in accordance with the last Edition of the "British Pharmacopœia" (1885), will be regularly posted to each customer.

A Form of Application for Shares, Price Lists, &c., forwarded to any Member of the Profession, on application to the Secretary,

49, BERNERS STREET, W. **F. MESSER.**

SYR. HYPOPHOS. CO., FELLOWS.

CONTAINS THE ESSENTIAL ELEMENTS to the Animal Organisation—Potash and Lime;

THE OXIDISING AGENTS—Iron and Manganese;

THE TONICS—Quinine and Strychnine;

AND THE VITALISING CONSTITUENTS—Phosphorus, combined in the form of Syrup with **SLIGHT ALKALINE REACTION**.

IT DIFFERS IN EFFECT FROM ALL OTHERS, being highly susceptible to oxidation during respiration, pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

IT HAS SUSTAINED A HIGH REPUTATION particularly in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs. Is employed also in various nervous and debilitating diseases with success.

ITS CURATIVE PROPERTIES are largely attributable to Stimulant, Tonic, and Nutritive Qualities, whereby the various organs are recruited.

ITS ACTION IS PROMPT. stimulating the appetite and the digestion; it promotes assimilation, and enters directly into the circulation with food products.

The prescribed dose produces a feeling of buoyancy, and removes depression and melancholy; hence it is of great value in the treatment of mental and nervous affections. From its exerting a double tonic effect, and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

NOTICE.—CAUTION.—The success of Fellows' Hypophosphites has prompted certain persons to utter substitutes. Mr. Fellows, having examined several of these, finds no two samples identical, and all differ from the veritable, in composition, in freedom from acid reaction, in susceptibility to the effects of oxygen when exposed to light or heat, in the property of retaining the strychnine in solution, and in the medicinal effects.

SPECIAL NOTICE.

Lest any Members of the Medical Profession may be misled by the many specious advertisements of imitators of Fellows' Syrup of Hypophosphites, Mr. Fellows begs to publish the following, viz.—

That he is the sole inventor of the formula of Fellows' Compound Syrup of Hypophosphites, which was discovered and prepared for the first time for his own use in 1865, when out of health;

That the testimonials bear date from the year 1868;

That the genuineness of the early testimonials was certified by Aaron Alward, Esq., M.D., Mayor of the City of St. John, Province of New Brunswick, Canada, and the great seal attached on 6th February, 1868; and

That the formula of the Syrup has never since been changed.

Mr. Fellows therefore refers to the printed form surrounding every bottle, where the letters may be found in detail.

As cheap substitutes are frequently dispensed instead of the genuine, Mr. Fellows can only advise that his Syrup should be prescribed in the original bottles, 4s. or 7s., where the distinguishing marks will prevent imposition.

BENGER'S PREPARATIONS OF THE NATURAL DIGESTIVE FERMENTS.

GOLD MEDAL—International Health Exhibition, London.

"Mr. Benger's admirable preparations."—THE LANCET, March 25th, 1882.

"Deserving of the highest praise, and only require to be made known to the profession to ensure their extensive employment."—THE PRACTITIONER, Feb. 1883.

1. LIQUOR PANCREATICUS (BENGER).

(REGISTERED.)

An extract in which the digestive principles (proteolytic and amylolitic) of the pancreas exist in a state of great activity. It is used chiefly for preparation of peptonised or partially digested foods, such as milk, soups, beef-tea, &c., the administration of which has been attended with such great success in the treatment of various diseases. *Simple directions for preparing these accompany each bottle, and no special apparatus is required.* In 4, 8, and 16 oz. bottles.

"It is of this preparation that I must be understood to speak in what I have now to say on the production of artificially digested food."—Lumleian Lectures, by Sir WM. ROBERTS, M.D., F.R.S.

BENGER'S PEPTONISING POWDERS. *Pulvis Pancreaticus Alkalinus (Benger).* Colourless, odourless, soluble. One will peptonise a pint of milk, gruel, &c., in fifteen minutes. In boxes containing 12 powders.

2. LIQUOR PEPTICUS (BENGER).

AN EXCEEDINGLY ACTIVE FLUID PEPSINE. Dose: One or two teaspoonfuls in a wineglass of water, wine, or weak spirit and water, with meals. It is without disagreeable taste, and, being used to assist the natural digestive powers of the stomach, is best taken during the meal.

"Those of you who from past experience have lost faith in Pepsine may be encouraged to try again the more active preparations which are now within our reach. The Liquor Pepticus prepared by Mr. Benger is a digestive agent of extraordinary power."—Sir WM. ROBERTS, M.D., F.R.S., at the Northwich Meeting of the British Medical Association.

In 4, 8, and 16 oz. bottles.

PEPSIN (BENGER). In tasteless coated pills. Dose, one with each meal. Convenient where great portability is essential. In bottles containing 25, 50, and 100 pills.

3. BENGER'S PEPTONISED BEEF JELLY.

A DELICATELY FLAVOURED, CONCENTRATED, PARTIALLY DIGESTED, AND SOLIDIFIED BEEF-TEA, containing, besides the Salts and flavouring principles, much of the *fibrin* or *flesh-forming* elements of the beef in a soluble form, fit for immediate absorption. On this account it constitutes an exceedingly valuable and delicious quick restorative. It can be taken by teaspoonfuls, cold as a jelly, or dissolved in a little hot water, as a concentrated beef-tea. It is also used to fortify or enrich ordinary beef-tea, soups, &c. It affords to invalids, when travelling, a ready and convenient form of concentrated nutriment.

"It is a most valuable form of concentrated food."—THE LANCET, March 25th, 1882.

"We have found it invaluable for old people whose digestive powers are feeble, and also in convalescence from acute disease."—LONDON MEDICAL RECORD, March 15th, 1882.

Tins, which are sealed, and will keep in any climate, 2s. each.

4. BENGER'S FOOD (For CHILDREN, INVALIDS, and those of weak digestion.)

(PANCREATISED FARINACEOUS.)

NOTICE TO THE MEDICAL PROFESSION.—BENGER'S FOOD consists of a specially finely ground Hungarian wheaten flour, cooked, slightly alkalised, and impregnated with a suitable proportion of the natural digestive principles of the pancreas. When this Food is mixed with warm milk, or milk and water, as directed on each tin, the pancreatic enzymes become active; the casein of the milk is so modified thereby that firm indigestible curds cannot be formed in the stomach, and the farinaceous elements of the food are rendered soluble; hence, it will be found that BENGER'S FOOD can be enjoyed and assimilated when all other foods disagree. It forms a delicate and highly nutritious cream, entirely free from rough and indigestible particles, such as often produce irritation in delicate stomachs.—(See Medical Reports with each tin.)

THE LONDON MEDICAL RECORD, March 15th, 1882, says:—*"Undoubtedly a great advance on any previous attempt in this direction. It is palatable and excellent in every way. We have given it in very many cases with the most marked benefit, patients frequently retaining it after every other food had been rejected. For children who throw up their food in curdled masses it is invaluable."* Tins, 1s. 6d., 2s. 6d., and 5s. each.

N.B.—To guard against Imitations, Physicians should specify BENGER'S PREPARATIONS. above may be obtained through all leading Wholesale and Retail Houses at home and abroad, or they can be forwarded direct from the Manufacturers by Parcel Post.

BURROUGHS, WELLCOME & CO.'S PAGE.

[Fresh and Original Matter on this page every week.]

Burroughs, Wellcome & Co. claim the sole responsibility for everything that appears on this page.

It is not the design of this series to instruct or deal with open questions, but simply to note those facts which bear directly upon the practical application of recent developments in pharmacy.

Gastro-Intestinal Diseases.

CLINICAL REPORTS OF TREATMENT WITH FAIRCHILD'S PEPTONISING POWDERS.

"If a child is so weak and exhausted that it will not digest the mildest form of food prepared, and it is impossible to obtain breast milk—for this should be our first thought—it is useless to weaken the condensed milk, or whatever we use, to such a degree as to make it absolutely valueless as a nutriment. . . . . In such cases, and they are frequent in the summer months, the preparation of milk which has undergone partial digestion with Fairchild's Peptonising Powders I have found most useful."—*Excerpt from a clinical lecture by Dr. J. M. Keating.*

In Sir William Roberts' work on "Digestive Ferments" it is written:—"If we could change the casein of milk into peptone, *without materially altering the flavour and appearance of the milk*, [italics ours] such a result would go far towards solving the problem of supplying an artificially digested food for the use of the sick." It was with the definite object of preparing a Peptonising Powder that would uniformly afford a peptonised milk as sweet and assimilable as mothers' milk, that the scientific chemist, Mr. Fairchild, set out. The very general use of the Fairchild Peptonising Powders bespeaks how thoroughly he accomplished his task. These Peptonising Powders have now been used for some time by the profession, and with results that seem almost unparalleled in brilliancy. The following very interesting clinical reports, penned by painstaking parents, cannot do otherwise than further substantiate the usefulness of Fairchild's discovery.

CASE I.—The first is from Mr. H. Sadd, of New Jersey:—"I think it proper," he says, "that I should add my testimony regarding the value of Fairchild's 'Peptonising Powders'—in preparing food for infants, for the effect my experience might have in inducing others to try the preparation in a like emergency.

"From the time of his birth I was unable to find any food which suited my baby, and at the age of seven weeks he was taken sick with cholera infantum. His surroundings and the general care he had received were good, and the disease was directly caused by inappropriate food.

"In four days from the time the disease was noticed he was reduced to a skeleton, and was not expected to live from hour to hour. During that time a number of expedients were resorted to to provide him nourishment, but without success—cows' and goats' milk, and the different prepared foods, being rejected immediately.

"While life was at this low ebb, he was for three days kept alive by slight portions of [illegible] Food and brandy, but no progress towards recovery was noticeable until the eighth day of his illness, when the freshly peptonized milk was first used.

"A tablespoonful was given at intervals of two hours, and was retained in every instance. There was an improvement noticeable at once, and in twenty-four hours it was apparent that we had finally found a food adapted to him. The quantity given was increased gradually, until at the end of a week a full quantity was prepared each morning and night.

"During the week the baby gained one and a half pounds. Later double the quantity of peptonised milk was prepared morning and night, and its use was continued until he was seven months old. His gain in weight during the time was regular, and averaged two-thirds of a pound a week.

"I have gone to this length for the reason previously stated, and with the hope that the details of my experience with Fairchild's Peptonising Powders may induce others to give them a trial, thereby possibly saving some infant life."

CASE II.—The second report we would cite is from the well known Dr. J. L. Ludlow of Philadelphia, and nothing could be more convincing; he says of Fairchild's Peptonising Powder,—"Its value has come home to me in my own family. I believe the life of one of my little ones was saved by it."

CASE III.—The third report is from Mr. George Swift, of Melbourne, and is as conclusive as the preceding. Mr. Swift writes:—

"When about fourteen weeks had elapsed after my wife was confined, the natural milk supply began to fail, and by the end of the fourth month had entirely ceased. We had recourse to the usual substitute, cows' milk, which was attended with very indifferent success, from the little one's being unable to digest the excess of casein. The result was *diarrhœa and gradual wasting away.* Just at this time I took up the pamphlet on Fairchild's Peptonising Powders, made myself thoroughly master of its contents, and at once put into operation the instructions given for peptonising milk. I am happy to inform you that *the result was most surprising. In less than 24 hours our little one showed marked symptoms of improvement*, the stools becoming less frequent and watery, and containing fewer undigested lumps of casein; and so gradually improving that *at the end of the third day every bad symptom had disappeared*, and to day as I write, now a fortnight since commencing the use of the peptonised milk, she is as healthy as any parent could wish—a living monument to its use."

Diarrhœal Diseases.

THEIR PREVENTION AND CURE.

INFANT MORTALITY.

"It may be asked whether the practical results of peptonising the casein of cows' milk are as beneficial in early infancy as the theory would indicate. As far as tried, the question can be answered in the affirmative."—NEW YORK MEDICAL RECORD.

After referring to Zymine, and the pancreatic method of pre-digestion, the BRITISH MEDICAL JOURNAL says:—"Its introduction has probably done more than any other measure of recent times to lessen infant mortality."

There is nothing physicians who have many children under their care dread more than the summer months. A great deal has been written about the dangers of the "second summer," but of course the second summer differs not from any other summer. It is well known that at certain periods of life certain diseases are most apt to appear. Diarrhœa is the scourge of infant life, and milk peptonised with Fairchild's Peptonising Powders is the best preventive.

STARTLING STATISTICS.

The disease of all diseases to carry off young infants is summer diarrhœa. In a prominent treatise on diseases of children, a record is given of the monthly deaths from diarrhœa and dysentery, in Philadelphia, during a period of seven years, and this record shows that just about two-thirds of the mortality of each year was in the months of July and August. In London and New York from 1-10th to 1-8th of all the deaths of the entire population is from diarrhœal diseases in children under five years of age; "in one town in New England the mortality reached nearly 15 per cent., and in one Southern city nearly 18 per cent." (Yale).

Of over 2000 cases of diarrhœa that came under the notice of Dr. West at the Children's Infirmary, "exactly half occurred in children between the ages of six months and two years," and during eight years in the same institution, from May to October inclusive of each year, diarrhœa formed 38·3 per cent. of all diseases. Of 14,773 deaths among children in New York, 13,000 were from diarrhœa in those under 5 years of age.

"In one of the three foundling hospitals of France, that at Rheims, the stay of the infant does not exceed a few days; but neither while there, nor afterwards when at nurse in the country, is it brought up at the breast. The mortality under one year of the children admitted reached 63·9 per cent. (authority of M. Villermé). At X———, where none of the children are suckled, but all are fed, of 224 new-born infants, 197 (or 80 per cent.) had died by the end of the first year" (West).

ARTIFICIAL FEEDING.

"Before the Foundling Asylum was established, the foundlings of New York, more than a thousand annually, were placed in the almshouse on Blackwell's Island, in charge of the pauper women. . . . To each of these women one or two foundlings were assigned, and they were expected to feed them with the milk and coarse bread of the almshouse made into pap. These waifs all died within three months." The writer of these words, Dr. Louis Smith, says that in one institution, "a ward is set aside for such infants as are from necessity deprived of breast milk, and it goes by the name of *the ward of the dying babies.*"

Dr. Thorpe, of Liverpool, states that of 634 deaths from infantile diarrhœa, only 28 were fed on mothers' milk.

A SURE PREVENTIVE.

With a due appreciation of all these facts, and after the most crucial tests by the greatest living authorities on Diseases of Children, we have introduced a preparation, Zymine (Extractum Pancreatis), Fairchild, of which Dr. Geo. Harley years ago affirmed, that if ever such a one were produced it would be the greatest boon ever conferred upon suffering humanity. At the Philadelphia Sanitary Convention in June, in an able article on "Artificial Feeding," Dr. Keating maintained that cows' milk, properly prepared, is *the next best thing to mothers' milk.* The council at Salsburg asserted the same.

The following from a leader in the NEW YORK MEDICAL RECORD on "Improvement n Infant Diet" is to the point:—"We have seen that cows' milk is the best substitute for human milk, but that the former is apt to disagree with the infant. . . . . Let ordinary pure cows' milk be diluted with water that has previously been boiled to destroy all germs, until its percentage of albuminoids has been reduced to the proper amount. Next add to it enough cream to make up the fat, and some sugar of milk. Then peptonise it with reliable extract of the pancreas [Fairchild's Peptonising Powders] for the alteration of casein, and there is produced the best physiological imitation of mothers' milk."

Milk peptonised with Fairchild Peptonising Powders* is used in the largest hospitals in the world, and has been the means of saving untold numbers of infant lives.

Dr. Ludlow says:—"I believe the life of one of my little ones was saved by it," and Dr. Keating says:—"I feel satisfied that the question of infant feeding is solved."

DIRECTIONS FOR PEPTONISING MILK.

FOR INFANTS UNDER SIX MONTHS.

Pour one Fairchild Peptonising Powder into the nursing bottle with ¼-pint of water and ¼-pint of milk; keep warm for 20 minutes before administration; sweeten a little.

FOR INFANTS OVER SIX MONTHS.

Add one-half Fairchild Peptonising Powder to ¼-pint of water, and half again or twice as much milk; keep warm for 20 minutes before feeding. It is then ready for use.

Pure milk sugar, Kepler Extract of Malt, or even loaf sugar may be added to the milk if deemed expedient; also a little fresh cream.

NOTE.—When not for immediate use, the peptonised milk should either be kept on ice or boiled for two or three minutes to prevent over-peptonisation.

When the age is reached at which farinaceous food is thought desirable, peptonised milk gruel may be given. It is prepared by having a teaspoonful of good wheat flour or other flour boiled with the water before adding to the milk.

BURROUGHS, WELLCOME & Co.

A COMPLETE LIST OF

Burroughs, Wellcome & Co.'s New Preparations.

ANTIPYRIN TABLOIDS.
The new Antipyretic (a chinolin derivative).

EUCALYPTINE (BURROUGHS).
Powerfully antiseptic. For Strains, Sprains, Bruises, Scalds, Lameness, etc.

ZYMINE (EXTRACTUM PANCREATIS), FAIRCHILD.
For predigesting foods of all kinds, for Invalids and Infants.

ZYMINE TABLOIDS.
Prescribed in Intestinal Dyspepsia.

COMPOUND ZYMINE TABLOIDS.
Prescribed in Bilious Dyspepsia.

PEPSIN IN SCALES (FAIRCHILD).
One grain digests 1,000 grains of egg albumen.

PEPSIN TABLOIDS.
For Gastric Dyspepsia. Children like them as sweets.

PEPTONISING POWDERS (FAIRCHILD).
One of these predigests a pint of milk in a few minutes.

ARTIFICIAL SPONGES AND WOUND PADS.
Antiseptic or plain. One of them will absorb fifteen times its weight of water or blood.

TEST TABLETS.
For freshly preparing Fehling's Solution.

PURE TEREBENE (BURROUGHS).
The new remedy for Winter Cough and Flatulence.

TRYPSIN (FAIRCHILD).
For dissolving away the membrane in Diphtheria. A pancreatic digestive ferment.

CODMAN AND SHURTLEFF'S STEAM ATOMIZER.
The steam may be medicated as desired.

URETHANE TABLOIDS.
The new Hypnotic. (A salt of Carabamic Acid).

TRINITRINE TABLOIDS.
Discovered by Dr. Murrell to relieve Angina Pectoris.

TRINITRINE COMP. TABLOIDS.
(Nitro-Glycerine, Nitrite of Amyl, Capsicum, Menthol.)
Prescribed for fatty heart, and at the onset of an epileptic aura, but especially for angina pectoris.

STROPHANTHUS.
A cardiac tonic; it does not constringe the arterioles.

VALOIDS.
Equivalent fluid extracts of definite strength, for the immediate preparation of Tinctures, Syrups, Infusions, etc.

HYPODERMIC TABLOIDS.
The LANCET :—"They are very soluble and not at all irritating"

HAZELINE.
Anodyne, Sedative, Antiseptic, Hæmostatic, and Tonic.

BURROUGHS CHLORIDE OF AMMONIA INHALER.
VEREKER'S PATENT.
"It is the best I have used, and I think I have tried all."
—R. FRANKS, Dublin University.

MEDICAL POCKET CASES.
The best, most convenient, durable and economical.

COMPLETE HYPODERMIC POCKET CASES.
For Syringe, Needles, Tubes of Hypodermic Tabloids, etc.

VAGINAL TAMPONS.
Antiseptic. As recommended by Dr. FANCOURT BARNES.

ELIXOIDS.
They effectually disguise every unpleasant quality, and are most elegant and palatable preparations.

BURROUGHS, WELLCOME & CO., Manufacturing Chemists, Snow Hill Buildings, E.C.

THE

KEPLER SOLUTION

OF

Cod Liver Oil in Extract of Malt.

The most powerful Fattening, "Tissue-Forming," "Force-Producing" Digestive Food ever produced.

"This is not an *Emulsion;* its constituents are in a condition of more intimate admixture, namely, that of *Solution.*"—E. GODWIN CLAYTON, F.C.S.

"An ideal form for administration of fat."—BRITISH MEDICAL JOURNAL.

"The taste of the oil is agreeably disguised, the nutritive powers are greatly increased, and it is rendered easy of digestion."—IBID.

"It has hardly any of the disagreeable repeats of the oil. Many could take it easily who could not take the oil."—The LANCET.

"Its superiority as a therapeutical agent, especially in cases of wasting diseases, is obvious."—IBID.

"It is the most palatable and easily digested of any form of cod liver oil."—The MEDICAL TIMES AND GAZETTE.

VOICE "TABLOIDS."

(COCAINE, CHLORATE OF POTASH AND BORAX.)

Cocaine relieves irritation and dryness of the throat, restores the tonicity of the vocal chords, and effects a grateful secretion.

TRADE "TABLETS." MARK.

COMPRESSED CHLORATE OF POTASH.

BEAUTIFUL LENTICULAR DISCS.

(Prepared by the "WYETH" Process.)

"Chlorate of Potash exercises great influence on mucous membranes."

"Infinitely superior to lozenges."—DR. LENNOX BROWN.

COMPRESSED CHLORATE OF POTASH AND BORAX.

The Borax enhances the action of Chlorate of Potash. It relieves hoarseness, irritation of the throat and bronchi, and is a preventive of diseases of the nares, throat and larynx. Purifies the breath.

PRATT & CO.'S STAY FOR ANGULAR CURVATURE, FOR ADULTS AND CHILDREN.

These Stays have been found very serviceable, and are made at prices which bring them within the reach of the poorer classes; the prices range from 21s. to £3 13s. 6d.

The principle of these Stays is based upon Dr. Taylor's American Support, but with elastic steel springs instead of rigid bars, fitting accurately to the back, along the transverse processes, and, when drawn by the straps over the shoulders, keeping up a gentle pressure, and has been found to be exceedingly valuable in a large number of cases.

In all cases of Spinal Deformity it would be more satisfactory to the surgeon and patient if the patient could attend personally, as so much depends on the accurate fitting and adaptation of each instrument.

PRATT & CO., 43, OXFORD ST.

ARTIFICIAL LEGS, of New Improved Construction, for Amputation above and below knee, £15; extra quality. £21.
WOODEN LEGS, £1, £1 10s., £2 2s.
ARTIFICIAL ARMS, with Articulated Thumb, £3 10s

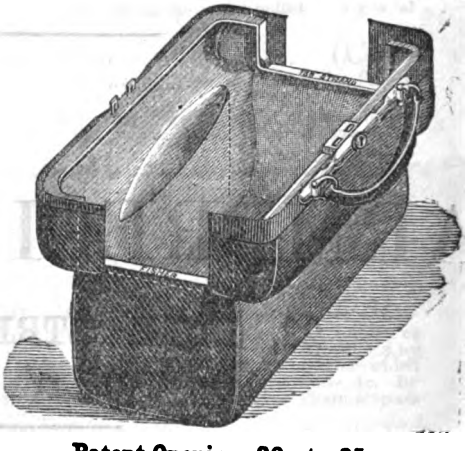
UNIVERSAL TUBULAR WATER AND AIR BED

Prize Medals Sanitary Congress, 1878; Industrial Exhibition York, 1879; Certificate of Honour Sanitary Congress, 1879.

Brighton, 1881. International, 1881 Kensington, 1882.

POCOCK BROTHERS,
Patentees and Sole Manufacturers,
235, SOUTHWARK BRIDGE ROAD, LONDON.

Consists of a series of separate and distinct cylinders, any diameter and suitable length, made of Waterproof material either for Water or Air, fitting into a case which keeps them side by side, but slightly apart.



1. In cost it is less expensive.
2. It is warm and light, and well adapted for a camp or field-bed, being waterproof.
3. It is quickly filled and easily adjusted.
4. It admits of ventilation in the space between the tubes.
5. It can be regulated so as to relieve pressure from any part required.
6. By the addition of tubes it will raise one part of the body higher than the rest.
7. By the temporary removal of one or two tubes it affords room for the introduction of a bed-pan.
8. It can be inclined to any angle (even when filled with water) to suit the condition of the patient.
9. It is free from noise and surging, so disagreeable to the invalid on changing his position on a water-bed.
10. In case of injury to a tube it can be withdrawn, and a fresh one substituted at a trifling cost, and without loss of time; whereas the ordinary water-bed if injured in any part (from being in one compartment) is rendered useless.
11. In the treatment of invalids, especially the insane, who are paralysed, and have no control over their evacuations, they cannot lie in a pool of wet, the fluid passing away between the tubes.

ITS ADVANTAGES OVER ORDINARY WATER OR AIR BEDS ARE AS ABOVE.

FISHER'S DOCTORS' BAGS.

Bags made to order on the premises in a few hours. The largest stock of bags in London.

Ordinary Shape, from 6s. 6d. to 50s. *Catalogues Post Free.* **Patent Opening, 30s. to £5.**

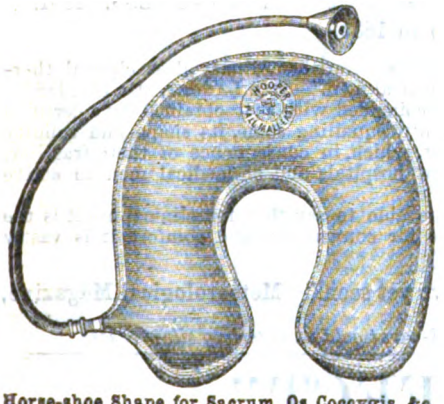
HOOPER'S ELASTIC WATER OR AIR BEDS AND CUSHIONS.

To be used on any ordinary Bedstead or Couch.



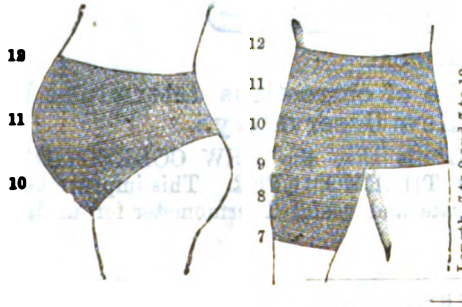
For Paralysis, Fevers, Consumption, Rheumatic Affections.

For Sale or on Hire.

For Bedsores, Spinal Affections, and all Bedridden Patients.

☞ Messrs. Hooper & Compy. beg to invite the attention of the Profession to their system of hiring their Water Beds otherwise than in contagious or infectious diseases, and feel assured that where outlay is a consideration the Profession will appreciate and avail themselves of this hiring system.

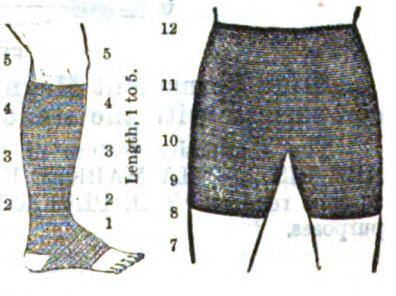
Horse-shoe Shape for Sacrum, Os Coccygis, &c. This form of cushion also facilitates the use of the Bed Slipper or Urinal.



Elastic Hot-Water Bottles for feet, stomach, chest, &c.

Round, with open centre to relieve Bedsores or Pressure on Hip, Buttock, &c.; also for sitting on.

HOOPER'S SPIRAL ELASTIC BANDAGES.



POROUS—ALLOWING FREE VENTILATION.

The measure should be taken next the skin, as follows:—

1. Round thickest part of instep.
2. Round ankle-bone.
3. Round small of leg.
4. Round thickest part of calf.
5. Round leg, just below knee.
6. Round knee-cap.
7. Round leg, just above knee.
8. Round middle of thigh.
9. Round top of thigh.
10. Round body at hips.
11. Round body at umbilicus.
12. Round waist.

The Length should also be given.

An experienced Female always in attendance.

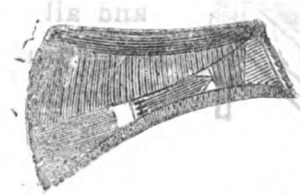
NEW AURAL RESERVOIR.

Price 4s.] Suggested by M. J. MOLONY, L.R.C.P., L.R.C.S. [Price 4s.

Extract from THE LANCET, April 3rd, 1886:—"The advantages of the 'Aural Reservoir' are—1. It enables one to syringe an ear without the aid of an assistant. 2. It effectually prevents the least drop of water from trickling over the patient's neck. 3. It is simple, unbreakable, and cannot get out of order. It is made of tin, bronzed, and enamelled, and comes up to the usual artistic finish of Messrs. Arnold's work."



ARNOLD & SONS,

Instrument Makers by Appointment to Her Majesty's Government, the Honourable Council of India, the Admiralty, St. Bartholomew's Hospital, and the principal Provincial and Colonial Hospitals.

35, 36, and 37, WEST SMITHFIELD, LONDON, E.C.

Salmon's Abdominal Belt,

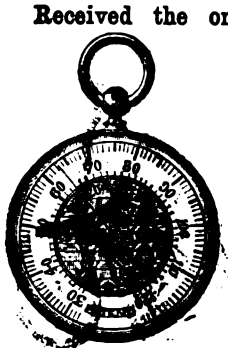
in Silk Elastic, and Thread do., from 26s. to 50s.

The Belt is light in texture, and affords a more lifting support than any hitherto made, completely supporting the lower part of the Abdomen. It is recommended in cases of Obesity, Tumour, Prolapsus Uteri, and during and after Pregnancy.

HENRY R. SALMON,
87, Wimpole-st., Cavendish-square, London, W. (corner of Wigmore-st.)

Salmon's Obstetric Binder,

for immediate use after delivery, 6s. 6d.; by post 6s. 10d.



The Binder is a substitute for the towel generally used immediately after labour. It is made of strong linen, and dispenses with the usual pinning. The advantages of the Binder are facility of application, combined with comfort and greater efficiency. Measurement required, ordinary size of the waist.
Each one stamped with name and address

87, Wimpole-street, Cavendish-square, London, W. (corner of Wigmore-st.).

IMMISCH'S PATENT METALLIC THERMOMETERS.

Received the only FIRST-CLASS AWARD for Thermometers, MEDICAL CONGRESS, 1881.
Awarded THREE SILVER MEDALS in 1885.

EXACT SIZE.

PRESS OPINIONS.—"It is equally sensitive and accurate as ordinary glass clinical thermometers, and offers several practical advantages to medical men."—THE LANCET, Dec. 5th, 1885.

"Tested in the axilla in the usual way, the result coincided with that obtained by a certified thermometer of the ordinary kind, its sensitiveness fully equalling same, its shape and solidity offering distinct advantages over the bulb instrument, which, in consequence of their fragility, constitute a notable item in the instruments bills of hospitals and of medical men in active practice."—BRITISH MEDICAL JOURNAL, Dec. 12th, 1885.

"From a trial extending over several months we are able to say that for clinical use it is the equal of the best constructed glass instrument, while for convenience and comfort it is vastly superior."—MEDICAL PRESS, April 28th, 1886.

"The smallest accurate thermometer we have yet seen."—Meteorological Magazine, Sept. 1885.

To be obtained of all instrument makers in 18-carat gold and sterling silver cases.

"FERRIS' PERFECT"
CLINICAL THERMOMETER.

(Registered under the Trade Marks Act.)

FERRIS & CO.'S "PERFECT" CLINICAL.

With Permanent Magnified Index, and certificate of corrections determined by comparison with the standard instruments at the Kew Observatory.

The Distinctive feature of "THE PERFECT CLINICAL" is that the KEW CORRECTIONS ARE DISTINCTLY MARKED UPON THE STEM OF EVERY THERMOMETER. This improvement at once renders "THE PERFECT CLINICAL" the most accurate and useful Thermometer for medical purposes.

Price 10s. 6d. each.

The KREOCHYLE CO., 9, Farringdon-road, London, E.C.

TO BE OBTAINED BY ORDER OF ALL CHEMISTS.

"Containing all the elements necessary for the sustenance and growth of the human frame."

MARSHALLS' PREPARATIONS OF WHEAT

Are "The FINEST of the WHEAT."

They have been recognised by the medical profession as reliable foods of a simple nourishing and palatable character. They are greatly superior to arrowroot, corn flour, &c., for use in the nursery and sick room, for, while they contain a abundance of nutriment quite independently of the milk used in cooking them, they are delicate in flavour and readily assimilated even by the feeblest digestion. They are pure products from a variety of wheat that is exceptionally rich in albuminoids, and are the results of mechanical processes only. They are also very moderate in price.

MARSHALLS' FAROLA

is an exquisite food, highly refined. Analysis shows no trace remaining of woody fibre or impurities of an irritating nature. It is superior to the finest arrowroot.

MARSHALLS' SEMOLINA

is the best part of the wheat grain in a free granular state. It has no equal as a substance for porridge and puddings. It is a perfect family food.

MARSHALLS' GRANOLA

is a hygienic wheaten food. It consists of the whole pure contents of the grain, in a free granular state, with the exception of the germ. This, by special appliances, is removed entire, and thus prevented from yielding its essential oils. These, when liberated, rapidly become rancid, and if in contact with the farinaceous parts, would impart to them their bitter flavour, and also induce decay. Granola, invaluable to the sedentary, produces a healthy regularity of digestive action, while it is palatable and nourishing.

"Prepared from the genuine wheat—contains good proportion of the most important constituent of wheat, albuminoids."—BRIT. MED. JOUR.

"We have given it a prolonged trial, and find it a most satisfactory food for children and invalids. SEMOLINA as prepared by Messrs. MARSHALL is an economical, palatable, and nutritious article of diet."—MEDICAL TIMES AND GAZETTE.

"We are satisfied that it is a product of wheaten grain. It is fresh, a great advantage, as its sweetness and flavour are thereby improved."—PROVINCIAL MEDICAL JOURNAL.

"We believe it to be a wholesome, palatable, and cheap food. We can certify that it is pleasant, and easily digested."—GLASGOW MEDICAL JOURNAL.

The following Report is by the eminent Analytical Chemist, A. Wynter Blyth, M.R.C.S.

Analysis of a sample of FAROLA received from Messrs. James & Thomas Marshall, Glasgow, Feb. 22nd, 1886:—

	Per cent.
Hygroscopic moisture	13·60
Fatty matters...	·86
Albuminoids	7·27
Soluble in cold water	·70
Insoluble in cold water	6·57
Carbohydrates	78·27
	100·00

FAROLA is in the form of a fine granular powder, and is soluble in cold water to the extent of ·7 per cent. A microscopical examination shows that it is made of perfectly pure materials, and that the statements of the manufacturers are correct as to its preparation and properties.

(Signed) A. WYNTER BLYTH.

Court House, St. Marylebone, March 3rd, 1886.

Professor Ferguson, Chair of Chemistry, reports:—
University of Glasgow, July 11th, 1885.

The following is the Analysis of a sample of SEMOLINA sent me by Mr. James Marshall, Ibrox Flour Mills:—

Water	13·80
Oil	1·65
Albuminous compounds	14·96
Gum, starch, sugar	69·17
Fibre	Trace.
Ash	0·40
	100·00

Nitrogen, 2·39; Phosphoric Acid, 0·20.

This substance is pure and carefully prepared from Wheat of the best quality. It is rich in the constituents necessary to form a nutritious food, and it is very palatable and readily digested. It can be strongly recommended as an excellent article of diet.

(Signed) JOHN FERGUSON.

I have tried the SEMOLINA, and the last part of the Report is from personal experience. (Signed) J. P.

"MARSHALLS' SEMOLINA is very well made—absolutely free from adulteration—a highly valuable food."—THE LANCET.

Each packet contains the net weight marked thereon, irrespective of wrappings and bears our registered trade mark and signature.

JAMES & THOMAS MARSHALL, Ibrox Flour Mills, Glasgow.

Samples and Descriptive Pamphlet, with full Tables of Analyses, post-free on application.

SCHWEITZER'S COCOATINA.

REGISTERED.

Anti-dyspeptic Cocoa or Chocolate Powder.

GUARANTEED PURE SOLUBLE COCOA of the finest quality, without Sugar or admixture.

The high degree of Solubility and perfect Purity attained *is solely* due to the careful manipulation and delicate MECHANICAL treatment of the finest quality of Cocoa Beans, with the *excess* of fat extracted.

Four times the strength of Cocoas *thickened* yet *weakened* with starch, &c., and in reality cheaper than such mixtures.

In air-tight tins, at 1s. 6d., 3s., 5s. 6d., &c., by Chemists, Grocers, &c.

Adopted as a "Medical comfort" in the Hospitals and Ships of H.M. Royal Navy.

Sole Proprietors, H. SCHWEITZER & CO., 10, Adam-street, Adelphi, London, W.C.

ARTIFICIAL HUMAN MILK.

Prepared at the suggestion of an eminent Physician, who in writing to the "British Medical Journal," May 21st, 1881, says:—"I should like to direct the attention of practitioners to the ARTIFICIAL HUMAN MILK now prepared by the AYLESBURY DAIRY COMPANY at a cost a little over that of the best nursery milk."

Unsolicited Testimonials from eminent Members of the Medical Profession:—

"The infant, my nephew, has now (8.30 P.M.) had it in all four times. He has hardly cried at all, and has slept very well. I felt sure your ARTIFICIAL HUMAN MILK would suit him, but was hardly prepared for so IMMEDIATE and MARKED AN IMPROVEMENT. Previously he had been given Nestlé's food (not by me), cow's milk, and two kinds of condensed milk, but with each of these he had constant craving, frequent attacks of pain, and restlessness and flatulence, &c."

"The ARTIFICIAL HUMAN MILK you began to supply me with three weeks ago has been the MEANS, humanly speaking, of SAVING MY CHILD'S LIFE. All wet-nurses had failed, and nothing could be found to agree until I tried this. The child gained ten ounces in the first six days, and has continued to improve in strength and weight ever since."

"I may say that your ARTIFICIAL HUMAN MILK has agreed BEYOND EXPECTATION and where ALL OTHERS HAVE BEEN TOTALLY USELESS and UNDIGESTED. I am very pleased with it, and one of my boys, who was brought up as an infant entirely on it, is a LIVING WITNESS of its EMINENT SUITABILITY as a diet for infants."

PREPARED ONLY BY

THE AYLESBURY DAIRY COMPANY, Limited, 31, St. Petersburgh-place, Bayswater, London, W.

S. N. STOUT.

In Casks, 12/6 per 9 gals. In Bottle, 3/3 per doz. Impl. Pts.*

* Bottles, corks or stoppered, charged 1/6 per doz., stoppers 1/- per doz. extra, and allowed for at the same rates if returned; but bottles and stoppers must be paid for with the Beer.

Neither sugar, saccharum, nor any of the many new Brewing Materials are used in the manufacture of the "S.N." Stout; it is Brewed entirely from the finest Malt and Hops; it is, too, more hopped than Stout is generally; therefore, besides being very nutritious, it is an excellent Tonic and particularly suited for invalids, ladies nursing, or anyone requiring a good strengthening beverage. It is a "Sound Nutritious" Tonic, and very much recommended by Medical men.

Charing-Cross Hospital Medical School.

SESSION 1886-87.

The SESSION will commence on Friday, October 1st.

The Hospital contains 180 beds, making, with the 50 beds of the adjoining Royal Westminster Ophthalmic Hospital, to the practice of which general Students are admitted, a total of 230 beds available for Clinical teaching.

MEDICAL AND SURGICAL STAFF.

Consulting Physicians—Sir Joseph Fayrer, M.D., K.C.S.I., F.R.S.; Sir Guyer Hunter, M.D., K.C.M.G., M.P.
Consulting Surgeon—Francis Hird, F.R.C.S.
Physicians—A. J. Pollock, M.D., F.R.C.P.; T. Henry Green, M.D., F.R.C.P.; J. Mitchell Bruce, M.A., M.D., F.R.C.P.
Assistant-Physicians—J. Abercrombie, B.A., M.D., F.R.C.P.; M. Lubbock, M.D.; F. Willcocks, M.D.; H. M. Murray, M.D.
Physician-Accoucheur—J. Watt Black, M.A., M.D., F.R.C.P.
Assistant Physician-Accoucheur—Amand Routh, B.S., M.D.
Physician for Skin Diseases—A. Sangster, B.A., M.B., F.R.C.P.
Medical Registrar—H. M. Murray, M.D.
Surgeons—R. Barwell, F.R.C.S.; E. Bellamy, F.R.C.S.; J. Astley Bloxam, F.R.C.S.
Assistant-Surgeons—James Cantlie, M.A., M.B., F.R.C.S.; J. H. Morgan, M.A., F.R.C.S.; Stanley Boyd, B.S., M.B., F.R.C.S.
Dental Surgeon—John Fairbank, M.R.C.S.
Chloroformists—F. Woodhouse Braine, F.R.C.S.; F. Hewitt, M.D., M.R.C.S.
Surgical Registrar—W. J. Roeckel, M.B., B.S., F.R.C.S.

The Charing-cross Hospital occupies a position in the very centre of London, which is highly advantageous for the study of every variety of disease and injury. The Physicians and Surgeons give Clinical Instruction in the wards and out-patient rooms daily, and deliver Clinical Lectures regularly. Every student is required to serve as Clerk and Dresser under the direction of the staff. There are special departments for Diseases of Women and Midwifery, Diseases of Children, of the Skin, the Ear, and the Teeth; while the students are admitted free to the practice of the Royal Westminster Ophthalmic Hospital. Systematic courses of Practical Medicine and Surgery are now established.

LECTURES AND DEMONSTRATORS.

Anatomy—E. Bellamy, F.R.C.S.
Physiology, Theoretical and Practical—F. W. Mott, M.B.
Medicine—Dr. Pollock, F.R.C.P.
Surgery—R. Barwell, F.R.C.S.
Chemistry—C. W. Heaton, F.I.C., F.C.S.
Dissections—Jas. Cantlie, M.A., M.B., F.R.C.S.
Therapeutics—Dr. J. Mitchell Bruce, M.A., F.R.C.P.
Midwifery—Dr. Black, M.A., F.R.C.P.
Forensic Medicine: (*a*) Medical Jurisprudence—Dr. Abercrombie, B.A.; (*b*) Toxicology—Mr. Heaton, F.I.C., F.C.S.
Pathology—Dr. Green, F.R.C.P.
Materia Medica and Botany—Dr. Willcocks.
Practical Chemistry—Mr. Heaton, F.I.C., F.C.S., and Demonstrators.
Comparative Anatomy—Dr. Garson.
Hygiene and Public Health—Mr. Heaton, F.I.C., F.C.S.
Dental Surgery—John Fairbank, M.R.C.S.
Clinical Medicine—Dr. Pollock, Dr. Green, and Dr. Bruce.
Clinical Surgery—Mr. Barwell, Mr. Bellamy, and Mr. Bloxam.
Aural Surgery—Mr. Cantlie.
Practical Surgery: (*a*) Operations and Minor Surgery—Mr. Bloxam; (*b*) Surgical Pathology—Mr. Morgan.
Practical Medicine—Dr. Willcocks and Dr. Murray.
Skin Diseases—Dr. Sangster.

The Dissecting Room, Physiological Laboratory, and Chemical Laboratories are open daily from nine till four. In each department the students receive individual instruction from the lecturer, demonstrators, and assistant demonstrators, both practically and on a tutorial system. Written examinations are held regularly throughout the sessions. The students enjoy the advantages of the Museum, Library, and Reading Room.

UNIVERSITY OF LONDON.

Instruction for the Preliminary Scientific (M.B.) Examination of the University of London. See separate advertisement.

SCHOLARSHIPS, MEDALS, AND PRIZES.

Two Entrance Scholarships, of the value of £30 and £20 respectively, are awarded in October. The Golding Scholarship of £15 is awarded to first-year's Students.

The Llewellyn Scholarship of £25 to second-year's Students. The Governors' Gold Medal for Clinical Medicine and Surgery to Senior Students. The Pereira Prize of £5 for the best Clinical Reports. Silver and Bronze Medals and Certificates of Honour are awarded in the various classes.

APPOINTMENTS OPEN TO STUDENTS.

Medical Registrar (salary £40 per annum); Surgical Registrar (salary £40 per annum); House-Surgeons (4), House-Physicians (4), Resident Obstetrical Officers (2), Assistant Prosectors of Anatomy, Demonstrators of Anatomy, Chemistry, and Physiology, Clinical Clerks, Surgeons' Dressers, Pathological, Electrical, and Midwifery Assistants, &c.

FEES.—For the curriculum of study required by the various Examining Bodies and hospital practice, 90 guineas in one sum, or 100 guineas in five instalments.

The composition fee for Dental Surgery is £42 2s., which can be paid in two instalments. Practical Instruction in Dental Surgery is given three times a week.

***** The hours of Lectures have been specially rearranged to suit the convenience of Dental Students. Charing-cross Hospital is within three minutes' walk of the Dental Hospital of London.**

Gentlemen can enter to any course of Lectures, or to Hospital Practice only; and such occasional Students are allowed to compete for prizes and hold appointments with certain reservations.

A Prospectus, containing much additional information, will be forwarded on application to the Librarian and Secretary, Mr. J. F. Pink, who attends daily at the Office of the School, Chandos-street, Charing-cross, between the hours of 10 and 4.

J. MITCHELL BRUCE, M.A., M.D., Dean.

HOSPITAL STAFF OF THE ROYAL WESTMINSTER OPHTHALMIC HOSPITAL,

To whose practice the general Students are admitted free:—

Surgeons—Henry Power, M.B., F.R.C.S.; James Rouse, F.R.C.S.; George Cowell, F.R.C.S.; Charles Macnamara, F.R.C.S.; H. Juler, F.R.C.S.; J. Frost, F.R.C.S.; G. Harridge, F.R.C.S.

The Royal Westminster Ophthalmic

HOSPITAL, King William-street, Charing-cross.

The Practice of this Hospital is open to Practitioners and Students from 1 to 4 P.M. daily.

Special Instruction is given in the Diagnosis, Pathology, and Treatment of all EYE AFFECTIONS, including the Operations on the Eye, the Treatment of Errors of Refraction, and the use of the Ophthalmoscope.

The next Clinical Evening, Friday, Oct. 8th, at 8 P.M.: Mr. Power and Mr. Juler.

Terms for six months, £3 3s. Perpetual, £5 5s.

For particulars apply to Mr. Juler, 77, Wimpole-street, W.

Westminster Hospital Medical School

(opposite Westminster Abbey). Founded 1834.

HOSPITAL STAFF.

Consulting Physicians—Dr. Radcliffe, Dr. Fincham.
Physicians—Dr. Sturges, Dr. Allchin, Dr. Donkin.
Assistant-Physicians—Dr. de Havilland Hall, Dr. Hughes Bennett, Dr. Murrell.
Consulting Surgeons—Mr. Barnard Holt, Mr. Holthouse.
Surgeons—Mr. Cowell, Mr. Richard Davy, Mr. Macnamara.
Assistant-Surgeons—Mr. Cooke, Mr. Bond.
Obstetric Physician—Dr. Potter.
Assistant Obstetric Physician—Dr. Grigg.
Dental Surgeons—Dr. Walker, Mr. Morton Smale.
Surgeon in Charge of the Eye Department—Mr. Cowell.
Surgeon in Charge of the Orthopædic Department—Mr. R. Davy.
Surgeon in Charge of the Aural Department—
Physician in Charge of the Skin Department—Dr. Calcott Fox.
Physician in Charge of the Throat Department—Dr. de Havilland Hall.

LECTURES, &c.

Medicine—Dr. Sturges, Dr. Allchin. Surgery—Mr. Cowell, Mr. Macnamara. Practical and Operative Surgery—Mr. Richard Davy, F.R.S.E. Anatomy—Mr. James Black. Dissections—Mr. Hebbert. Pathology—Dr. Allchin, F.R.S.E. Physiology and Histology, Normal and Morbid—Dr. Heneage Gibbes. Chemistry, Practical Chemistry and Toxicology—Dr. Dupré, F.R.S., Dr. H. Wilson Hake, F.C.S. Materia Medica and Therapeutics—Dr. Murrell. Midwifery—Dr. Potter. Forensic Medicine and Hygiene—Dr. H. de Havilland Hall. Psychology—Dr. Sutherland. Ophthalmic Surgery—Mr. Cowell. Orthopædic Surgery—Mr. R. Davy. Dental Surgery—Dr. Walker. Skin Diseases—Dr. Colcott Fox. Aural Surgery— —— . Comparative Anatomy—Dr. Leslie Ogilvie. Experimental Physics—Dr. George Ogilvie. Botany—Mr. Worsley Benison. Tutors—Dr. Hall, Dr. Syers.

The Winter Session will commence on October 4th with an Introductory Address, at 3.30 P.M., by Mr. James Black, after which the distribution of the prizes for the past year will take place.

Two Entrance Scholarships (October 1st and 2nd), value £80 and £40 respectively. Subjects: Latin, Mathematics, French or German, and Chemistry and Natural Philosophy. The Latin books the same as the June examinations of the University of London Matriculation (Livy, Book XXII.).

There are also the Treasurer's Prize, value £10 10s., for first year's subjects; the President's Prize in Anatomy and Physiology, value £21, for second year's men, given by His Grace the Duke of Westminster; Prizes for Clinical Medicine and Surgery, of £5 each; the Frederick Bird Medal and Prize, value £15; the Chadwick Prize for General Proficiency, value £21; and Special Class Prizes; numerous Dresserships and Clerkships; the posts of Pathologist and Curator, 50 guineas a year; Medical and Surgical Registrar, each with £40 a year; and of House-Physicians (2), House-Surgeons (2), and House-Surgeons' Resident Obstetric Assistant.

FEES.—In one payment £100; in two payments £105; or in five payments £115. There are no extras, except parts for dissection and the class of Experimental Physics. Fees for the shorter periods, or for single courses, may be learned on application to the Dean. Fees for Dental Students £50 in one sum, or 50 guineas in two payments.

Tutorial Classes to afford special preparation for the Examining Bodies are held four times a week.

New school buildings have been erected, affording most complete accommodation for 150 students. The rooms and theatres are large and well lighted, and fitted with the most modern improvements.

A Prospectus forwarded, and all particulars to be obtained, on application to

Westminster Hospital, S.W. F. DE HAVILLAND HALL, M.D., Dean.

St. Peter's Hospital for Stone, Stricture,

AND URINARY DISEASES.

Post-graduate courses (similar to those held in Berlin and Vienna) are held at regular intervals throughout the year for Theoretical and Clinical Instruction in the diagnosis and treatment of the Diseases of the Bladder and Urethra.—For particulars, apply to the Hon. Secretary of the Medical Committee, St. Peter's Hospital, Henrietta-street, Covent-garden, W.C.

St. Peter's Hospital for Stone and

URINARY DISEASES.

The Pathologist (Mr. E. Hurry Fenwicke) will present his Report to the Medical Committee in November, in the form of three Demonstrations. The material comprises specimens of various tumours of the bladder and prostate; strictures, stones, foreign bodies, tubercular and hydatid disease, perforations and ruptures, &c.

Association of Members of the Royal College of Surgeons (Eng.),

who have not as yet returned their copies of the "Petition to Her Majesty in Council," are begged to do so without delay, addressed to the Hon. Secs., 1, Florence-terrace, Ealing, W., previously obtaining as many signatures as possible. Those desirous of affording further support to the movement are also invited to join the Association by sending a subscription of 5s. for the current year.

By order,
WARWICK C. STEELE, WM. ASHTON ELLIS, } Hon. Secs.

King's College, London.

MEDICAL DEPARTMENT.

The WINTER SESSION will be opened on Friday, October 1st, at 4 P.M., when the Distribution of Prizes will take place, and an Address be given by Professor G. Johnson, M.D., F.R.S.

PROFESSORS.

Anatomy—Professor John Curnow, M.D., F.R.C.P.
Demonstrator—A. S. Kenny.
Physiology and Practical Physiology—Professor Gerald F. Yeo, M.D.
Demonstrators—J. W. Groves, F.C.S., T. W. Barrett, M.B., E. F. Herroun, and E. M. Crookshank, M.B.
Chemistry and Practical Chemistry—Professor C. L. Bloxam, F.C.S.
Demonstrators—J. M. Thomson, F.R.S.E., F.C.S., and G. S. Johnson.
Medicine (Principles and Practice of).—Professor L. S. Beale, M.B., F.R.S.
Surgery and Practical Surgery—Professor Henry Smith, F.R.C.S.
Demonstrators—W. Rose, B.S., M.B., F.R.C.S., W. W. Cheyne, F.R.C.S., C.M., A. B. Barrow, F.R.C.S., M.B.
Clinical Surgery—Professor Wood, F.R.S.; Professor Sir Joseph Lister, Bart., F.R.S.
Botany—Professor Bentley, F.L.S.
Materia Medica and Therapeutics—Professor N. I. C. Tirard, M.D.
Obstetric Medicine and the Diseases of Women and Children—Professor W. Playfair, M.D., F.R.C.P.
Forensic Medicine—Professor D. Ferrier, M.D., F.R.S.
Comparative Anatomy and Zoology—Professor F. Jeffrey Bell, M.A.
Pathological Anatomy—Professor A. B. Duffin, M.D., F.R.C.P.
Hygiene—Professor Charles Kelly, M.D., F.R.C.P.
Clinical Therapeutics—Professor Burney Yeo, M.D.
Dental Surgery—Professor S. Hamilton Cartwright, M.R.C.S.
Aural Surgery—U. Pritchard, M.D., F.R.S.
Ophthalmology—Prof. M. M. McHardy, F.R.C.S. Ed.
Psychological Medicine—Prof. Edgar Sheppard, M.D.
Dean of the Faculty—Professor Curnow, M.D.
Tutors—H. Jackson, E. F. Herroun, J. W. Groves.

PRELIMINARY SCIENTIFIC AND INTERMEDIATE SCIENCE EXAMINATIONS OF THE UNIVERSITY OF LONDON.

Special Courses of Lectures and Practical Instruction in the Chemical, Physical, and Physiological Laboratories have been arranged for Students preparing for these Examinations at the University of London.

KING'S COLLEGE HOSPITAL.

Clinical Lectures are given daily by the Physicians and Surgeons.
Clinical instruction is also given in Diseases of the Eye and Throat, in Skin Diseases, and in Diseases of the Ear.
Physicians—Dr. L. S. Beale, Dr. Duffin, Dr. Burney Yeo, Dr. Ferrier, Dr. Curnow.
Physicians for Diseases of Women and Children & Physician-Accoucheurs—Dr. W. Playfair, Dr. T. C. Haves.
Surgeons—John Wood, F.R.S.; Sir Joseph Lister, Bart., F.R.S.; H. Smith, F.R.C.S.; William Rose, F.R.C.S.
Assistant-Surgeons—W. W. Cheyne, F.R.C.S.; A. B. Barrow, F.R.C.S., M.B.
Assistant-Physicians—Dr. Tirard; Dr. N. Dalton.
Dental Surgeon—S. Hamilton Cartwright, M.R.C.S
Ophthalmic Surgeon—M. M. McHardy, F.R.C.S. Edin.
Aural Surgeon—Urban Pritchard, M.D., F.R.S.
Pathological Registrar—N. Dalton, M.D.
Chloroformist—Charles Moss, M.R.C.S.
Vaccinator—R. W. Dunn, M.R.C.S.

Dental, Aural, Skin, and Throat Departments, and Wards for Children and Ophthalmic Cases are attached to the Hospital.

The Physician's Assistant, Physician-Accoucheur's Assistant, and House-Surgeons, their Assistants, Clinical Clerks, and Dressers, are selected by examination from amongst the Students, without extra fees; the Resident Officers have rooms and commons free.

SCHOLARSHIPS, EXHIBITIONS, REGISTRARSHIPS, AND PRIZES.

WARNEFORD SCHOLARSHIPS.—Students entering the Medical Department of the College in October will have the exclusive privilege of contending for Two Scholarships of £75 each. These Scholarships are given for proficiency in Divinity, Classics, Mathematics, History, and English.

Five Medical Scholarships are awarded at the close of each Winter Session for proficiency in professional subjects—viz., one of £80, one of £30, and three of £20.

A Warneford Scholarship of £50 is also annually awarded for proficiency in Divinity, Medicine, Surgery, and Hospital Practice.

Sambrooke Registrarships: Two of £50, tenable for two years, are annually awarded to Matriculated Students of this department.

Sambrooke Exhibitions: Two annually, one of £60 and one of £40, are awarded for proficiency in Mathematics, Experimental Physics, Inorganic Chemistry, Botany, and Zoology.

Daniell Scholarship: One of £40, given for proficiency in Chemistry.

Rabbeth Scholarship: One of £20, given for early Scientific Training.

Science Exhibitions: Two annually, one of £100, and one of £50, given by the Clothworkers' Company.

Endowed Prizes of the value of £25, £15, £10, and £4 4s. each, and other College Prizes of the value of £60, are annually awarded.

For prospectuses or other information, apply, personally or by post-card, to J. W. Cunningham, Esq., Secretary, or to Professor Curnow, Dean of the Department.

Royal London Ophthalmic Hospital,

MOORFIELDS, E.C.

Gentlemen are admitted to the practice of this Hospital on application to the Secretary. Fee for Six Months, £3 3s.; perpetual £5 5s. The Hospital has 100 beds for in-patients, and the out-patients are yearly over 20,000. Operations daily from half-past ten o'clock to one o'clock P.M.

Students of the Hospital are eligible for the office of House-Surgeon, or may be appointed Clinical Assistants.

ROBERT J. NEWSTEAD, Secretary.

The London Hospital and Medical College.

HOSPITAL STAFF.

Consulting Physician—Dr. Ramskill.
Consulting Surgeons—Mr. Curling, F.R.S., Mr. Jonathan Hutchinson, F.R.S.
Physicians—Sir Andrew Clark, Bart., F.R.S.; Dr. Langdon Down, Dr. Hughlings Jackson, F.R.S., Dr. Sutton, Dr. Fenwick, Dr. Stephen Mackenzie, Dr. Sansom, Dr. Charlewood Turner, Dr. Gilbart Smith.
Assistant-Physicians—Dr. Warner, Dr. Ralfe.
Surgeons—Mr. Couper, Mr. Rivington, Mr. Waren Tay, Mr. McCarthy, Mr. Frederick Treves.
Assistant-Surgeons—Mr. Reeves, Mr. C. Mansell Moullin, Mr. Hurry Fenwick, Mr. F. S. Eve.
Obstetric Physician—Dr. Herman.
Assistant Obstetric Physician—Dr. Lewers.
Ophthalmic Surgeons—Mr. Waren Tay, Mr. F. S. Eve.
Physician to the Skin Department—Dr. Stephen Mackenzie.
Aural Surgeons—Dr. Edward Woakes, Mr. T. Mark Hovell.
Surgeon-Dentist—Mr. Barrett.

LECTURERS.

Medicine—Dr. Stephen Mackenzie.
Surgery—Mr. Rivington.
Operative Surgery—Mr. Rivington.
Practical Surgery—Mr. Reeves.
Anatomy—Mr. Fredk. Treves.
Practical Anatomy—Mr. Mansell Moullin.
Physiology and Practical Histology—Mr. McCarthy.
Chemistry—Dr. C. Meymott Tidy.
Chemical Physics—Mr. F. J. M. Page.
Comparative Anatomy—Mr. C. Mansell Moullin.
Pathology—Dr. Sutton.
Pathological Histology—Mr. Eve.
Midwifery—Dr. Herman.
Toxicology—Dr. C. Meymott Tidy.
Botany—Dr. F. Warner.
Medical Jurisprudence—Dr. Sansom.
Practical Chemistry—Mr. F. J. M. Page.
Materia Medica—Dr. Prosser James.
Diseases of the Eye—Mr. Waren Tay.
Diseases of the Ear—Dr. Edward Woakes.
Diseases of the Throat—Mr. T. Mark Hovell.
Anatomy and Pathology of the Teeth—Mr. Barrett.

As Emeritus Professor of Surgery, Mr. HUTCHINSON will give in the Winter and Summer Sessions short Courses of Lectures in Clinical Surgery, consisting of Six Lectures each. The Special Subjects and the dates will be announced in due course.

The SESSION 1886-87 will commence on Friday, October 1st, 1886; by that date the New College Buildings will be ready for occupation. The very extensive additions that have been made to the School Premises will afford complete provision for the teaching of all branches of Medical Science, the accommodation provided being more than double that which was provided in the Old Buildings. An inaugural ceremony will take place, of which due notice will be given.

Fee for Lectures and Hospital Practice, 90 guineas in one sum, or 100 guineas by three instalments.

The Hospital contains nearly 800 beds. Number of In-patients during 1885 was 8732; Out-patients 67,942.

The Resident and other Hospital Appointments are free to full Students. The Resident Appointments consist of five House-Physicianeies, five House-Surgeoncies, one Accoucheurship, and one Receiving-room Officer; four Dressers and four Maternity Assistants also reside in the hospital.

The holders of all the Resident Appointments are provided with rooms and board entirely free of expense.

Two Entrance Science Scholarships, value £60 and £40, and two Buxton Scholarships, value £30 and £20, will be offered for competition at the end of September to new Students.

The Letheby Prize, value £30, for proficiency in Chemistry.

A Scholarship, value £20, in Human Anatomy and Physiology, to first-year's Students.

A Scholarship, value £25, in Anatomy, Physiology, and Chemistry, to second-year's Students.

A Scholarship, value £20, in Clinical Medicine.
A Scholarship, value £20, in Clinical Surgery
A Scholarship, value £20, in Clinical Obstetrics.

A Duckworth Nelson Prize, value £10 (biennial), in Clinical Medicine and Surgery.

The Hutchinson Prize, value £35 (triennial), in Clinical Surgery.

Prizes, value £60, to Dressers of Out-patients in Minor Surgery.

Special Classes for the Preliminary Scientific and Intermediate M.B. Examinations of the University of London, and for the Primary and Pass Examinations for the Fellowship of the Royal College of Surgeons of England, are held throughout the year.

Special entries for Medical and Surgical Practice are made.

The London Hospital is now in direct communication by rail and tram with all parts of the metropolis, and the Metropolitan, Metropolitan District, East London, and South-Eastern Railways have stations within a minute's walk of the Hospital and College.

For prospectus and particulars apply, personally or by letter, to
Mile-end, E. MUNRO SCOTT, Warden.

The Middlesex Hospital Medical SCHOOL.

The WINTER SESSION, 1886-7, will open on Monday, October 4th, at 3 P.M., with an Introductory Address by Dr. C. Y. Biss, M.A. After the Lecture the Prizes awarded during the previous Winter and Summer Sessions will be distributed.

The ANNUAL DINNER of the past and present Students and their friends will take place the same evening at the Holborn Restaurant, at 6.30, Andrew Clark, Esq., in the Chair.

HOSPITAL STAFF.

Consulting Physicians—Dr. Henry Thompson, Dr. Goodfellow, Dr. Greenhow, F.R.S.
Physicians—Dr. Cayley, Dr. Coupland, Dr. Douglas Powell, Dr. David W. Finlay.
Assistant Physicians—Dr. J. K. Fowler, Dr. C. Y. Biss, Dr. J. J. Pringle.
Obstetric Physician—Dr. Arthur W. Edis.
Physician to Skin Department—Dr. Robert Liveing.
Assistant Obstetric Physician—Dr. W. A. Duncan.
Consulting Surgeons—Mr. Shaw, Mr. Nunn.
Surgeons—Mr. J. W. Hulke, F.R.S., Mr. George Lawson, Mr. Henry Morris.
Assistant Surgeons—Mr. Andrew Clark, Mr. A. Pearce Gould, Mr. J. Bland Sutton.
Ophthalmic Surgeon—Mr. William Lang.
Aural Surgeon—Mr. Arthur Hensman.
Consulting Surgeon-Dentists—Sir John Tomes, F.R.S., Mr. J. S. Turner.
Dental Surgeon—Mr. Storer Bennett.
Assistant Dental Surgeon—Mr. W. Hern.
Curator of Museum and Pathologist—Dr. J. K. Fowler.
Registrars—Dr. W. Pasteur and Mr. W. Roger Williams, F.R.C.S.
Chloroformists—Mr. G. Everitt Norton, Mr. H. Davis.
Resident Medical Officer—Mr. E. A. Farlon.

LECTURERS.

Principles and Practice of Medicine—Dr. Cayley.
Principles and Practice of Surgery—Mr. Morris, M.A., M.B.
Practical Medicine—Dr. Coupland, Dr. Douglas Powell.
Practical Surgery—Mr. Andrew Clark.
Physiology and General Anatomy—Mr. B. Thompson Lowne, F.L.S.
Descriptive and Surgical Anatomy—Mr. Arthur Hensman.
Chemistry and Practical Chemistry—Mr. W. Foster, M.A.Cantab.
Pathological Anatomy—Dr. J. K. Fowler, M.A.
Dissecting-room—Mr. Hensman, Mr. J. B. Sutton, Mr. W. E. Wynter, and Mr. C. G. Brodie.
Midwifery and Diseases of Women and Children—Dr. A. W. Edis.
Practical Midwifery—Dr. W. A. Duncan.
Materia Medica and Therapeutics—Dr. Thorowgood.
Forensic Medicine—Dr. D. W. Finlay, B.A.
Botany—Dr. Biss, M.A.Cantab.
Practical Physiology and Histology—Mr. B. Thompson Lowne, F.L.S.
Public Health—Dr. D. W. Finlay, B.A.
Psychological Medicine—Mr. Henry Case.
Comparative Anatomy and Zoology—Mr. J. B. Sutton.
Dermatology—Dr. Liveing, M.A.Cantab.
Clinical Lectures on Medicine—Dr. Cayley, Dr. Coupland, Dr. Douglas Powell, Dr. D. W. Finlay, B.A.
Clinical Lectures on Surgery—Mr. Hulke, F.R.S., Mr. George Lawson, Mr. Morris.
Clinical Lectures on Diseases of Women and Children—Dr. Arthur W. Edis.
Clinical Lectures on Diseases of the Eye—Mr. William Lang.
Practical Demonstrations on Diseases of the Throat and Ear—Mr. Hensman.

The Hospital contains 310 beds. There are special Departments for Cancer, Diseases of the Eye, Diseases of Women and Children, and Syphilis. In the new Out-patients Department, in addition to Medical and Surgical cases, special days are devoted to Diseases of Children, the Throat and Ear, the Skin, and Cases requiring Electrical Treatment.

There are fourteen Resident Clinical Appointments open to Students of the Hospital annually. Two Entrance Scholarships of the annual value of £50 and £30 respectively, each tenable for two years, are awarded at the commencement of the Winter Session. Two Broderip Scholarships, of the annual value of £20 and £20 respectively, each tenable for two years, are also awarded every year for proficiency in clinical knowledge. The Hetley Prize, value £25, is awarded annually for proficiency in Clinical Medicine, Surgery, and Obstetrics. The Murray Scholarship in connexion with the University of Aberdeen will be awarded in May, 1889. The Lyell Medal, value 5 guineas, is awarded annually to second-year Students. An Exhibition, value 10 guineas, is open to Students at the end of their first year.

The Governor's Prize of 20 guineas is annually given to the Student who, at the end of his third winter, shall pass the best Clinical Examination in the Out-patient Department. Class Prizes are also given.

Clerkships and Dresserships are awarded without fee, and the Clerk or Dresser of the week dines at the board-room table to have the opportunity of seeing accidents that may be admitted during the evening.

The Tutors assist all general Students, especially those preparing for their Examinations, and thus the necessity of obtaining private instruction is obviated.

Composition Fee £100, or by Instalments.

Several members of the staff receive Students as boarders. For particulars apply to the Dean.

Special arrangements are made for the convenience of Dental Students.

University of London. Preliminary Science Instruction. Arrangements have been made for Students desirous of undergoing a Course of Instruction in Science, such as that required for the Preliminary Scientific (M.B.) Examination of the University of London, to attend at the Normal School of Science, South Kensington.

For prospectus and further information, apply to the Dean, or the Resident Medical Officer at the Hospital.

A. PEARCE GOULD, Dean.

St. Thomas's Hospital Medical School,

Albert Embankment, London, S.E.—The WINTER SESSION of 1886-87 will commence on October 1st, when an Introductory Address will be delivered by J. S. Bristowe, M.D. Lond., F.R.S., LL.D., at 3 P.M.

Two Entrance Science Scholarships, of £100 and £60 respectively, open to all First-year Students, will be offered for competition. The Examination will be held on the 4th, 5th, and 6th of October, and the subjects will be Chemistry and Physics, with either Botany or Zoology, at the option of Candidates.

Special Classes are held throughout the year for the Preliminary Scientific and Intermediate M.B. Examinations of the University of London.

All Hospital Appointments are open to Students without extra charge.

Scholarships and Money Prizes of considerable value are awarded at the Sessional Examinations, as also several Medals.

The fees may be paid in one sum or by instalments. Entries may be made to Lectures or to Hospital Practice, and special arrangements are made for Students entering in their second or subsequent years; also for Dental Students and for Qualified Practitioners.

Several Medical Practitioners and Private Families residing in the neighbourhood receive Students for residence and supervision, and a register of approved lodgings is kept in the Secretary's office.

Prospectuses and all particulars may be obtained from the Medical Secretary, Mr. George Rendle.

W. M. ORD, Dean.

University College, London.

The SESSION of the FACULTY OF MEDICINE will commence on October 4th. Introductory Lecture at 4 P.M. by A. E. Barker, Esq.

PROFESSORS.

H. Charlton Bastian, M.A., M.D., F.R.S.—Pathological Anatomy and Clinical Medicine.
Marcus Beck, M.S., M.B.—Surgery and Clinical Surgery.
W. H. Corfield, M.A., M.D.—Hygiene and Public Health.
Wilson Fox, M.D., F.R.S.—Clinical Medicine (Holme Professorship).
Christopher Heath.—Clinical Surgery (Holme Professorship).
W. M. Grailly Hewitt, M.D.—Obstetric Medicine.
M. Berkeley Hill, M.B.—Clinical Surgery.
E. Ray Lankester, M.A., LL.D., F.R.S.—Zoology and Comparative Anatomy (Jodrell Professorship).
D. Oliver, F.R.S., F.L.S.—Botany.
G. Vivian Poore, M.D., B.S.—Medical Jurisprudence.
Sydney Ringer, M.D., F.R.S.—Medicine and Clinical Medicine.
F. T. Roberts, M.D., B.Sc.—Materia Medica and Therapeutics; Clinical Medicine.
E. A. Schäfer, F.R.S.—Physiology (Jodrell Professorship).
G. D. Thane—Anatomy.
John Tweedy—Ophthalmic Medicine and Surgery.
A. W. Williamson, Ph.D., LL.D., F.R.S.—Chemistry.

SCHOLARSHIPS, EXHIBITIONS, and PRIZES of the value of £300 are awarded annually; among these are included Three Entrance Exhibitions of the value of £100, £60, and £40 respectively, the examination for which commences on September 29th.

UNIVERSITY COLLEGE HOSPITAL.

CONSULTING PHYSICIANS.

Walter H. Walshe, M.D., F.R.C.P.
Sir William Jenner, Bart., K.C.B., M.D., F.R.C.P., F.R.S., LL.D., Physician to the Queen and to H.R.H. the Prince of Wales.
J. Russell Reynolds, M.D., F.R.C.P., F.R.S., Physician to the Queen's Household.

CONSULTING SURGEONS.

Mr. Richard Quain, F.R.S., Surgeon Extraordinary to the Queen.
Mr. J. Eric Erichsen, F.R.S., LL.D., Surgeon Extraordinary to the Queen.
Mr. John Marshall, F.R.S., LL.D.
Sir Henry Thompson, M.B., Surgeon Extraordinary to the King of the Belgians.
Mr. T. Wharton Jones, F.R.S., Ophthalmic.
Mr. G. A. Ibbetson, Dental.

PHYSICIANS.

Dr. Wilson Fox, Dr. Sydney Ringer, Dr. H. Charlton Bastian, Dr. Frederick T. Roberts, Dr. Gowers, Dr. G. V. Poore, and Dr. Thomas Barlow; Dr. Grailly Hewitt and Dr. John Williams, Obstetric Physicians; Dr. H. R. Crocker, Skin Department.

SURGEONS.

Mr. Berkeley Hill, M.B., Mr. Christopher Heath, Mr. Marcus Beck, M.S., M.B., Professors of Clinical Surgery; Mr. Arthur E. Barker and Mr. R. J. Godlee, M.S., B.A., M.B.
Mr. Victor Horsley, M.B., B.S., Assistant-Surgeon.
Mr. J. Tweedy, Ophthalmic Surgeon, Professor of Ophthalmic Medicine and Surgery.
Mr. S. J. Hutchinson, Dental Surgeon and Clinical Lecturer on Dental Surgery.
Anæsthetist, Dudley W. Buxton, M.D.
Resident Medical Officer, Dr. H. Maudsley. Surgical Registrar, Dr. Bilton Pollard, B.S.

The Hospital has special Obstetric, Ophthalmic, Skin, Throat, Aural, and Dental Departments. About 3000 in-patients and 30,000 out-patients are treated during the year. Thirty-six appointments, eighteen being resident, as House-Surgeon, House-Physician, Obstetric Assistant, &c., are filled up by competition during the year, and these, as well as all Clerkships and Dresserships, are open to Students of the Hospital without extra fee. Fees from 60 to 125 guineas, according to requirements.

Prospectuses, with full information as to classes, prizes, &c., may be obtained from the College, Gower-street, W.C.

G. V. POORE, M.D., B.S., Dean of the Faculty.
TALFOURD ELY, M.A., Secretary.

"SYSTEMA OMNIA VINCIT."

South London School of Pharmacy,

32), Kennington-road, S.E.

Director: Dr. JOHN MUTER, M.A., F.I.C., F.C.S., &c.
Established 1st October, 1868.
Eighteenth Session, 1885-6.

Private Instruction in Chemistry, Toxicology, &c., for Medical Gentlemen qualifying for the various University Examinations, Medical Officerships, or Sanitary Science, Cambridge, for long or short periods, at stated hours.

For fees, syllabus, &c., apply to

W. BAXTER, Secretary.

St. Mary's Hospital Medical School.—

The WINTER SESSION will open on October 1st with an Introductory Address by Mr. MALCOLM MORRIS.

The Annual Dinner of the Past and Present Students will take place the same evening. Mr. EDMUND OWEN in the chair.

ENTRANCE SCHOLARSHIPS.—The following will be offered for competition on September 30th and October 1st:—

ONE SCHOLARSHIP IN NATURAL SCIENCE of the value of 100 guineas, open to any gentleman who has not completed a Winter Session of Study at a Medical School.

THREE SCHOLARSHIPS IN NATURAL SCIENCE, each of the value of 50 guineas, under the same conditions.

ONE SCHOLARSHIP of the value of 100 guineas, open to Students from Epsom College, being sons of Medical Men, and who have not completed a Winter Session of Study at a Medical School.

TWO SCHOLARSHIPS, each of 50 guineas, open to Students from the Universities of Oxford, Cambridge, or other University, who have not entered at any London Medical School.

The Subjects of Examination for the Natural Science Scholarships will be Inorganic Chemistry, Experimental Physics, and Elementary Biology. The Examination will be conducted according to the Syllabus published in the London University Calendar of 1886, for the Preliminary Scientific M.B. Examination.

The Subjects of Examination for the two Scholarships open to Candidates from the Universities will be Chemistry (Organic and Inorganic), Physiology, and Histology.

In addition to the Open Entrance Scholarships, Class Prizes, and usual Appointments, Scholarships will be offered for competition at the end of each year, open to all pupils of the Hospital.

The Hospital contains 270 beds, is situated in one of the most pleasant districts of London, and is in direct communication by rail with all parts of the Metropolis.

The School buildings, to which large additions were made in 1883, especially as regards the laboratories for the teaching of Physiology and Chemistry, will be further enlarged this year, by the addition of a wing, containing a new Library, Pathological Laboratory, with arrangements for Bacteriological research, Materia Medica Museum, and various class-rooms for Anatomy, Physiology, and Chemistry. In the Students' Club a larger Dining Hall and Reading Room will be added. The building will be completed in time for the Winter Session.

HOSPITAL STAFF.

Consulting Physicians—Dr. T. K. Chambers, Dr. Handfield-Jones, F.R.S.
Consulting Surgeons—Mr. S. A. Lane, Mr. H. Spencer-Smith, Mr. James R. Lane, Mr. Walton.
Physicians—Sir Edward Sieveking, Dr. Broadbent, Dr. Cheadle.
Physicians in charge of Out-patients—Dr. Lees, Dr. S. Phillips, Dr. Maguire.
Surgeons—Mr. A. T. Norton, Mr. Edmund Owen, Mr. H. W. Page.
Surgeons in charge of Out-patients—Mr. W. Pye, Mr. A. J. Pepper, Mr. A. Q. Silcock.
Physician-Accoucheur—Dr. Alfred Meadows.
Physician-Accoucheur in charge of Out-patients—Dr. Montague Handfield-Jones.
Ophthalmic Surgeon—Mr. Critchett.
Junior Ophthalmic Surgeon—Mr. H. Juler.
Aural Surgeon—Mr. Field.
Surgeon in charge of the Department for Diseases of the Throat—Mr. Norton.
Surgeon in charge of the Department for Diseases of the Skin—Mr. Malcolm Morris.
Surgeon-Dentist—Mr. Howard Hayward.
Physician in charge of the Electrical Department—Dr. de Watteville.

OTHER LECTURERS.

Psychology—Sir J. Crichton Browne, F.R.S.
Physiology—Dr. Waller.
Chemistry—Dr. Alder Wright, F.R.S.
Medical Jurisprudence and Hygiene—Dr. Randall.
Botany—Rev. J. M. Crombie, M.A.
Comparative Anatomy—Mr. E. Poulton, M.A.

Special Classes are held for the Preliminary, Scientific, and Intermediate M.B. of the University of London, and for the F.R.C.S. Examinations.

All the Medical Appointments in Hospital, including the five House-Surgeoncies, are open to pupils without additional fee or expense of any kind.

For prospectus and further information, apply to

GEORGE P. FIELD, Dean.
SIDNEY PHILLIPS, M.D., Sub-Dean.

St. Mary's Hospital Residential College,

33, Westbourne-terrace, W.

Students may reside in the College under the supervision of the Warden, Dr. ROBERT MAGUIRE.

Terms, 90 guineas for the Academical year, including the assistance of the Demonstrators of the School on three evenings of the week.

Prospectus and Rules may be obtained from the Warden.

St. George's Hospital Medical School,

Hyde-park-corner, S.W.

The WINTER SESSION will Commence on Friday, October 1st, when an Introductory Address will be delivered by Dr. Waldham, at 4 P.M.

The following Entrance Scholarships will be offered for Competition in October.

1. A Scholarship, value £125, for the sons of medical men who have entered the school during the current year.

2. Two Scholarships, each of £50, open to all Students commencing their studies. The subjects for these three Scholarships will be Latin, French or German, and Elementary Physics, and the Examination wil be held on Monday, October 4th.

3. A Scholarship, value £90, open to all Students who have entered the school during the current year, and who have passed the Cambridge 1st M.B. since October, 1885. Subjects—Elementary Biology, Anatomy, Physiology, and Practical Chemistry.

4. A Scholarship, value £65, for students who have entered during the current year and have passed the Oxford 1st M.B. or the Cambridge 2nd M.B. Subjects—Anatomy and physiology. The examination for these scholarships will be held during the month of October.

The following Exhibitions and Prizes are also open to students:—The William Brown £100 Exhibition; the William Brown £40 Exhibition; the Brackenbury Prize in Medicine, value £32; the Brackenbury Prize in Surgery, value £32; the Pollock Prize in Physiology, value £18; the Johnson Prize in Anatomy, value £10 10s.; the Treasurer's Prize, value £10 10s.; General Proficiency Prizes for first, second, and third-year students, of £10 10s. each; the Brodie Prize in Surgery; the Acland Prize in Medicine; the Thompson Medal; and Sir Charles Clarke's Prize.

All hospital appointments, including the two House Physicianships and two House Surgeonships, are awarded as the result of competition, and are open to the students without additional expense of any kind.

Clerkships and dresserships, and all the minor appointments, are given without extra fees. Several paid appointments, including that of Obstetric Assistant, with a salary of £100 and board and lodging, are awarded yearly upon the recommendation of the Medical School Committee.

The new Physiological Laboratories and Class Rooms, now building, will be ready by October 1.

Prospectuses and fuller details may be obtained by application to

WILLIAM WADHAM, M.D., Dean.

St. Bartholomew's Hospital and

COLLEGE.

The WINTER SESSION will begin on Monday, October 4th, 1886.

Students can reside in the College within the Hospital walls, subject to the collegiate regulations. The Hospital comprises a service of 750 beds (including 75 for convalescents at Swanley). For further particulars, apply, personally or by letter, to the Warden of the College, St. Bartholomew's Hospital, E.C.

A handbook forwarded on application.

St. Bartholomew's Hospital and

COLLEGE.

CLASSES FOR THE UNIVERSITY OF LONDON MATRICULATION EXAMINATION.

Two Classes are held at St. Bartholomew's Hospital in each year for the convenience of gentlemen who are preparing for the Matriculation Examination at the University of London—from October to January, and from March to June. Fee for the Course of Three Months, £10 10s.

PRELIMINARY SCIENTIFIC EXAMINATION.

A Class (open to all Students, whether entered at the Hospital or not) is held from October 1st till July in preparation for the above examination as follows:—

Biology—T. W. Shore, M.D., B.Sc. Lond., Lecturer on Comparative Anatomy to the Hospital.
Physics and Chemistry—F. Womack, M.B., B.Sc. Lond., Demonstrator of Natural Philosophy and of Chemistry to the Hospital.

Fee, £12 12s.; to Students of the Hospital, £10 10s.

This Class is also suitable for Students entering for the Intermediate Science Examination and for the First M.B. of Cambridge.

Also a Special Class in preparation for the January Examination from September 1st till January. Fee, £10 10s.

For further particulars, apply to the Warden of the College, St. Bartholomew's Hospital, E.C.

A detailed Syllabus of the Classes forwarded on application.

St. Bartholomew's Hospital and

COLLEGE.

OPEN SCHOLARSHIPS IN SCIENCE.

Two Scholarships of the value of £130 each, tenable for one year, will be competed for on September 25th and following days. One of the value of £130 will be awarded to the best candidate at this examination under twenty years of age, if of sufficient merit. For the other, the candidates must be under twenty-five years of age.

The subjects of examination are Physics, Chemistry, Botany, Zoology, and Physiology. No candidate to take more than four subjects.

The Jeaffreson Exhibition will be competed for at the same time. The subjects of examination are Latin, Mathematics, and any two of the three following languages: Greek, French, and German.

The Classical subjects are those of the London University Matriculation Examination of July, 1886.

This is an open Exhibition of the value of £50.

Candidates must not have entered to the Medical or Surgical Practice of any Metropolitan Medical School.

The successful candidates will be required to enter at St. Bartholomew's Hospital in the October succeeding the Examination, and are eligible for the other Hospital Scholarships and Prizes.

For particulars, application may be made to the Warden of the College, at St. Bartholomew's Hospital, E.C.

Guy's Hospital.—The Medical Session

commences on Monday, October 4th.

MEDICAL OFFICERS.

Consulting Physicians—Sir W. Gull, Bart., M.D., D.C.L., F.R.S.; G. Owen Rees, M.D., F.R.S.; S. Wilks, M.D., LL.D., F.R.S.
Physicians—F. W. Pavy, M.D., F.R.S.; P. H. Pye-Smith, M.D., F.R.S.; Frederick Taylor, M.D.
Assistant Physicians—James F. Goodhart, M.D.; R. E. Carrington, M.D.; W. Hale White, M.D.
Consulting Surgeons—E. Cock, Esq.; J. Birkett, Esq.
Surgeons—Thomas Bryant, Esq.; Arthur E. Durham, Esq.; H. G. Howse, M.S.; N. Davies-Colley, M.C.
Assistant Surgeons—R. Clement Lucas, B.S.; C. H. Golding-Bird, M.B.; W. H. A. Jacobson, Esq.; C. J. Symonds, M.S.
Consulting Obstetric Physicians—Henry Oldham, M.D.; J. Braxton-Hicks, M.D., F.R.S.
Obstetric Physician—A. L. Galabin, M.D.
Assistant Obstetric Physician—P. Horrocks, M.D.
Consulting Ophthalmic Surgeon—C. Bader, Esq.
Ophthalmic Surgeon—C. Higgens, Esq.
Assistant Ophthalmic Surgeon—W. A. Brailey, M.D.
Aural Surgeon—W. Laidlaw Purves, Esq.
Dental Surgeon—H. Moon, Esq.
Assistant Dental Surgeon—F. Newland Pedley, Esq.
Other Lecturers and Demonstrators—H. Debus, F.R.S.; T. Stevenson, M.D.; C. E. Groves, F.R.S.; A. W. Reinold, F.R.S.; F. E. Beddard, M.A., F.R.S.E.; G. H. Savage, M.D.; G. Turner, Esq.; Tom Bird, Esq.; W. A. Lane, M.S.; J. Poland, Esq.; L. A. Dunn, M.B.

The Hospital contains, besides the beds for Medical and Surgical cases, wards for Obstetric, Ophthalmic, and other special departments.

In connexion with the Lying-in Charity, about 2500 cases are annually attended by the Students.

Number of patients relieved during the year, about 80,000.

Special Classes are held in the Hospital for Students preparing for the Examinations of the University of London and of other examining boards.

APPOINTMENTS.—The House-Surgeons and House-Physicians, the Obstetric Residents, Clinical Assistants, and Dressers are selected from the Students according to merit and without payment. There are also a large number of Junior Appointments, every part of the Hospital Practice being systematically employed for instruction.

ENTRANCE SCHOLARSHIPS.—Open Scholarship of 125 guineas in Classics, Mathematics, and Modern Languages. Open Scholarship of 126 guineas, in Chemistry, Physics, Botany, and Zoology.

PRIZES, &c.—Six Scholarships, varying in value from £10 to £50 each, for general proficiency in Medical Study; the Treasurer's Gold Medal in Medicine; the Treasurer's Gold Medal in Surgery; the Gurney Hoare Prize of £25 for Clinical Study; the Beaney Prize of 30 guineas for Pathology; the Sands Cox Scholarship of £15 per annum for three years, for Physiology; the Joseph Hoare Prizes of £25 and £10; the Michael Harris Prize of £10 for Anatomy; the Mackenzie Bacon Prize of £10 for Ophthalmoscopy.

For prospectus and further information apply to the Dean, Dr. F. Taylor.

Guy's Hospital, London, S.E., August, 1886.

The Dental Hospital of London Medical

SCHOOL, Leicester-square. — The WINTER SESSION will commence on Monday, October 4th.

LECTURES.

Mechanical Dentistry—Dr. Walker, M.R.C.S., L.D.S., on Wednesdays, at 5 P.M., commencing on October 6th.
Metallurgy in its Application to Dental Purposes—Professor A. K. Huntington, F.C.S., on Tuesdays, at 12 A.M., commencing October 5th.

The SUMMER SESSION will commence in May, 1887.

Dental Surgery and Pathology—Mr. S. J. Hutchinson, M.R.C.S., L.D.S., on Tuesdays and Fridays, at 8 A.M.
Dental Anatomy and Physiology (Human and Comparative)—Mr. Arthur Underwood, M.R.C.S., L.D.S., on Wednesdays and Saturdays, at 8 A.M.
General fee for Special Lectures required by the curriculum, £15 15s.

DENTAL HOSPITAL OF LONDON.

Consulting Physician—Sir J. Risdon Bennett, M.D., LL.D., F.R.S.
Consulting Surgeon—Mr. Christopher Heath, F.R.C.S.
Consulting Dental Surgeons—Mr. S. Cartwright, F.R.C.S.; Sir John Tomes, F.R.S.

	Dental Surgeons.	*Assist. Dental Surgeons.*
Monday, 9 A.M. ...	Mr. D. Hepburn ...	L. Matheson.
Tuesday " ...	Mr. R. Woodhouse ...	Mr. W. Hern.
Wednesday " ...	Mr. Gregson	Mr. Claude Rogers.
Thursday " ...	Mr. Storer Bennett ...	Mr. G. Parkinson.
Friday " ...	Mr. A. S. Underwood.	Mr. L. Read.
Saturday " ...	Mr. F. Canton... ...	Mr. Truman.

Anæsthesists—Mr. Braine, Mr. Bailey, Mr. Bird, Mr. Mills.
Assistant-Anæsthesists—Dr. D. W. Buxton, Dr. F. Hewitt.
Medical Tutor—Mr. W. B. Paterson.
Demonstrators—Mr. E. Latchmore, and Mr. W. B. Ackland.
House-Surgeon—Mr. C. F. Rilot.
Assistant House-Surgeons—Mr. Wynne Rouw; Mr. T. F. Colyer.

The Medical Tutor holds Classes before each examination. The Demonstrator attends each day.

The House-Surgeon and Assistant House-Surgeons attend daily while the Hospital is open.

On every day during the Sessions the Surgeons of the day will, if practicable, give Demonstrations.

The Saunders Scholarship of £20 per annum and Prizes are open for competition.

Fee for two years' Hospital Practice required by the curriculum, £15 15s. Fees for Lectures and Practice, £31 10s. Additional fees for a General Hospital for the two years to fulfil the requirements of the curriculum vary from £40 to £50.

Further particulars may be obtained on application to the Dean, at the Hospital, where he will attend in the afternoons from September 20th to October 1st inclusive, from 5 till 5.30 o'clock, or on Wednesday mornings from 10.30 till 12. MORTON SMALE, Dean.

Lectures on Public Health.—A sys-

tematic course of lectures on, and practical instruction in, Public Health, commencing on Friday, October 1st, will be given by WM. ROBERT SMITH, M.D., D.Sc., F.R.S. Ed., Sanitary Science Certificate, Cambridge.

A course of Laboratory Instruction will also be given under the superintendence of HENRY SMITH, M.D. Lond., S.Sc. Cert. Camb., Public Analyst for the Districts of Woolwich and Plumstead.

The requirements for the various qualifications in Sanitary Science will be specially kept in view.

A syllabus and further information can be obtained on application.

74, Great Russell-street, Bloomsbury-square, W.C.

The Hospital for Women, Soho

Square, W.

THE LONDON SCHOOL OF GYNÆCOLOGY.

CLINICAL ASSISTANTS are appointed every three months to work with the Physicians and Surgeons in the In-patient and Out-patient Departments. These appointments are only open to qualified medical men and students after their third year. Every opportunity is afforded of obtaining a thoroughly practical acquaintance with the diagnosis and treatment of the Diseases of Women, and to ensure this more fully the number of assistants is strictly limited. Fee, Five Guineas.

Clinical Lectures are given on alternate Thursday afternoons, at 3.30 P.M.

Operation Days, Mondays and Thursdays, at 2 P.M.

For further information, apply by letter to the Dean, at the Hospital.

North London or University College

Hospital, Gower-street. Founded A.D. 1833.

Patron: The QUEEN. Vice-Patron: The PRINCE OF WALES.

RE-BUILDING FUND.

It has been decided that it is necessary to re-build the Hospital on a plan which will better provide for the increasing numbers of the sick poor in the densely populated districts around.

It is estimated that £50,000 will be needed in order to secure a Hospital satisfying modern requirements.

Building will not be begun until £30,000 has been received.

Meanwhile, Donations will be invested, the interest being added to the principal, and will be kept separate from the ordinary funds. "In Memoriam" Wards will be named in accordance with the wishes of Donors of £5000; Donors of £2000 may name beds or cots. These sums may be paid in instalments. Donors of one hundred guineas may recommend an unlimited number of patients. Donors of thirty, twenty, or ten guineas are entitled to a certain number of Patients' Letters.

The Committee earnestly appeal for help to carry out their undertaking.

KINNERLEY.

Contributions will be gratefully received by Sir Julian Goldsmid, Bart., M.P., Treasurer of the University College; Augustus Prevost, Esq., Treasurer of the Hospital; Messrs. Coutts, 59, Strand; or N. H. Nixon, Secretary.

The School of Dermatology,

ST. JOHN'S HOSPITAL for DISEASES of the SKIN.

The large number of cases of skin-disease which pass through this hospital during the year, together with the attendance upon the practice of many students and medical men, have suggested to the Board of Management and the medical staff the establishment of a School for the systematic teaching of Dermatology, so that the practice of the hospital may be educationally utilised.

The first session will commence on Thursday, Sept. 30th, when the introductory lecture will be given by Mr. J. L. Milton.

Lectures on the Anatomy, Physiology, Histology, and Pathology of the Skin will be given by C. M. Campbell, M.D.

Lectures on the Materia Medica and Therapeutics of Agents employed in the Treatment of Skin Diseases will be given by H. Boothby Dow, M.D.

Lectures on the Principles and Practice of Dermatology will be given by Tom Robinson, M.D., and Arthur Harries, M.D.

Clinical instruction in the Out-patient Department will be given every week-day afternoon at 2 o'clock.

Special Clinical Demonstrations will be given from time to time at 4 o'clock in the afternoon.

Pupils will be admitted to follow the out-patient practice whenever the medical officers are in attendance.

A fee of 2 guineas per term will be charged. The perpetual fee will be 5 guineas.

All information can be obtained from, and entries will be made by, Mr. St. Vincent Mercier, Secretary of the School, at St. John's Hospital, Leicester-square, W.C.

Bethlem Hospital.—With a view of

extending the experience requisite for the efficient Medical Treatment and Management of the Insane, this Hospital is open for the admission of Two RESIDENT MEDICAL STUDENTS who have recently obtained their diplomas to practise Medicine and Surgery.

They will be permitted to reside in the Hospital for a term generally not exceeding six months, and will be provided with such apartments, rations, and attendance as the Committee shall consider reasonable.

They will be under the direction of the Resident Physician, and will be elected by the Committee from candidates whose testimonials appear to be most satisfactory.

Applications for the appointment, with testimonials, to be forwarded to Bridewell Hospital, Blackfriars, E.C., addressed to John Baggallay, Esq., before 2 o'clock on Saturday, October 9th, 1886.

The election will take place on October 11th, at Bridewell Hospital, and the elected candidates will be expected to commence residence on November 1st.

Candidates must attend at Bridewell Hospital on Monday, the 11th of October, at 2 o'clock.

August 28th, 1886. JOHN BAGGALLAY, Clerk, &c.

THE THROAT HOSPITAL,
GOLDEN-SQUARE, W.

PRESIDENT—LORD CALTHORPE.

HONORARY MEDICAL STAFF:—

CONSULTING PHYSICIAN—MORELL MACKENZIE, M.D. Lond.
PHYSICIANS R. NORRIS WOLFENDEN, M.D. Camb.; JAMES W. BOND, M.D. Lond.; GRENVILLE MACDONALD, M.D. Lond.
SURGEON—T. MARK HOVELL, F.R.C.S. Ed.

The Hospital contains accommodation for Eighteen In-patients, and has a very large Out-patient Department. Upwards of 4800 new patients were treated last year. Clinical Demonstrations and Instruction are given daily by the members of the Staff in attendance. Fee for Three Months' Clinical Instruction, including the Use of the Laryngoscope, 3 Guineas; Six Months', 5 Guineas. During October and November a Course of Lectures, illustrated by Clinical Cases, will be given by the Staff at the Hospital on Wednesday Evenings, at 5 o'clock, to which Medical Practitioners and past and present Students of the Hospital will be admitted free.

T. MARK HOVELL, Dean.

CENTRAL LONDON THROAT AND EAR HOSPITAL,
GRAY'S INN ROAD, W.C. (close to King's Cross Railway Station).

PRESIDENT—HIS GRACE THE ARCHBISHOP OF CANTERBURY.

HONORARY MEDICAL STAFF.

CONSULTING SURGEON—Sydney Jones, Esq., F.R.C.S.

SURGEONS.

Lennox Browne, Esq., F.R.C.S.E., attending every Monday and Thursday, at 2.30 P.M.
Arthur Orwin, Esq., M.D., attending every Wednesday and Saturday, at 2.30 P.M.
J. Dundas Grant, Esq., M.A., M.D., attending every Tuesday at 5.30 P.M., and Thursday at 2.30 P.M.

ASSISTANT-SURGEONS.

Percy Jakins, Esq., M.R.C.S., attending every Friday at 5.30 P.M., and with Surgeon every Monday and Wednesday at 2.30 P.M.
T. W. Carmalt Jones, Esq., M.A., F.R.C.S.E., attending with Surgeon every Monday, Thursday, and Saturday, at 2.30 P.M.

DENTAL SURGEON.—George Wallis, Esq., L.D.S., R.C.S.
DEFECTS OF SPEECH.—William Van Praagh, Esq.

The Hospital contains accommodation for seventeen In-Patients, and has a very extensive Out-Patient Department, which is open to all Medical Practitioners and Students for the purpose of Clinical Demonstration and Instruction during the hours of the Surgeons' visits. During the past year 4946 Out-patients and 237 In-patients were treated. Lime-light illumination is employed.

Fee for three months' attendance, two guineas; for six months, three guineas.

A Course of Lectures on the Special Diseases treated at this Hospital will be delivered during the winter months by members of the staff.

The date of these Lectures is announced in the medical journals prior to their commencement. They are free to qualified practitioners and advanced students of medicine.

RICHARD KERSHAW, Secretary.

The Royal Colleges of Physicians and SURGEONS.

Lectures for the first examination in CHEMISTRY, MATERIA MEDICA, CHEMICAL PHYSICS, and PHARMACY are now being held by Mr. J. WOODLAND, F.L.S., F.C.S., &c., at 173, Marylebone-road, N.W.

The City School of Chemistry,
27, CHANCERY-LANE, W.C.

"Patronised by the leading London Medical Men."
Result of this year's 1st L.R.C.P. Exams.: Seventy passed.
Further particulars on application.
Mr. MAURICE WILLIAMS, Principal.

University of London.—Preliminary

SCIENTIFIC (M.B.) EXAMINATION.—Instruction is given in all the subjects of the above examination at GUY'S HOSPITAL during the Winter and Summer Sessions. The Class is not confined to Students of the Hospital.—For further particulars apply to the Dean, Guy's Hospital, Southwark, S.E.

Classes for the Hygienic Physical

TRAINING OF GIRLS will be opened by Miss CHREIMAN and Staff early in October, at the Portman Rooms, Baker-street (late Madame Tussauds).

Arrangements also made at same place for the Remedial Exercise of Children and Ladies by means of adapted apparatus and otherwise.

Delicate girls and children are received in residence for short or longer periods, according to their physical requirements. Educational facilities being provided for them during such residence, and progress watched by their medical advisers.

The HYGIENIC-EXERCISE CLASSES at the Town Halls, &c., Kensington, Hampstead, Upper Norwood, Beckenham, Caterham, Brighton, &c., will be reopened on October 1st. Suburban, Country, and School Classes taken as formed, if arrangements permit.

20, Gwendwa-road, West Kensington.

Queen Charlotte's Lying-in Hospital

and MIDWIFERY TRAINING SCHOOL, Marylebone-road, London, N.W. Founded 1752. Incorporated by Royal Charter, 1885. Physicians to the In-patients, Dr. Hope and Dr. Chapman Grigg. This Hospital is in full operation, and has been recently enlarged by the construction of a New Wing, which was opened by their Royal Highnesses the Prince and Princess of Wales on 25th June last, and which has increased the number of beds from fifty-four to eighty-one. At the present time patients are being admitted at the rate of upwards of 1000 per annum, beside which there is a large out-patient maternity. The pupils are permitted to see the practice in both departments.

Medical pupils are received at all times of the year, and they enjoy unusual opportunities for seeing obstetric complications and operative midwifery, on account of the very large number of primiparous cases—upwards of three-fourths of the total admissions. Clinical instruction is given on the more important cases that present themselves in both departments. Certificates of attendance at this hospital are accepted by all universities, colleges, and licensing bodies, and a diploma is granted in midwifery. Monthly nurses and midwives are received for training. For further particulars, fees, &c., application should be made to the Secretary at the Hospital.

Normal School of Science and Royal

SCHOOL OF MINES, South Kensington and Jermyn-street.
Dean—Professor T. H. HUXLEY, F.R.S.

SESSION 1886-87.

From the 1st October, 1886, till about the end of June, 1887, the Laboratories will be open to Students in the following Sciences:—

CHEMISTRY AND AGRICULTURE.
PHYSICS.
BIOLOGY.
GEOLOGY.
MECHANICS AND MECHANICAL DRAWING.
METALLURGY, MINING, AND ASSAYING.

The following Courses of Lectures will be given during the Session:—4th October, 1886, Mechanics, Professor T. M. Goodeve, M.A.; Inorganic Chemistry, Professor Thorpe, F.R.S.; 5th October, 1886, Elementary Zoology, G. B. Howes, Esq.; 7th October, 1886, Principles of Agriculture, J. Wrightson, Esq.; 11th October, 1886, Metallurgy, Professor W. C. Roberts-Austen, F.R.S.; 8th November, 1886, Mining, Professor Warrington-Smyth, F.R.S.; 4th January, 1887, Elementary Botany, Dr. D. H. Scott; 15th February, 1887, Physics, Professor F. Guthrie, F.R.S.; Geology, Professor J. W. Judd, F.R.S.; Advanced Zoology, G. B. Howes, Esq.; Advanced Botany, Dr. D. H. Scott; Organic Chemistry, Dr. F. R. Japp, F.R.S.; Mineralogy, F. Rutley, Esq.; 15th June, 1887, Astronomical Physics, J. Norman Lockyer, Esq., F.R.S.

A course of Mine Surveying, conducted by Mr. B. H. Brough, will begin on the 15th February, 1887.

In addition to the above, lectures will be given in the Chemical Division by Drs. Hodgkinson and Percy Frankland; in the Physical Division by Messrs. Boys, Mitchell, Hoffert, and Captain W. de W. Abney, R.E., F.R.S.

For further particulars apply to the Registrar, Normal School of Science, South Kensington.

Bath Royal United Hospital.—

120 Beds.

Honorary Consulting Physician—Dr. Coates.
Honorary Physicians—Drs. Goodridge, Cole, and Fox.
Honorary Surgeons—Messrs. Stockwell, Fowler, and Freeman.
Honorary Medical Officers for Out-patients—Dr. Field, Messrs. Cowan and Craddock.
Honorary Assistant-Surgeons—Messrs. Green, Scott, and Ransford.
Dental Surgeon—Mr. Gaine.
Pathological Registrar and Curator—Mr. H. Culliford-Hopkins.

The Hospital is recognised by the Royal College of Physicians, Surgeons, &c., and licensed for dissections. It contains a Library and an excellent Museum, in which are a large number of interesting specimens both in Pathology and Comparative Anatomy. Fees for attendance, twelve months £10 10s., six months £5 5s. Number of patients admitted during the past year 1054, out-patients 8256, operations performed 156, anæsthetics recorded 148.—For further particulars, apply to the Registrar and Curator.

Education.—To Professional Men of

Limited Income.—A few BOYS, sons of the above, can be admitted into a well-known school on greatly reduced terms.—For full particulars, address, in strict confidence, Mu, care of Messrs. Rolfe Bros., 6, Charterhouse-buildings, Aldersgate, City, E.C.

University of Durham College of Medicine, Newcastle-upon-Tyne.

The WINTER SESSION will be opened on October 1st, 1886, at 2 P.M., in the Wood Memorial Hall, when the Scholarships and Prizes will be presented.

LECTURES—WINTER SESSION.

Anatomy—Dr. Mears.
Physiology—Mr. Williamson, F.R.C.S., and Dr. Oliver.
Chemistry—Professor Bedson, D.Sc.Lond.
Medicine—Professor Philipson, M.A., M.D., D.C.L., F.R.C.P.
Surgery—Dr. Arnison and G. Y. Heath, M.D., M.B. Lond., D.C.L., F.R.C.S.
Hygiene—Mr. Henry E. Armstrong.
Psychology—Dr. Wickham, F.R.S.E.
Physics—Professor A. S. Herschel, M.A., F.R.S.
Zoology—Professor Brady, M.A., F.R.S.

SUMMER SESSION.

Botany—Dr. Murphy.
Materia Medica—Mr. McBean.
Practical Chemistry—Professor Bedson.
Practical Physiology—Dr. Oliver.
Midwifery—Dr. Nesham.
Diseases of Women—Dr. Gibson.
Medical Jurisprudence—Mr. Page.
Pathology—Dr. Drummond.
Operative Surgery—Dr. L. Armstrong.
Tutor in Arts—Rev. J. Bulmer, B.D.

LICENCES, DEGREES, AND CERTIFICATES IN MEDICINE, SURGERY, AND SANITARY SCIENCE.—Two Licences, three Degrees, and one Certificate are conferred by the University of Durham—viz., Licences in Medicine and in Surgery, the Degrees of Bachelor in Medicine, Master in Surgery, and Doctor in Medicine, and a Certificate of Proficiency in Sanitary Science.

Attendance at the University of Durham College of Medicine during one of the four years of professional study, or subsequently to qualification elsewhere, is required as part of the curriculum for the Degrees, except in the case of Practitioners of more than fifteen years' standing, and forty years of age, who can obtain the Degree after examination only.

There are three Examinations for the Degree of M.B.: the First, consisting of Elementary Anatomy and Physiology, Chemistry, with Physics, and Botany; the Second, of Anatomy, Physiology, Materia Medica, with Pharmacy; and the Third, of Medicine, Surgery, Midwifery, and the allied subjects. Candidates who shall have passed the First and Second Examinations for the Degree will be exempt from the First and Second Examinations of the Conjoint Board in England. Candidates who shall have passed the First Examination of the Conjoint Board in England will be exempt from the First Examination for the Degree, except in the subjects of Chemistry with Physics and Botany.

The First and Second Examinations for the Degree of M.B. may be passed prior to the commencement of attendance at Newcastle.

The extra Arts Examination must be passed previously to the Candidate's entry for the Third Examination for the Degree.

Lists of the questions of former Examinations, together with full particulars and synopses of the subjects, will be found in the Prospectus, which may be obtained by application to the Registrar.

SCHOLARSHIPS, &c.—The following Scholarships and Prizes are awarded annually:—A University of Durham Scholarship, value £100, for Proficiency in Arts, awarded to full Students in their first year. The Dickinson Scholarship, value £15, and a Gold Medal, for Medicine, Surgery, Midwifery, and Pathology. The Tulloch Scholarship, value £20, for Anatomy, Physiology, and Chemistry. The Charlton Scholarship, value about £35, for Medicine. The Gibb Scholarship, value £25, for Pathology. The Goyder Memorial Scholarship (at the Infirmary), value about £15 for Clinical Medicine and Clinical Surgery. At the end of each Session a Silver Medal and Certificates of Honour are awarded in each of the regular classes. Assistant Demonstrators of Anatomy, receiving each an honorarium of £5, two Prosectors, and two Assistant Physiologists are elected yearly. Two Pathological Assistants, two Assistants to the Dental Surgeon, and one Assistant in the Eye Department, are also elected every three months. Medical and Surgical Assistants, Clinical Clerks and Dressers, are appointed every three months.

NEWCASTLE-ON-TYNE INFIRMARY.

MEDICAL AND SURGICAL STAFF.

Physicians—Drs. Philipson, Drummond, Oliver, and Lindsay.
Surgeons—Drs. Arnison, L. Armstrong, Hume, and Mr. Page.
Assistant Surgeons—Mr. T. A. Dodd and Mr. Williamson.
Pathologist—Dr. Drummond.
Dental Surgeon—Mr. E. Fothergill.
House-Physician—Mr. J. Waldy.
Senior House-Surgeon—Dr. G. W. Ridley.
Junior House-Surgeon—Dr. F. Bramwell.

The Infirmary contains 260 beds. There are special Wards for the treatment of Children, and for Ophthalmic and Syphilitic Diseases. Clinical Lectures are delivered by the Physicians and Surgeons in rotation. Pathological Demonstrations are given as opportunity offers by the Pathologist. Practical Midwifery can be studied at the Newcastle Lying-in Hospital, where there is an out-door practice of about 300 cases annually. Lectures are given on Psychological Medicine at the Coxlodge Lunatic Asylum by Dr. R. H. B. Wickham, Medical Superintendent. A Special Course of Instruction is given in the Hospital for Infectious Diseases by the Superintendent and City Officer of Health, Dr. H. E. Armstrong.

FEES.

(a) A Combination Ticket for Lectures at the College may be obtained—
1. By payment of 60 guineas on entrance.
2. By payment of 35 guineas at the commencement of the first and second Winter Sessions.
3. By three annual instalments of 30, 25, and 20 guineas respectively, at the commencement of the sessional year.

(b) Fees for attendance on Hospital Practice—
For three months' Medical and Hospital Practice, 5 gs.
" six " " " 8 "
" one year's " " " 12 "
" perpetual " " " 25 "
or by three instalments at the commencement of the sessional year—viz., first year, 12 guineas; second year, 10 guineas; third year, 6 guineas. Or by two instalments—viz., first year, 14 guineas; second year, 12 guineas.

(c) Single Courses of Lectures, 5 guineas.

Fees for Lectures, &c., at College must be paid to the Registrar, and fees for Hospital Practice to the House-Physician at the time of entry.

Further particulars with regard to examinations may be obtained from Dr. Luke Armstrong, 1, Eldon-square, Newcastle-upon-Tyne; or, on all other matters connected with the College, from Mr. Henry E. Armstrong, 6, Wentworth-place, Newcastle-upon-Tyne.

University of Durham.—The next

Examination for the Certificate of Proficiency in Sanitary Science will begin on September 20th, 1886. The next First Examination for Degrees in Medicine and Surgery will begin on September 13th, 1886. The next Second Examination for the Degrees will begin on September 20th, 1886.

The next Examination for the Degree of M.D. for Practitioners of fifteen years' standing, and for the Degree of M.D. and the Final Examinations for the Degrees of M.B. and M.S., will begin on December 6th, 1886.

Intending Candidates must forward their names, together with the fee, at least twenty-eight days before the date of commencement of the Examination for which they wish to enter.

Full particulars, prospectuses, and examination papers may be obtained on application to the Registrar of the University of Durham College of Medicine, Dr. Luke Armstrong, Eldon-square, Newcastle-upon-Tyne.

The Mason College, Birmingham.

Session 1886-87.

FACULTIES OF ARTS AND SCIENCE.

The Session will commence on Friday, Oct. 1st, 1886.

Syllabuses, containing full information as to Entrance and other Scholarships, the various courses of instruction, lecture hours, fees, &c., may be obtained from Messrs. Cornish, New-street, Birmingham, price 3d., by post 4½d.

GEO. H. MORLEY, Secretary.

Owens College, Victoria University, Manchester.

MEDICAL DEPARTMENT.

Principal—J. G. GREENWOOD, LL.D.
Dean—Professor ALFRED H. YOUNG, M.B., F.R.C.S.

PROFESSORS AND LECTURERS.

Anatomy, Descriptive and Practical—Professor Alfred H. Young, M.B., F.R.C.S.
Physiology and Histology—Brackenbury Professor, William Stirling, M.D., D.Sc.
Chemistry—Vacant.
Organic Chemistry—Prof. C. Schorlemmer, F.R.S.
Botany—Prof. W. C. Williamson, LL.D., F.R.S.
Zoology and Comparative Anatomy—Professor A. Milnes Marshall, M.D., M.A., D.Sc., F.R.S.
Materia Medica and Therapeutics—Professor D. J. Leech, M.D., F.R.C.P.
Pharmacy—Professor D. J. Leech, M.D., F.R.C.P.
Medicine—Professor Sir William Roberts, M.D., F.R.S., F.R.C.P.; Professor J. E. Morgan, M.D., M.A., F.R.C.P.
Clinical Medicine—Henry Simpson, M.D., Professor J. E. Morgan, M.D., M.A., F.R.C.P.; Professor D. J. Leech, M.D., F.R.C.P.; Professor Julius Dreschfeld, M.D., F.R.C.P.; James Ross, M.D. LL.D., F.R.C.P.; Graham Steell, M.D., M.R.C.P.
General Pathology and Morbid Anatomy—Professor Julius Dreschfeld, M.D., F.R.C.P.
Surgery—Professor Edward Lund, F.R.C.S.; Assistant Lecturer, Fredk. A. Southam, M.B., M.A., F.R.C.S.
Clinical Surgery—Fredk. Ashton Heath, M.R.C.S.; Walter Whitehead, F.R.C.S.E., F.R.S.E.; Thomas Jones, M.B., B.S., F.R.C.S.; James Hardie, M.D., F.R.C.S.; Fredk. A. Southam, M.B., M.A., F.R.C.S.; George A. Wright, M.B., B.A., F.R.C.S.
Practical Surgery—Thomas Jones, M.B., B.S., F.R.C.S.
Surgical Pathology—Professor Alfred H. Young, M.B., F.R.C.S.
Obstetrics and Gynæcology—Professor Chas. J. Cullingworth, M.D., M.R.C.P.
Clinical Obstetrics and Gynæcology—D. Lloyd Roberts, M.D., F.R.C.P., F.R.S.E.; Professor Chas. J. Cullingworth, M.D., M.R.C.P.
Diseases of Children—Henry Ashby, M.D., M.R.C.P.
Medical Jurisprudence—J. Dixon Mann, M.D., M.R.C.P.
Hygiene—Arthur Ransome, M.D., M.A., F.R.S.
Mental Diseases—George William Mould, M.R.C.S.
Ophthalmology—David Little, M.D.
Clinical Ophthalmology—David Little, M.D.; Chas. E. Glascott, M.D.
With Assistant Lecturers in all the principal subjects.

SCHOOL OF DENTAL SURGERY.

Dental Surgery—Leonard Matheson, L.D.S.
Dental Anatomy and Physiology—A. M. Paterson, M.D., M.R.C.S.
Dental Mechanics—Thomas Tanner, L.D.S.
Dental Metallurgy—C. A. Burghardt, Ph.D.

The Classes at the College qualify for Degrees in the Victoria University, for many of the Degree Examinations of the University of London, and for the Diplomas of the Royal Colleges of Physicians and Surgeons of London, &c.

Prospectuses of the different Departments: I. Day Classes; II. Medical Department; III. Department for Women; IV. Evening Classes, will be forwarded on application to the Registrar.

HENRY W. HOLDER, M.A., Registrar.

Queen's College, Birmingham.

President—Lord WINDSOR.
Vice-President—The Rev. W. WILKINSON, D.D., Hon. Canon of Worcester and Rural Dean.
Warden—The Rev. W. H. POULTON, M.A.
Hon. Secretary—Professor WINDLE, M.A., M.D.

SCHOOL OF MEDICINE.

The WINTER SESSION will commence on Friday, the 1st of Oct. next.

For the purpose of Medical Education, Queen's College is associated with Mason Science College. By this arrangement Medical Students of Queen's College receive their instruction in Physiology, Chemistry, Chemical Physics, and Botany in Mason College, and thus enjoy the advantages afforded by the well-appointed laboratories of the latter institution. In Queen's College during the past session a New Pathological Laboratory and Materia Medica Museum and Laboratory have been opened. The Anatomical Collection in the Museum has been considerably enlarged, and every endeavour has been made to render the course of Medical Education thorough and complete.

SCHOLARSHIPS and PRIZES are awarded annually, full particulars of which may be obtained by reference to the Prospectus of the College, or by application to the Warden, or to the Hon. Sec.

FEES.—The Composition Fee (not perpetual) for admission to Lectures required for ordinary medical qualifications is 60 guineas, payable in two equal annual instalments.

COLLEGE STAFF.

N.B.—The CLASSES marked * will be held in MASON SCIENCE COLLEGE.

Medicine—Sir Balthazar Foster, M.D., F.R.C.P.; Sir James Sawyer, M.D. Lond., F.R.C.P.
Surgery—Oliver Pemberton, F.R.C.S.; Furneaux Jordan, F.R.C.S.
Anatomy—Bertram C. A. Windle, M.A., M.D., B.Ch. Dub.
Demonstrators of Anatomy—Jordan Lloyd, M.B., M.S., F.R.C.S. Eng.; W. F. Haslam, F.R.C.S. Eng.; W. A. Foxwell, B.A., M.B., M.R.C.P. Lond.
*Systematic Physiology—John Berry Haycraft, M.B., B.Sc., F.R.S. Edin. Demonstrator: E. Teichelmann.
*Chemistry—William A. Tilden, D.Sc. Lond., F.R.S.
*Chemical Physics—W. Poynting, M.A. Cantab.
Pathology—Gilbert Barling, M.B., B.S. Lond., F.R.C.S. Eng.
*Histology and Practical Physiology—John Berry Haycraft, M.B., B.Sc., F.R.S. Edin.
*Botany and Vegetable Physiology—William Hillhouse, M.A. Cantab., F.L.S.
*Practical Chemistry—W. A. Tilden, D.Sc. Lond., F.R.S.
Materia Medica and Therapeutics—Edwin Rickards, M.A., M.B. Oxon., F.R.C.P.; C. W. Suckling, M.D. Lond., M.R.C.P.
Forensic Medicine—J. St. S. Wilders, M.R.C.S.
Toxicology—A. Bostock Hill, M.D., F.I.C.
Midwifery and the Diseases of Women—John Clay, M.R.C.S.; John Bassett, M.D.
Practical Surgery—Demonstrators: T. H. Bartleet, M.B. Lond., F.R.C.S.; Bennett May, M.B., B.S. Lond., F.R.C.S.
Ophthalmic Surgery—J. Vose Solomon, F.R.C.S.
Lunacy and Mental Diseases—E. B. Whitcombe, M.R.C.S.
Curator of the Museum—Bertram C. A. Windle, M.A., M.D., B.Ch. Dub.
Medical Tutor—E. Hogben, B.A., M.B., B.Ch. Dub.

HOSPITAL PRACTICE.

All students of Queen's College attend Clinical Lectures and Practice at both the General and the Queen's Hospitals for a common fee. These Hospitals comprise In-patient Departments of about 400 beds, and Out-patient Departments of about 70,000 cases annually.

Valuable Clinical Appointments are allotted to students on competitive examination.

Prizes for Clinical Medicine, Surgery, and Midwifery are awarded annually.

FEES:—The Composition Fee for the full Course of Hospital Practice (inclusive of Clinical Course and appointments of Clinical Clerk and Surgical Dresser) is 40 Guineas, payable in two equal annual instalments.

HOSPITAL STAFF.

Materia Medica and Therapeutics—J. E. Shaw, M.B. Edin.
Practical Physiology and Histology—G. F. Atchley, M.B. Lond.
Demonstrators of Physiology—G. M. Smith, M.R.C.S., and J. Michell Clarke, M.A., M.B. Cantab.
Botany—Prof. A. Leipner.
Practical Chemistry—T. Coomber, F.C.S.
Comparative Anatomy—Prof. Lloyd Morgan.
Medical Tutor—A. L. Anderson, M.B.

Composition Fee for Lecture, 60 guineas.

Hospital Practice may be attended either at the Bristol Royal Infirmary or at the Bristol General Hospital.

Fees, including Clinical Lectures:—Infirmary: Perpetual Medical and Surgical Practice, 20 guineas each, or, in one payment, 35 guineas. Hospital: Perpetual Medical and Surgical Practice, £20 each, or, in one payment, 35 guineas.

Scholarships and Prizes.—Numerous valuable Scholarships and Prizes are offered by the Medical School and by the Infirmary and the Hospital.

For prospectus and particulars, apply to
E. MARKHAM SKERRITT, M.D., Dean.

Bristol General Hospital.—Scholarships

and PRIZES.—Two Entrance Scholarships, one of 30 guineas, one of £20; Clarke Surgical Scholarship, £15; Martyn Memorial Pathological Scholarships, two of £10 each; Sanders Scholarship, £22 10s.; Committee Gold and Silver Medals.

The regulations respecting the above may be obtained on application to
E. MARKHAM SKERRITT, M.D., Dean.

Bristol Royal Infirmary. — Founded

1735. 264 beds.

The WINTER SESSION begins Monday, October 4th, 1886.

Two Entrance Scholarships, 35 guineas and 10 guineas; examination in Latin, English, Physics, Chemistry, &c., on Oct. 30th, 1886. Two Gold Medals, with 7 guineas additional, for Medicine and Surgery respectively. Clark Prize, 15 guineas; Tibbits Surgical Prize, 9 guineas; Leonard Surgical Prize, 7 guineas. Three Pathological Prizes, 3 guineas each. Full particulars from
W. H. SPENCER, M.D., Dean.

VICTORIA UNIVERSITY.

University College, Liverpool.

MEDICAL DEPARTMENT.
SESSION 1886-87.

THE LECTURES AND CLASSES FOR THE WINTER SESSION OF THE MEDICAL FACULTY commence on MONDAY, OCTOBER 4th.

PROFESSORS AND LECTURERS IN THE MEDICAL FACULTY:

Medicine—T. R. Glynn, M.D., F.R.C.P.
Surgery—Rushton Parker, B.S., F.R.C.S.
Anatomy—W. Mitchell Banks, F.R.C.S.
Physiology—Richard Caton, M.D., M.R.C.P.
Pathology—A. Davidson, M.A., M.D., F.R.C.P.
Ophthalmology—H. A. Browne, M.R.C.S.
Chemistry—J. Campbell Brown, D.Sc.
Experimental Physics—Oliver Lodge, D.Sc.
Midwifery—J. Wallace, M.D.
Hygiene—E. W. Hope, M.D., B.Sc.
Materia Medica—W. Carter, LL.B., M.D., F.R.C.P.
Medical Jurisprudence—F. T. Paul, F.R.C.S.
Botany—G. Shearir, M.D., F.L.S.
Zoology—W. A. Herdman, D.Sc., F.L.S.
Clinical Medicine—A. T. M. Waters, M.D., F.R.C.P.
,, ,, T. R. Glynn, M.D., F.R.C.P.
,, ,, A. Davidson, M.A., M.D., F.R.C.P.
Clinical Surgery—E. R. Bickersteth, F.R.C.S.
,, ,, R. Harrison, F.R.C.S.
,, ,, W. Mitchell Banks, F.R.C.S.

The Medical and Surgical Tutors and the Demonstrators of Anatomy, Physiology, and Chemistry are in attendance daily at the Hospital and Medical School.

Numerous Prizes and Scholarships of the value of £325 are offered annually for competition.

The curriculum qualifies for the Victoria and London Universities and the Royal University of Ireland; for three years for the Universities of Edinburgh and Durham; and for all the Colleges of Physicians and Surgeons.

For prospectus and further information apply to the Vice-Dean, Mr. Paul, 38, Rodney-street, Liverpool.

Northumberland, Durham, and New-

CASTLE INFIRMARY for DISEASES of the EYE.—Mr. Jeaffreson's Clinical Lectures and Ophthalmoscopic Demonstrations will be continued upon days which will be subsequently announced. Gentlemen desirous of attending must apply by letter for a card of admission.

Preparatory School of Medicine.

THE WOLVERHAMPTON AND STAFFORDSHIRE GENERAL HOSPITAL.

A Clinical and Training Institution for Gentlemen intended for the Medical Profession.

Beds, 224.

MEDICAL AND SURGICAL STAFF.

Dr. FOTHERICK. | Mr. VINCENT JACKSON.
Dr. MALCH. | Mr. J. O'B. KOUGH.
Mr. F. E. MANBY.

The Hospital contains large Male and Female Accident Wards, Wards for Cases of Burns; General Medical and Surgical Wards; a Ward for Diseases Peculiar to Women; a Children's Ward; a detached Fever Wing; and a Women's Surgical Infirmary; also a commodious semi-detached Out-patient Department. The General Wards have Clinical rooms attached in which the Analysis and Microscopic Inspection of the Urine are conducted, also Ophthalmoscopic and Laryngoscopic examinations.

The Hospital is an excellent institution for preparing and training gentlemen intended for the medical profession, and it offers to them unsurpassed opportunities of acquiring a complete professional groundwork, and an elementary knowledge of medical subjects, previously to their entering a medical college.

In the Hospital the Pupils are required to attend daily in the Casualty-room in the out-patient department and in the wards, the instruction afforded being of the most practical nature, including tooth-drawing, bandaging, the application of splints, and every kind of elementary professional detail; likewise how to observe and examine patients. The art of Dispensing, the preparation of drugs and of pharmaceutical compounds, can be learnt in the Hospital Dispensary and Laboratory.

Operations are performed on Thursday, at 11 o'clock, and practitioners are welcome.

The practice of the Hospital is recognised by all the Examining Boards

FEES.

For Hospital Practice.

Six months	6 guineas.
Twelve months	12 guineas.
Perpetual	21 guineas.

Some members of the Honorary Staff receive Resident Pupils.

For further particulars apply to the Honorary Secretary of the Medical Committee.

NOTICE.

The Preliminary Examinations of the

Royal Colleges of Physicians and Surgeons of Edinburgh, conducted by the Educational Institute of Scotland, will be held on

7th, 8th, and 9th October, 1886,
7th, 8th, and 9th April, 1887,
7th, 8th, and 9th July, 1887.

THOMAS MORRISON, LL.D., F.E.I.S.
(Principal of the Free Church Training College, Glasgow).
Secretary to the Board of Examiners.

The Institute will shortly issue a Calendar containing all necessary information about the Examinations.

Particulars on application to Mr. Alex. Mackay, 7, George-street, Edinburgh.

Edinburgh, 20th August, 1886.

Notice is hereby given, that the Periods

of EXAMINATION for the Licence and Fellowship of the Royal College of Surgeons of Edinburgh for 1886-87 will be as follows:—

1886. Thursday, October 7.
1887. ,, January 6.
,, ,, April 21.
,, ,, July 21.

and that the Examinations for the Licence in Dental Surgery will commence on the Tuesdays preceding the above dates.

JOSEPH BELL, Secretary and Treasurer, 2, Melville-crescent, Edinburgh

Notice is hereby given, that the Pro-

fessional EXAMINATION PERIODS for the Triple Qualification of the Royal Colleges of Physicians and Surgeons of Edinburgh, and Faculty of Physicians and Surgeons of Glasgow, for 1886-87, will commence as follows:—

In Edinburgh—

1886. Wednesday, October 13.
1887. ,, January 12.
,, ,, April 27.
,, ,, July 6.

In Glasgow—

1887. Wednesday, April 13.
,, ,, July 20.

JAMES ROBERTSON, 4, Lindsay-place (Geo. IV. Bridge), Edinburgh Inspector and Treasurer for Edinburgh.

ALEXANDER DUNCAN, Faculty Hall, 242, St. Vincent-street, Glasgow, Inspector and Treasurer for Glasgow.

Yorkshire College, Leeds.

MEDICAL DEPARTMENT.

The WINTER SESSION, being the Fifty-sixth of the LEEDS SCHOOL OF MEDICINE, will be opened on Friday, October 1st, when an Address will be delivered in the Chemical Lecture Theatre, College-road, at 4 P.M., by the Rev. F. J. JAYNE, M.A., Vicar of Leeds. Tickets of admission may be obtained from any of the Staff, or on application at the College.

PROFESSORS, LECTURERS, AND DEMONSTRATORS.

Medicine—Professor J. E. Eddison, M.D. Edin.; Thomas Churton, M.D.Aber.
Surgery and Practical Surgery—Professor T. R. Jessop, F.R.C.S.; Edward Atkinson, F.L.S.
Descriptive and Surgical Anatomy—Professor A. F. McGill, F.R.C.S.
Lecturer on Osteology—Edmund Robinson.
Practical Anatomy—Demonstrator: W. Owen Travis, M.B., M.S. Honorary Demonstrators: R. N. Hartley, M.B., B.S.Lond.; W. H. Brown; F. P. Flood; Herbert Rowe.
Physiology, Practical Physiology, and Histology—Professor De Burgh Birch, M.D.Edin., F.R.S.E.; A. G. Barrs, M.D.Edin., M.R.C.P.
Pathology and Morbid Histology—Ernest H. Jacob, M.A., M.D. Oxon.
Midwifery—Charles J. Wright.
Diseases of Women and Children—Jas. Braithwaite, M.D.Lond.
Forensic Medicine—Thomas Scattergood.
Demonstrator of Practical Toxicology—C. H. Bothamley, F.C.S.
Materia Medica—J. B. Hellier, M.D.Lond.
Chemistry and Practical Chemistry—Professor Arthur Smithells, B.Sc.Lond., F.C.S.
Demonstrator—C. H. Bothamley, F.C.S.
Botany—Professor L. C. Miall, F.L.S., F.G.S.
Operative Surgery—A. W. Mayo Robson, F.R.C.S.
Ophthalmology—J. A. Nunneley, M.B.Lond.
Mental Diseases—W. Bevan Lewis.
Hygiene—R. N. Hartley, M.B., B.S.Lond.
Comparative Anatomy and Biology—Professor L. C. Miall, F.L.S., F.G.S.
Hospital Instruction—By the Physicians and Surgeons to the General Infirmary.

The Leeds Public Dispensary, the Fever Hospital, the Hospital for Women and Children, and the West Riding Lunatic Asylum, are also available for the instruction of Students.

The Lectures and Hospital Practice qualify students for the various Examining Boards. Students can enter for the Hospital Practice, or the lectures, or for a single course of lectures, separately.

The prospectus and further information may be obtained from the Registrar of the College, to whom all fees are payable.

Glasgow Royal Infirmary and School

OF MEDICINE.

The WINTER SESSION, 1886-87, will commence on Tuesday, Oct. 27th. John Barlow, M.D., F.R.C.S., will give the Introductory Address.

WINTER SESSION.

Chemistry, 10 A.M.—James M. Milne, Ph.D.
Junior Anatomy, 11 A.M. } H. E. Clark, M.R.C.S.,
Anatomical Demonstrations, 4 P.M. } and John Macintyre,
Practical Anatomy, 10 A.M. to 5 P.M. } M.B. Demonstrator.
Surgery, 11 A.M.—Wm. Macewen, M.D.
Practice of Medicine, 12 noon—J. W. Anderson, M.D.
Materia Medica, 1 P.M.—John Dougall, M.D.
Physiology, 3 P.M.—John Barlow, F.R.C.S.
Midwifery and Diseases of Children, 3 P.M.—James Stirton, M.D.
Diseases of the Throat and Nose, 12 noon—D. Newman, M.D.

SUMMER SESSION.

Practical Pathology, 8 A.M. }
Pathology, 10 A.M. } D. Newman, M.D.
Medical Chemistry, 10.30 A.M.—Dr. James M. Milne.
Medical Jurisprudence, 11 A.M.—John Glaister, M.D.
Anatomy, 12 noon.—H. E. Clark, M.R.C.S.
Operative Surgery, 12 noon—W. Macewen, M.D.
Nervous and Mental Diseases, 12 noon—Alex. Robertson, M.D.
Midwifery, 3 P.M.—James Stirton, M.D.
Practical Physiology, 1 P.M.—J. Barlow, M.D., F.R.C.S.
Aural Surgery, 4 P.M.—Johnstone Macfie, M.D.
Dental Surgery, 3 P.M.—J. C. Woodburn, M.D.
Diseases of the Eye, 4 P.M.—H. E. Clark, M.R.C.S.
Diseases of the Skin, 12 noon—James Provan, M.D.
Diseases of the Throat and Nose, 3 P.M.—David Newman, M.D.

CLASS FEES.—For each Course: First Session, £2 2s.; Second Session and Perpetual, £1 1s. Anatomy: First Session, £4 4s.; Summer Session, £1 11s. 6d.; Second Winter Session, £4 4s. Afterwards the Fee for lectures and Practical Anatomy is £1 1s. per Session.

HOSPITAL STAFF.

Physicians—Dr. Wood Smith, Dr. Robert Perry, Dr. Robertson, Dr. Wallace Anderson.
Surgeons—Dr. Macewen, Dr. Dunlop, Mr. Clark, Dr. Lothian, Dr. Knox, Dr. Fleming.
Diseases of Women—Dr. Stirton.
Assistant Physicians—Dr. Dougall, Dr. Middleton, Dr. Henderson, Dr. Campbell Black, Dr. Macphee, Dr. Lindsay Steven.
Assistant Surgeons—Dr. Barlow, Dr. Adams, Dr. Muir, Dr. Shaw, Dr. Whitson, Dr. Macintyre.
Aural Surgeon—Dr. Macfie. Dental Surgeon—Dr. Woodburn.
Diseases of the Throat—Dr. Newman. Diseases of the Skin—Dr. Provan. Pathologist—Dr. Newman. Vaccinator—Dr. Tannahill.

Number of beds, 542. Number of in-patients last year, 5461.

FEES.—For Hospital Practice and Clinical Lectures—First Year, £10 10s.; Second and Perpetual, £10 10s.; Six Months, £6 6s.; Three Months, £4 4s.

Attendance on the above qualifies for the Universities in accordance with their regulations, and for all the other qualifying Boards.

Prospectus can be obtained from Dr. Thomas, the Superintendent of the Hospital.

Royal College of Physicians of EDINBURGH.

REGULATIONS REGARDING THE FELLOWSHIP AND MEMBERSHIP OF THE COLLEGE.

I.—OF THE FELLOWSHIP.

1. No one shall be elected a Fellow of the College until he has been at least one year a Member thereof, and has attained the age of twenty-five years.

2. Every motion for the election of a Fellow shall be made at the quarterly meeting of Fellows by one of the Fellows present, and seconded by another; and this motion shall be determined by ballot at the next quarterly meeting of Fellows, a majority of three-fourths being necessary to carry it in the affirmative.

3. If an urgent reason satisfactory to the Council be assigned, a Candidate may be proposed at an extraordinary meeting of the Fellows summoned for the purpose, and his petition may be balloted for at an extraordinary meeting of the Fellows specially summoned for the purpose; provided that the holding of this special meeting be agreed to by a majority of five-sixths of the Fellows present at the meeting at which the Candidate was proposed; provided also that not less than one week intervene between the two meetings, and that due notice of the intended ballot be given in the billets summoning the second meeting. The Candidate shall in this case pay to the Treasurer a sum of Ten Guineas in addition to the ordinary Fees.

4. Every Fellow resident within five miles from the General Post-Office of Edinburgh shall, on his election, have his name placed on the Roll of Attendance, and shall pay the Annual Contribution, and be subject to all the Laws of the College regarding Fines. Fellows resident beyond five miles shall have the option of having their names on the Roll of Attendance or not; but if their names be on the Roll of Attendance, they shall pay the Annual Contribution and be subject to Fines.

II.—OF THE MEMBERSHIP.

1. Any Licentiate of a College of Physicians, or Graduate of a British or Irish University, with whose knowledge of Medical and General Science the College may be satisfied, may be admitted a Member of the College, provided he shall have attained the age of twenty-four years.

2. Every motion for the election of a Member shall be made at a quarterly meeting of Fellows by one of the Fellows present, and seconded by another; and this motion shall be determined by ballot at the next quarterly meeting, a majority of three-fourths being necessary to carry it in the affirmative.

3. Every Candidate for the Membership (except such as shall be admissible under the provisions of Section 6) shall be required to pass an Examination—

(1) On the Principles and Practice of Medicine, including Therapeutics.

(2) On one of the following subjects, to be selected by the Candidate:—(*a*) Pathology, including Morbid Anatomy; (*b*) Medical Jurisprudence and Public Health; (*c*) Midwifery and the Diseases of Women; (*d*) Psychological Medicine.

4. Application for the Membership shall be made through the Secretary, who shall transmit to the Candidate a copy of the Regulations and Plan of Examination, together with a Form of Petition.

5. The Candidate shall return the petition duly filled up to the Secretary, and shall at the same time transmit Testimonials of recent date from well-known members of the profession, certifying as to his professional and social standing. These documents shall be submitted to the Council, who shall also employ such other methods of scrutiny as they may deem necessary. If satisfied as to the eligibility of the Candidate, the Council shall authorise his examination by the Board of Examiners, who shall report the result of the examination to the Council. If the report of the Examiners be satisfactory, the Council shall report the same to the College at the next quarterly meeting, when it shall be competent for a motion to be made for the election of such Candidate to the Membership of the College.

6. If any Candidate who has attained the age of forty years, and has been a Registered Practitioner for not less than ten years, shall produce testimonials showing that he has been distinguished for his scientific attainments, or eminence as a Medical Practitioner, the Council may, if they see fit, exempt him from the whole or any part of the prescribed examination.

7. Every motion for the election of a Member shall be made at a quarterly meeting of the College by one of the Fellows present, and seconded by another, and the motion shall be determined by ballot at the next quarterly meeting, a majority of three-fourths of the Fellows present being necessary to carry it in the affirmative.

8. The dates of the Examinations for the year ending 30th July, 1887, shall be 12th and 13th October, 1886, the 11th and 12th January, the 12th and 13th April, and the 13th and 14th July, 1887; but application must be made to the Secretary not less than one month previous to the date of the Examination at which the Candidate proposes to appear.

III.—OF THE FEES.

1. The fee to be paid by a Member shall be Thirty Guineas.

2. A Licentiate who has obtained the Licence prior to the 1st August, 1875, when raised to the rank of Member, shall pay Twenty Guineas; a Licentiate obtaining the Licence subsequent to that date shall, when raised to the rank of Member, pay Fifteen Guineas.

3. When a Member shall be raised to the rank of Fellow he shall pay Thirty Guineas, exclusive of Stamp-duty.*

4. All Candidates for Fellowship or Membership must lodge their Fees, and the amount of Stamp-duty payable at the time to Government, with the Treasurer, previously to presenting their petitions.

Edinburgh, August 2nd, 1886. G. A. GIBSON, M.D., Hon. Sec.

* The Stamp-duty on the Fellowship payable to Government is £25.

Royal College of Physicians of EDINBURGH.

REGULATIONS TO BE OBSERVED BY CANDIDATES FOR THE CERTIFICATE OF QUALIFICATION IN PUBLIC HEALTH TO BE CONFERRED BY THE COLLEGE.

The Royal College of Physicians of Edinburgh, considering the great and rising importance of the Public Health Department of State Medicine, its natural and popular distinction from ordinary Medicine, and the number of Public Health appointments which already exist, has resolved to grant to all candidates who conform to the following regulations, and are declared by the Examiners to be duly qualified to practise as Public Health Officers or Medical Officers of Health, a Certificate of Qualification under the College seal and authority, which may be registered in the Medical Register, in terms of the Medical Act, 1886.

REGULATIONS.

I.—GENERAL REGULATIONS.

1. Candidates shall be already on the Medical Register, and be entered there as possessing a qualification in Medicine.

2. Candidates shall not, in the meantime, be required to attend any Special Courses of Instruction; but their attention is directed particularly to Courses of Lectures on State Medicine, and to the Practice of Analytical Chemistry.

3. Candidates shall be subjected to two Examinations. Such Examinations may be taken simultaneously, or with an interval not exceeding twelve months.

4. The Examinations shall be written, oral, and practical.

5. The Examinations shall be held in the Physicians' Hall, or elsewhere if found more convenient.

6. Rejected Candidates shall not be admitted for re-examination till after the expiry of six months.

7. Holders of the Certificate are briefly designated as "Public Health Cert. R.C.P.E."

II.—EXAMINATIONS.

1. THE FIRST EXAMINATION SHALL EMBRACE—
   1. *Physics.*—Especially Pneumatics, Hydrostatics, Hydraulics, and Engineering in relation to Sanitary Operations, including a knowledge of Architectural and other Plans.
   2. *Chemistry.*—Especially Analysis of Air, Water, Food, including the Biology of Putrefaction and allied processes, with easy Practical Chemical Analysis bearing on Public Health.
   3. *Meteorology.*—Including Climate, Topographical and Seasonal Influences in relation to Health and Disease.

2. THE SECOND EXAMINATION SHALL EMBRACE—
   1. *Epidemiology and Endemiology.*—Including the corresponding departments in the Diseases of Animals and Plants; Contagious Diseases; Diseases of Periods of Life, Professions, Trades, Seasons, and Climates.
   2. *Practical Hygiene.*—Duties of a Health Officer; Food; Water Supply; Sewerage and Drainage; Nuisances; Construction of Hospitals, Public Buildings; Dwellings; Manufactories; Cemeteries, including the explanation and drawing of Plans.
   3. *Sanitary Law and Vital Statistics.*

3. Meetings for both Examinations shall be held annually in April and October. The first Examination shall be held on the second Tuesday of the month, and shall occupy one day; the second Examination on the Wednesday of the same week, and shall occupy one day.

4. Candidates may enter for both Examinations in the same week, or for one only.

5. The Examinations must be passed in their order, first and second.

6. A Candidate remitted at his second Examination will be allowed to come up again after a further period of six months.

III.—FEES.

1. The fees for Examinations must be paid at least a week before the day of Examination.

2. The whole charges by the College for the certificate amount to Ten Guineas.

3. The fee for the first Examination is Five Guineas; and the fee for the second Examination is Five Guineas.

4. Candidates forfeit the fee for the Examination which they have been unsuccessful in passing.

5. If a Candidate who has offered himself for both Examinations fail to pass the first, he shall not be allowed to present himself for the second, and his fee for the second shall be returned to him.

Edinburgh, August 2nd, 1886. G. A. GIBSON, M.D., Hon. Secretary.

Post-Graduate Course in Edinburgh.—

It has now been definitely arranged that this Course shall be held during the last week of September (commencing on Monday, the 27th), and during the two first weeks of October.

All the Members of the Medical and Surgical Staff of the following Institutions have agreed to take part in it—viz., the Royal Infirmary, the Royal Hospital for Sick Children, the Royal Asylum, Morningside, the Dental Hospital, and the Throat and Ear Hospital.

Gentlemen who desire to attend the Course, but who have not yet intimated their wish to do so, are earnestly requested to communicate their intention, AT ONCE, to either of the Secretaries, Dr. MUIRHEAD or Professor CHIENE (Charlotte-square), in order that the final arrangements may be completed.

This Course is open to all Practitioners of Medicine.

University of Edinburgh.

SESSION 1886-87.

Principal—Sir WILLIAM MUIR, K.C.S.I., D.C.L., LL.D., &c.

The SESSION will be opened on Tuesday, October 19th, 1886, at 2 P.M., with an Address by the Principal.

The Classes for the different Branches of Study will be opened as follows, and will meet daily (Saturdays excepted), unless otherwise specified.

MEDICINE.

Dean—Professor THOMAS R. FRASER, M.D.

Classes.	*Days of Opening and Hours of Attendance.*	*Professors.*
Practice of Physic	Wed., Oct. 20, 9	Prof. Grainger Stewart, M.D.
Chemistry	Wed., Oct. 20, 10	Prof. Crum Brown, M.D.
Surgery	Wed., Oct. 20, 10	Prof. Chiene, M.D.
Institutes of Medicine or Physiology	Wed., Oct. 20, 11	Prof. Rutherford, M.D.
Practical Physiology	Fri., Oct. 22, 9	
Midwifery and Diseases of Women and Children ...	Wed., Oct. 20, 11	Prof. Simpson, M.D.
Clinical Surgery (Royal Infirmary, Monday and Thursday)	Thurs., Oct. 21, 12 ...	Prof. Annandale, M.D.
Clinical Medicine (Royal Infirmary, Tuesday and Friday)	Fri., Oct. 22, 12 to 2 ...	Profs. Grainger Stewart, T. R. Fraser, and Greenfield; and Prof. Simpson on Diseases of Women.
Anatomy	Wed., Oct. 20, 1	Prof. Sir William Turner, M.B.
Practical Anatomy	Mon., Oct. 4, Daily ...	Prof. Sir William
Anatomical Demonstrations	Wed., Oct. 20, 4	Turner and Demonstrators.
Materia Medica	Wed., Oct. 20, 2	Prof. T. R. Fraser, M.D.
Practical Materia Medica (including Pharmacy) ...	Wed., Oct. 20, 10	
Practical Chemistry	Wed., Jan. 5, 2	Prof. Crum Brown.
General Pathology	Wed., Oct. 20, 3	Prof. Greenfield, M.D.
Practical Pathology	Wed., Oct. 20, Daily ...	
Botany (given in Summer Session)	... ...	Prof. Dickson, M.D.
Medical Jurisprudence (given in Summer Session)	... ...	Prof. Sir Douglas Maclagan.
Natural History	Wed., Oct. 20, 2	Prof. Ewart, M.D.
Practical Natural History	Wed., Oct. 20, 11	
Mental Diseases (given in Summer Session)	... ...	LECTURERS. T. S. Clouston, M.D.
Diseases of the Eye (given in Summer Session) ...	... ...	Douglas Argyll Robertson, M.D.
Clinical Instruction on Diseases of Children at Royal Hospital for Sick Children	Mon., Nov. 1, 10 ...	James Andrew, M.D. and James Carmichael, M.D.
Comparative Embryology	Tues., Nov. 2, 3	George Brook, 4, Morningside-place.
The Philosophy of Natural History	Nov.	G. J. Romanes, M.A.

ROYAL INFIRMARY at Noon, Daily.

The Classes in the Faculty of Medicine, except Botany, Natural History, Clinical Medicine, and Clinical Surgery, will meet in the University New Buildings.

The following means are afforded for Practical Instruction:—

WINTER AND SUMMER SESSIONS.

Practical Anatomy, under the superintendence of Professor Sir William Turner.

Anatomical Demonstrations, under the Superintendence of Professor Sir William Turner.

Anatomical Museum, under the superintendence of Professor Sir William Turner.

Practical Chemistry, under the superintendence of Professor Crum Brown.

Practical Physiology, under the superintendence of Professor Rutherford.

Practical Materia Medica, including Pharmacy, under the superintendence of Professor Thomas R. Fraser.

Morbid Anatomy and Practical Pathology, under the superintendence of Professor Greenfield.

Tutorial Class of Clinical Medicine, in the Royal Infirmary, under the superintendence of the Clinical Professors.

Tutorial Class of Clinical Surgery, in the Infirmary, under the superintendence of Professor Annandale.

Tutorial Class of Practice of Physic, under the superintendence of Professor Grainger Stewart.

Obstetrical and Gynæcological Operations, under the superintendence of Professor Simpson.

Chemical Laboratory, under the superintendence of Professor Crum Brown.

Public Health Laboratory, under the superintendence of Professor Sir Douglas Maclagan.

Physiological Laboratory and Museum, under the superintendence of Professor Rutherford.

Pathological Laboratory, under the superintendence of Professor Greenfield.

Natural History Laboratory, under the superintendence of Professor Ewart.

Royal Botanic Garden, Herbarium, Museum, and Laboratory, under the superintendence of Professor Dickson.

Materia Medica Museum and Laboratory, under the superintendence of Professor Thomas R. Fraser.

Surgical Laboratory and Museum, under the superintendence of Professor Chiene.

WINTER.

Bandaging and Surgical Appliances, under the superintendence of Professor Chiene.

SUMMER.

Practical Botany and Vegetable Histology, under the superintendence of Professor Dickson.

Practical Natural History, under the superintendence of Professor Ewart.

Operative Surgery and Surgical Appliances, under the superintendence of Professor Chiene.

Practical Materia Medica and Pharmacy, under the superintendence of Professor Thomas R. Fraser.

The Preliminary Examinations in Arts, for Degrees in Medicine, &c., commence on 5th October and 8th March.

The Classes will meet for the last time before the Christmas holidays on Wednesday, December 22nd, and will re-assemble for the first time after the Christmas holidays on Wednesday, January 5th.

The Classes in the Faculty of Medicine will close on Friday, 25th March.

Graduation Ceremonial in Medicine, &c., Monday, 1st August, 1887.

During the SUMMER SESSION Lectures will be given on the following subjects:—

Botany and Vegetable Histology, by Professor Dickson.

Medical Jurisprudence, for Students of Law and Medicine, by Professor Sir Douglas Maclagan.

Clinical Medicine, by Professors Grainger Stewart, T. R. Fraser, and Greenfield, and by Professor Simpson (on Diseases of Women).

Clinical Surgery, by Professor Annandale.

Chemistry (Advanced Class), by Professor Crum Brown.

Natural History, by Professor Ewart.

Operative Surgery, by Professor Chiene.

Anatomical Demonstrations, by Professor Sir William Turner, and David Hepburn, M.B.

Medical Psychology and Mental Diseases, with Practical Instruction at the Royal Edinburgh Asylum, by the Physician-Superintendent, Thomas S. Clouston, M.D.

Diseases of the Eye, by D. Argyll Robertson, M.D.

Clinical Instruction in Diseases of Children at Royal Hospital for Sick Children, by James Andrew, M.D., and James Carmichael, M.D.

Comparative Embryology, by George Brook.

Philosophy of Natural History, by G. J. Romanes, M.A.

MATRICULATION.—Every Student, before entering with any Professor, must produce a Matriculation Ticket for the current Session. Tickets will be issued at the Matriculation Office at the University, every lawful day, on and after 4th October, from 10 till 4 o'clock, except on Saturdays, when the office will be closed at 1. Enrolment in the General Album is the only legal record of attendance in the University.

The Students' Reading Library, in the University New Buildings, will be open daily, from 9 A.M. to 5 P.M., except on Saturdays, when it will be closed at 12 noon.

Information relative to Matriculation and the Curricula of Study for Degrees, Examinations, &c. &c., in the Faculties of Arts, Divinity, and Law, may be obtained on application to the Deans of the respective Faculties, or at the Secretary's Office; and, in the Faculty of Medicine, to the Dean. Full details are also given in the University Calendar, published by James Thin, 55, South Bridge.

By Authority of the Senatus.

Sept., 1886. JOHN KIRKPATRICK, Sec. Sen. Acad.

Royal College of Physicians of EDINBURGH.

REGULATIONS FOR THE LICENCE.

1. The College will grant its Single Qualification in Medicine to Candidates who already possess a recognised British or Irish Qualification in Surgery.

2. Candidates will be required to pass a written and oral Examination before the Examining Board of the College in Medicine, Clinical Medicine, Materia Medica, Midwifery, and Medical Jurisprudence.

3. The Examinations will be held on the first Wednesday and succeeding days of every month, except September and October.

4. No one is admissible to Examination who has within the previous three months been rejected by any Licensing Board, and every Candidate is required to sign and send in, along with his certificates, a declaration stating that he has not been rejected within that period.

5. The Fee for the Licence is Fifteen Guineas. In the event of a Candidate being unsuccessful the sum of Six Guineas will be retained; and this Regulation will also apply to cases in which the Candidate may have been previously rejected on one or more occasions.

6. Candidates may be admitted to Special Examination on days other than those appointed above, on bringing forward reasons satisfactory to the Council, and on paying an extra fee of Five Guineas. Should the Candidate be unsuccessful the sum of Eleven Guineas will be returned to him.

7. All Candidates for Examination are required to communicate with the Secretary to the College not less than eight days before the date of the Examination at which they propose to appear, and the fees must be lodged with the Secretary at *least four days* before the date of the Examination.

G. A. GIBSON, M.D., Hon. Secretary.

Edinburgh, 2nd August, 1886.

Laryngology and Rhinology, and the CLINICAL EXAMINATION of the SPUTUM.—Dr. HUNTER MACKENZIE will give a Post-Graduate Course of Practical Instruction in the above subjects to a limited number at the Eye, Ear, and Throat Hospital, Cambridge-street, Edinburgh, commencing on Tuesday, Sept. 21st, at 4 P.M., and extending to the end of October. Qualified Practitioners desirous of attending are requested to communicate with Dr. Mackenzie, from whom a Syllabus of the Course may be obtained.—1, Northumberland-street, Edinburgh.

Edinburgh.—Medical Students and Others.—A Physician, residing in a healthy locality within a short distance of the University and Hospitals, can Receive one or two Medical or other Students or Private Parties to Board during the winter session, commencing in October. Studies regulated, and an insight into the routine of general Medical Practice afforded.—Address, Physician, care of Messrs. Robertson & Scott, Advertising Agents, 13, Hanover-street, Edinburgh.

University of Aberdeen.

SESSION 1886-87.

Chancellor—DUKE of RICHMOND and GORDON, K.G., D.C.L.
Lord Rector—ALEXANDER BAIN, LL.D.
Vice-Chancellor and Principal—WILLIAM DUGUID GEDDES, LL.D.

I.—FACULTY OF ARTS.

The SESSION commences on Wednesday, October 27th, 1886, and closes on Saturday, April 1st, 1887.

Junior Greek—Prof. Harrower, M.A., and Assistant. 9 to 10 A.M., and 11½ A.M. to 12½ P.M. Class fee, £3 3s.
Senior Greek—Prof. Harrower, M.A., and Assistant. 10 to 11 A.M. £2 2s.
Junior Latin—Prof. Ramsay, M.A., and Assistant. 10 to 11 A.M., and 12½ to 1½ P.M. £3 3s.
Senior Latin—Prof. Ramsay and Assistant. 11½ A.M. to 12½ P.M., £2 2s.
English Language and Composition—Prof. Minto, M.A. 1½ to 2½ P.M. on Monday, Wednesday, and Friday. £1 1s.
Logic—Prof. Minto, M.A. 11½ A.M. to 12½ P.M. on Tuesday and Thursday; 12½ to 1½ P.M. daily. £3 3s.
Junior Mathematics—Prof. Pirie, M.A., and Assistant. 9 to 10 A.M., and 12½ to 1½ P.M. £3 3s.
Senior Mathematics—Prof. Pirie, M.A., and Assistant. 10 to 11 A.M. £2 2s.
Junior Natural Philosophy—Prof. Niven, M.A., D.Sc., and Assistant. 9 to 10 A.M. daily; 11½ A.M. to 12½ P.M. on Monday, Wednesday, and Friday. £3 3s.
Senior Natural Philosophy. Div. I.—Prof. Niven, M.A., D.Sc., and Assistant. 10 to 11 A.M. on Monday, Wednesday, and Friday. £1 1s.
Ditto, ditto, Div. II.—Prof. Niven, and Assistant. 10 to 11 A.M. daily. £2 2s.
Ditto, Practical Class—Prof. Niven, M.A., D.Sc., and Assistant. 11½ A.M. to 12½ P.M. on Tuesdays and Thursdays.
Moral Philosophy—Prof. Fyfe, M.A. 9 to 10 A.M. daily; and 11½ A.M. to 12½ P.M. on Monday, Wednesday, and Friday. £3 3s.
Natural History—Prof. Alleyne Nicholson, M.D., D.Sc. 2 to 3 P.M. £3 3s.

The fee for Students taking a Senior Class in any subject, without previous attendance on the Junior Class in the same subject, is £3 3s. Matriculation fee, £1. For the degree of M.A., £1 1s. for each of three examinations, and £1 for General Council Registration.

The course of study for the degree of M.A. embraces two years' attendance on Greek, Latin, and Mathematics, and one on English Literature, Natural Philosophy, Logic, Moral Philosophy, and Natural History. Any Student who, at the time of his entrance to the University, shall, on examination, be found qualified to attend the Higher Classes of Latin, Greek, and Mathematics, or any of them, shall be admitted to such Higher Class or Classes without having attended the first or Junior Class or Classes.

BURSARIES.

The Bursary competition will begin on Thursday, October 14th, at 2 P.M.

Competitors will each, on application, receive from the Sacrist, University Buildings, Old Aberdeen, on and after Tuesday, the 5th October, a printed Schedule, which they are required to fill up and return to him not later than 2 P.M. on Tuesday, the 12th October, not, as in former years, on Saturday.

There will be offered 49 Bursaries, of which 36 are in the patronage of the University, and 13 in that of the Magistrates and Town Council of Aberdeen. All but 6 are open without restriction. They are tenable for four years of the curriculum, and are of the following annual values, viz.:—One of £35; four of £30; one of £25; two of £21; nine of £20; three of £18; three of £16; nine of £15; one of £14 10s.; three of £14; two of £13; nine of £10; and two of inferior value.

A Greenskares Bursary of £30, as also separately advertised, is included in the above.

Candidates are required, at least one month before the competition, to give the Secretary written intimation of the subjects selected by them, under Division II. of the Subjects of Examination. See "University Calendar."

Candidates are requested to bring with them certificates of their age, to be produced, if required, when the result of the examination is intimated.

Candidates for the Macpherson Bursaries of £20 are requested to lodge with the Secretary, on or before the 12th October, certificates from a Gaelic Minister as to their knowledge of the Gaelic language.

Candidates for restricted Bursaries must transmit to the Secretary, on or before the Saturday previous to the competition, Certificates that they fulfil the conditions of the Bursary.

The Bursaries will be assigned in the University Buildings, Old Aberdeen, on Saturday, 23rd October, at 2 P.M.; only competitors whose names are in the Order of Merit, or their representatives, being allowed to be present. Any competitor not appearing personally, or by representative, to accept a Bursary when offered to him shall be held as declining, and the Bursary so offered to him will fall to the next in order qualified for it.

Of Bursaries under private patronage, 18 were vacant at the close of the last Session, of the following annual values, viz.:—Five of £40; one of £30; one of £25; one of £21; three of £22 10s.; one of £18 16s.; two of £15; one of £14; one of £13 10s.; one of £12; and one of £11.

Presentees to these Bursaries will be examined on Saturday, the 16th October; and they must give notice and hand their Presentations to the Secretary not later than Tuesday, 12th October.

OTHER EXAMINATIONS.

For passing from Junior to Senior Classes of Latin, Greek, and Mathematics, on Saturday, the 23rd October, at 10 A.M. and 3 P.M.

For passing over the Junior Mathematical Class, on Saturday, the 23rd October, at 10 A.M.

For passing over the Junior Latin or Greek Classes, on Monday, the 25th October, at 10 A.M.

[Students intending to come forward for either of the three last-mentioned examinations are required to give in their names to the Secretary of the Faculty not later than the preceding day.]

For the degree of M.A., on the 23rd, 25th, 26th, 27th, 28th, and 29th October.

CLASS AND SPECIAL PRIZES.

Books of the value of £136 are awarded to the Students most distinguished in the Class Examinations. At the close of the curriculum the best Greek and Mathematical Scholars are entitled each to a Simpson Prize of £65 or thereby, the second in point of merit in Mathematics to a Boxill of £26, the best Latin Scholar to the Dr. Black Prize of £25 or thereby, the best scholar in Classical Literature and Mental Philosophy to the Hutton of £30, the best general Scholar to the Gold Medal of the Magistrates and Town Council of Aberdeen, the most distinguished candidate for Honours in the department of Natural Science to a prize of £10, the greatest proficient in Experimental Physics to the Neil Arnott Scholarship of £35 or thereby, the best English and Latin Scholars each to a Senfield Gold Medal, the best Student of the year who shall take First Class Honours in the department of Mental Philosophy to the Bain Gold Medal, and (in January, 1887) the best Student in the Tertian or Magistrand Class in the department of Classical Philology the Jenkyns Prize of £8.

SCHOLARSHIPS.

Masters of Arts of less than two years' standing may compete in December, 1886, for the Fullerton &c. Scholarships, which are now of the following values—viz.: One for Classics and one for Mental Philosophy, each of the annual value of £100, tenable for two years; and one for Mathematics, of the annual value of £75, tenable for three years; and Masters of Arts, if of under three years' standing, are eligible for the Murray Scholarship of £70, tenable for three years.

II.—FACULTY OF MEDICINE.

WINTER SESSION, commencing on Wednesday, 20th October, 1886.

Anatomy—Professor Struthers, M.D. 11 A.M. £3 3s.
Practical Anatomy and Demonstrations—Professor Struthers, M.D., and Assistant. 9 to 4, and 9 A.M. £2 2s.
Chemistry—Professor Brazier, F.C.S. 3 P.M. £3 3s.
Institutes of Medicine—Professor McWilliam, M.D. 2 P.M. £3 3s.
Surgery—Professor Alex. Ogston, C.M., M.D. 10 A.M. £3 3s.
Practical Surgery—Professor Alex. Ogston, C.M., M.D. 5 P.M.*
Practice of Medicine—Professor Smith-Shand, M.D. 3 P.M. £3 3s.
Midwifery and Diseases of Women and Children—Professor Stephenson, M.D., F.R.C.S.E. 4 P.M. £3 3s.
Natural History—Professor Alleyne Nicholson, M.D., D.Sc., F.L.S. 2 P.M. £3 3s.
Materia Medica—Professor Dyce Davidson, M.A., M.D. 4 P.M. £3 3s.
Practical Physiology—Professor McWilliam, M.D. £3 3s.
Pathological Anatomy (Sir Erasmus Wilson Chair).—Professor Hamilton, M.B., F.R.C.S.E. 9 P.M. £3 3s.
Practical Class—Professor Hamilton, M.B. £3 3s.

* Free to Students in Surgery.

SUMMER SESSION, commencing on Monday, 25th April, 1887.

Botany—Professor James W. H. Trail, M.A., M.D., F.L.S. 8 A.M. £3 3s.
Practical Botany—Professor James W. H. Trail.
Practical Pharmacy—Professor Dyce Davidson and Assistant. 4 P.M. £2 2s.
Practical Anatomy and Demonstrations—Professor Struthers, M.D., and Assistant. 9 to 4, and 9 A.M. £2 2s.
Practical Chemistry—Professor Brazier, F.C.S., and Assistant. 10 A.M. to 2 P.M. £3 3s.
Practical Physiology—Professor McWilliam, M.D. 2 P.M. £3 3s.
Natural History—Professor Alleyne Nicholson, M.D. 2 P.M. £3 3s.
Practical Natural History—Professor Alleyne Nicholson, M.D. 3 to 5 P.M. £3 3s.
Operative Surgery—Professor Alexander Ogston, C.M., M.D. 10 A.M. £2 2s.
Practical Midwifery and Gynæcology, and Clinical Diseases of Children—Professor Stephenson, M.D., F.R.C.S.E. 11 A.M. £2 2s.
Practical Pathological Anatomy—Professor Hamilton, M.B. 11 A.M. £3 3s.
Medical Logic and Medical Jurisprudence—Professor Matthew Hay, M.D. 9 A.M. £3 3s.
Practical Medical Jurisprudence and Hygiene—Professor Matthew Hay, M.D. £2 2s.

The Anatomical Course in Summer includes Instruction in Histology and in the Use of the Microscope, and Instruction in Osteology for Beginners.

Matriculation Fee (including all dues) for the Winter and Summer Sessions, £1. For the Summer Session alone, 10s.

The following additional Courses of Practical Instruction are delivered in the University or at the Institutions mentioned.

Practical Ophthalmology—Prof. A. D. Davidson. £1 1s.
Dental Surgery—Dr. Williamson. £1 1s.
Insanity—Dr. Reid, Royal Lunatic Asylum. £1 1s.
Diseases of the Ear and Larynx—Dr. McKenzie Booth, Dispensary. £1 1s.
Diseases of the Skin—Dr. Garden, Royal Infirmary and Sick Children's Hospital. £1 1s.
Royal Infirmary: Daily at noon. Perpetual fee to Hospital Practice, £6; or, first year, £3 10s.; second year, £3.
Clinical Medicine—Drs. Smith-Shand, Beveridge, and A. Fraser. £3 3s. Mondays and Thursdays, 1 P.M.
Clinical Surgery—Drs. A. Ogston, Ogilvie Will, and Garden. £3 3s. Tuesdays and Fridays, 1 P.M.
Pathological Demonstrations at the Hospital in Winter—Dr. Bodger.
Sick Children's Hospital. Daily at 11 A.M.
General Dispensary and Lying-in and Vaccine Institution: Daily, 10 A.M.
Eye Institution: Daily, 2.30 P.M.
Royal Lunatic Asylum: Physicians—Drs. Jamieson and Reid.

The Regulations relative to the Registration of Students of Medicine and the granting of Degrees in Medicine and Surgery may be had of J. Collie Smith, the Secretary to the Faculty of Medicine.

BURSARIES.

There will be offered for competition in this Faculty, within the University Buildings in Aberdeen, on a date early in November, 1886, to be fixed by the Faculty, the following Bursaries:—(1) To Students entering their First Winter Session who have passed all the Subjects imperative for registration in Medicine, Two Bursaries of £20 each, tenable for four years, and one of £20 or thereby, open to those who have passed through the Arts Classes of the University. (2) To Students about to commence their Second Winter Session at Medicine, Two of £25 each or thereby, Two of £22 10s. each, Two of £20, One of £15 15s.; and (3) to Students about to commence their Third Winter Session, One of £20, tenable for two years. For Subjects of Examination see "The University Calendar."

August, 1886. WM. MILLIGAN, Secretary.

N.B.—Further particulars, including information as to Faculties of Divinity and Law, are to be found in "The University Calendar," published by A. King and Co., Printers to the University, Aberdeen, price 2s., or 2s. 4d. by post.

SUMMER SESSION, 1887.

On Monday, 2nd May, the Lectures will commence.

The minimum cost of the Education in this School of Medicine for the TRIPLE QUALIFICATION of PHYSICIAN and SURGEON from the ROYAL COLLEGES of PHYSICIANS and SURGEONS of EDINBURGH, and the FACULTY of PHYSICIANS and SURGEONS of GLASGOW, including the Fees for the Joint Examinations, is £100, which is payable by yearly instalments during the period of study.

STEVENSON MACADAM, Secretary.

A detailed Prospectus of the Classes will be forwarded on application to the Secretary, whose address is Surgeons' Hall, Edinburgh.

Royal (Dick's) Veterinary College,

Clyde-street, Edinburgh.

Founded by the late Professor DICK in 1823.

Trustees—Lord Provost, Magistrates, and Council of the City of Edinburgh.

Principal—Professor Thomas Walley, M.R.C.V.S.

Winter Session commences on October 27th.

Preliminary Examination, October 25th and 26th.

Prospectuses and full particulars on application.

Classes open to Amateurs.

Royal Infirmary, Edinburgh.—In this

Hospital a portion of the beds is set apart for Clinical Instruction by the Professors of the University of Edinburgh. Courses of Clinical Medicine and Surgery are also given by the ordinary Physicians and Surgeons. Special Instruction is given in the Medical Department on the Diseases of Women, of the Skin, Physical Diagnosis, &c., and in the Surgical Department on Diseases of the Eye, the Ear, and the Larynx. Separate Wards are devoted to Venereal Diseases, Diseases of Women, Diseases of the Eye; also to cases of Incidental Delirium or Insanity. Post-mortem Examinations are conducted in the Anatomical Theatre by the Pathologists, who also give Practical Instruction in Pathological Anatomy and Histology.

MEDICAL DEPARTMENT.

Consulting Physicians—Dr. D. B. Haldane, Dr. George W. Balfour, Professor Sir Douglas Maclagan.
Consulting Physician for Diseases of Women—Dr. Alexander Keiller.
Professors of Clinical Medicine—Dr. Alexander R. Simpson, Dr. T. Grainger Stewart, Dr. T. R. Fraser, Dr. W. S. Greenfield.
Ordinary Physicians and Lecturers on Clinical Medicine—Dr. Claud Muirhead, Dr. David J. Brakenridge, Dr. John Wylie, Dr. J. O. Affleck.
Extra Physician and Lecturer on Diseases peculiar to Women—Dr. J. Halliday Croom.
Assistant-Physicians—Dr. Andrew Smart, Dr. Alexander James, Dr. Byrom Bramwell.
Extra Assistant-Physicians for Diseases of Women—Dr. D. Berry Hart, Dr. A. H. F. Barbour.
Extra Physician for Diseases of the Skin—Dr. Allan Jamieson.

SURGICAL DEPARTMENT.

Consulting Surgeons—Dr. Dunsmure, Dr. J. D. Gillespie.
Professor of Clinical Surgery—Mr. Annandale.
Professor of Surgery—Mr. Chiene.
Ordinary Surgeons—Mr. Joseph Bell, Mr. John Duncan, Mr. A. G. Miller.
Ophthalmic Surgeons—Dr. Argyll Robertson, Mr. George A. Berry.
Extra Surgeon for Treatment of Ovarian Diseases—Dr. Thomas Keith.
Extra Surgeon—Dr. P. H. Watson.
Assistant-Surgeons—Dr. P. H. Maclaren, Dr. C. W. MacGillivray, Mr. J. M. Cotterill, Mr. Charles W. Cathcart, Mr. Francis M. Caird.
Assistant-Surgeon for Treatment of Ovarian Diseases—Mr. Skene Keith.
Dental Surgeon—Dr. John Smith.
Surgeon to the Ear and Throat Department—Dr. P. McBride.
Pathologists—Dr. G. Sims Woodhead, Mr. Alexander Bruce.

HOSPITAL TICKETS.—Perpetual Ticket, in one payment, £12; Annual Ticket, £6 6s.; Six Months, £3 4s.; Three Months, £2 2s.; One Month, £1 1s. Separate payments, amounting to £13 13s., entitle the Student to a Perpetual Ticket on production of previous Season Tickets.

APPOINTMENTS.

No fees are charged for any Medical or Surgical Appointments in this Hospital, which are as follows:—

1. Resident Physicians and Surgeons, who must be registered as legally qualified Practitioners, are from time to time appointed by the Managers on the recommendation of the Physicians and Surgeons. The holders of these offices live in the house free of charge. The appointment is for six months, but may be renewed at the end of that period by special recommendation.

2. Special Non-resident Clinical Clerks, who must also be registered as legally qualified Practitioners, are appointed by the Managers on the recommendation of the Physicians and Surgeons, for such periods and under such conditions as may be deemed expedient.

3. Clerks and Dressers are appointed by the Physicians and Surgeons. These appointments are open to all Students and Junior Practitioners holding Hospital Tickets.

4. Assistants in the Pathological Department are appointed by the Pathologists.

JAMES S. TRAINER, Treasurer and Clerk.

Glasgow Western Medical School.—

Within one minute of the University, and four minutes oft he Western Infirmary.

The Lectures of this School qualify for the University of Glasgow, in accordance with its regulations; the Faculty of Physicians and Surgeons, Glasgow; the Royal Colleges of Physicians and Surgeons, Edinburgh, London, Dublin; and the Apothecaries' Societies.

FEES.—Each course (except Anatomy), first session, £2 2s.; second session, £1 1s.; Anatomy, £3 3s.; Practical Anatomy, £1 1s.

Students of this School receive hospital instruction at the Western Infirmary.

Session begins October 26th, 1886.

For particulars, apply to Mr. J. T. Carter, at the School, University-avenue.

Anderson's College, Glasgow.—The

WINTER MEDICAL SESSION will be opened on Tuesday, 26th October, 1886, with an Introductory Address by Dr. WOLFE, Lecturer on Ophthalmic Medicine and Surgery. Lectures are delivered on the following subjects:—Anatomy, Dr. A. M. Buchanan; Chemistry, Mr. Dittmar; Physiology, Dr. Christie; Surgery, Dr. Dunlop; Practice of Medicine, Dr. Gemmell; Materia Medica, Dr. Morton; Midwifery (in summer), Dr. A. Wallace; Medical Jurisprudence (in summer), Dr. Lindsay; Botany (in summer), Mr. Wilson; Ophthalmic Surgery, Dr. Wolfe; Public Health (in summer), Dr. Christie; Aural Surgery (in summer), Dr. Barr. Hospital Practice and Clinical Lectures in Glasgow Royal Infirmary. The above Lectures qualify for all the Licensing Boards in the United Kingdom. Fees: First Course, £2 2s.; Second do., £1 1s.; afterwards free. The fees for all the Lectures and Hospital Practice required for the conjoint qualifications granted by the Royal Colleges of Physicians and Surgeons, Edinburgh, and the Faculty of Physicians and Surgeons, Glasgow, amount to £48. A Calendar may be obtained from Dr. A. M. Buchanan, 98, St. George's-road, Glasgow, Dean of the Medical Faculty.

Digitized by Google

Glasgow Western Infirmary.

IN-DOOR DEPARTMENT.

This Hospital contains upwards of 400 Beds, and there are special wards for Diseases of Women and for Diseases of the Skin.

Students are enrolled for attendance in the Clinical Classes of any of the Physicians or Surgeons, instruction being given by Clinical Lectures and Demonstrations on specified days in each clinique. The visit hour is 9 A.M. daily.

The Clinical Lectures of the Physicians and Surgeons are recognised as qualifying for Graduation at the Glasgow University and other boards.

Visiting Physicians—Dr. W. T. Gairdner, Dr. M'Call Anderson, Dr. Jas. Finlayson, Dr. Gavin P. Tennent.

Visiting Surgeons—Dr. G. H. B. Macleod, Dr. George Buchanan, Dr. Alex. Patterson, Dr. Hector C. Cameron.

Assistant-Physicians—Dr. Joseph Coats, Dr. James Christie, Dr. D. C. M'Vail.

The Pathological Department is under the charge of Dr. Joseph Coats, Pathologist and Assistant-Physician to the Infirmary, who makes the post-mortem examinations, gives pathological demonstrations, and conducts a Class of Pathology in the Infirmary at 3 P.M. in the Winter Session, and he has a Class of Practical Pathology during the Summer. There is a Museum connected with this department, a catalogue of which is in course of preparation. Dr. C. O. Hawthorn is attached to this department as Pathological Chemist.

The Ward for Diseases of Women is under the care of Dr. Leishman, who visits on Tuesdays and Fridays at 3 P.M.

The Skin Wards are under the care of Dr. M'Call Anderson, the visit hour being the same as for the General Hospital.

OUT-PATIENT DEPARTMENT.

Dispensary Physicians—Dr. W. G. Dun, Dr. Samson Gemmell, Dr. John Alexander. Extra Dispensary Physicians—Dr. R. S. Thomson, Dr. G. Dickson.

Dispensary Surgeons—Dr. J. C. Renton, Dr. Geo. T. Beatson, Dr. David Newman. Extra Dispensary Surgeons—Dr. Maylard and Dr. James Parker.

Out-patients are seen daily at 2 P.M. by the Dispensary Physicians and Surgeons, and the students are admitted to see the practice, receive instruction, and assist at the dressing of cases, &c. Total number of patients last year in this department, 18,990.

Out-patient Department for Diseases of Women: Advice is given on Tuesdays and Fridays at 3 P.M. by Dr. W. L. Reid. Total number of patients last year, 1386.

The Midwifery Department is for attendance on patients at their own homes by Students connected with the Infirmary.

Consulting Physician-Accoucheur—Dr. Wm. Leishman. Out-door Physicians-Accoucheur—Dr. W. L. Reid, Dr. Robt. Kirk, and Dr. Murdoch Cameron.

The Department for Diseases of the Throat is at present under the charge of Dr. J. Alexander. Advice is given on Wednesdays at 11 A.M. Total number of patients last year, 647.

Aural Department: Dr. Thomas Barr gives advice on Wednesdays and Saturdays at 3.30 P.M., and Practical Instruction and Lectures, as arranged, on other days. Total number of patients last year, 1088.

Dental Department: Mr. J. R. Brownlie, Dentist. Advice on Mondays and Thursdays at 4.30 P.M. Total number of patients last year, 600.

Vaccination on Mondays at 1 P.M., by Dr. D. C. M'Vail, who also gives instruction and officially recognised certificates. Total cases last year, 727.

There are eight Resident Assistants in the Infirmary, one being attached to the wards of each of the Physicians and Surgeons. They are appointed at the beginning of each winter session from those who have completed their course. Clinical Clerks and Dressers are appointed by the Physicians and Surgeons from those attending their cliniques.

Fees: 20 guineas for a life ticket, admitting to the Infirmary and to the various courses of Clinical Instruction; or the fee may be paid in two equal instalments during the first and second years. Fee for six months, 7 guineas; and for three months, 4 guineas.

Further information may be obtained by applying to Dr. A. W. RUSSELL, Superintendent.

Queen's College, Cork. — Faculty of MEDICINE.

PROFESSORS.

Anatomy and Physiology—J. J. Charles, M.A., D.Sc., M.D., M.Ch.
Practice of Medicine—D. C. O'Connor, LL.D., M.D.
Surgery—Stephen O'Sullivan, M.D., M.Ch., F.R.C.S.I.
Materia Medica—C. Yelverton Pearson, M.D., M.Ch.
Midwifery—Henry Corby, B.A., M.D., M.Ch.
Chemistry and Practical Chemistry—Maxwell Simpson, LL.D., D.Sc., M.D., F.R.S.
Zoology and Botany—Marcus M. Hartog, M.A., D.Sc., F.L.S.
Modern Languages—Owen O'Ryan, D.Lit.
Logic—Geo. J. Stokes, M.A.
Practical Anatomy—By the Professor, assisted by the Demonstrators, Dr. Cotter, Dr. Hosford.

A Matriculation Examination, for such Students as may require to pass it (see Regulations, page 40), will be held on Oct. 19th.

The Lectures will commence on the 1st of November. Eight Scholarships will be awarded to Students in Medicine if qualified—viz., Two Junior Scholarships of £25 each, to Students commencing their first, second, third, and fourth years.

Clinical Medicine and Surgery at the North and South Infirmaries, and Clinical Midwifery at the Lying-in Hospital.

The Medical Buildings have been considerably enlarged by the addition of a Lecture-room, Laboratory, and Museum for the Materia Medica and Medical Jurisprudence Classes, by the extension to double its size of the Dissecting-room, and by the addition of a large Anatomical and Pathological Museum.

By order of the President.
ALEX JACK, M.A., Registrar.

Faculty of Physicians and Surgeons of GLASGOW.

Copies of the following Regulations may be had on application to the Secretary:—

1. Regulations regarding the Preliminary Examination.
2. Regulations regarding the Licence.
3. Regulations regarding the Fellowship.
4. Regulations regarding the Dental Licence.
5. Regulations regarding the Certificate in Public Health.
6. Regulations regarding the Scottish Triple Qualification.

ALEXANDER DUNCAN, B.A., Secretary.

Faculty Hall, St. Vincent-street, Glasgow.
August, 1886.

University of Glasgow.

SESSION 1886-87.

The MEDICAL SESSION will be opened with an Introductory Discourse by Professor MACLEOD, M.D., on Tuesday, the 26th October, 1886.

WINTER COURSES.

Zoology, 9 A.M.—Professor Young, M.D.
Clinical Medicine, 9 A.M.—Professor M'Call Anderson, M.D., and Professor Gairdner, M.D., LL.D.
Clinical Surgery, 9 A.M.—Professor George Buchanan, M.D., and Professor Macleod, M.D.
Chemistry, 10 A.M.; and Chemical Laboratory, 10 A.M. to 4 P.M.—Professor Ferguson, M.A.
Anatomy, Senior, 11 A.M.; Junior, 2 P.M.; and Practical Anatomy, 9 A.M. to 4 P.M.—Professor Cleland, M.D., D.Sc., LL.D., F.R.S., assisted by J. Yule Mackay, M.D., and other Demonstrators.
Practice of Physic, 11 A.M.—Professor Gairdner, M.D., LL.D.
Materia Medica, 12 noon, and Pharmaceutical Laboratory—Professor Charteris, M.D., and Dr. Napier.
Institutes of Medicine, 12 noon, and Physiological Laboratory—Professor M'Kendrick, M.D., LL.D., F.R.S., assisted by J. M'Gregor Robertson, M.A., M.B., the Muirhead Demonstrator.
Surgery, 1 P.M.—Professor Macleod, M.D.
Midwifery, 2 P.M.—Professor Leishman, M.D.

SUMMER SESSION.

During the Summer Session, which opens on 2nd May, the Courses of Botany (Professor Bower, F.L.S.), Practical Chemistry, Forensic Medicine (Professor Simpson, M.A. Cantab., M.D.), Public Health (Professor Simpson), and Clinical Medicine and Clinical Surgery are given. There are also Courses of Anatomy (Lectures on Embryology), Practical Anatomy, Zoology, Practical Zoology, Vegetable Histology and Practical Botany, Practical Physiology (including Histology), Practical Materia Medica, Practice of Physic, Practical Pathological Histology, Operative Surgery, and Lectures on Diseases of Women.

LECTURERS.

Pathology—The Courses of the Pathologist of the Western Infirmary, Dr. Joseph Coats, and of the Pathologist of the Royal Infirmary are recognised.
Diseases of the Eye—Thomas Reid, M.D., Waltonian Lecturer (Summer Course).
Insanity—Dr. David Yellowlees, Royal Asylum, Gartnavel (Summer Course).

WESTERN INFIRMARY.—This Hospital, near the University, contains 400 beds for Medical and Surgical patients, also Wards for Skin Diseases, and one for Diseases peculiar to Females.

DEGREES.—Three Medical Degrees are conferred—viz.: Bachelor of Medicine (M.B.) and Master of Surgery (C.M.), which must be taken together, and Doctor of Medicine (M.D.); all of which are recognised by the Medical Act as qualifying for practice throughout the British dominions.

COST OF EDUCATION.—The fee for each class is £3 3s., and the total minimum expenses for classes, hospital, and graduation fees for M.B. and C.M. amount to about £90. The fee for M.D. is £15 8s.

BURSARIES.—Bursaries to the annual amount of £1150 may be held by Students during their medical studies.

Full particulars as to the course of education and examination required for the Degrees, and the Preliminary Examination required to be passed by Students before beginning medical study, will be found in the University Calendar (by post 3s.); or a Syllabus of the regulations, fees, &c., may be obtained by applying to Mr. Young, M.A., Matriculation Office.

Royal College of Surgeons in Ireland.

SCHOOL OF SURGERY.

The Dissecting Rooms open Oct. 1st, and the Lectures commence on Monday, Oct. 25th.

Physiology—Prof. Mapother.
Anatomy—Profs. Stoker and Fraser.
Surgery—Profs. Sir W. Stokes and Hamilton.
Medicine—Prof. Foot.
Chemistry—Prof. Sir C. Cameron.
Midwifery—Prof. Roe.
Dentistry—Prof. Stack.

SUMMER SESSION.

Materia Medica—Prof. Macnamara.
Medical Jurisprudence—Prof. Davy.
Botany and Zoology—Prof. Minchin.
Practical Chemistry—Prof. Sir C. Cameron.
Ophthalmic and Aural Surgery—Prof. Jacob.
Practical Physiology—Profs. Mapother and Fraser.
Operative Surgery—Profs. Sir W. Stokes and Hamilton.
Hygiene—Prof. Sir C. Cameron.
Dentistry—Prof. Stack.

Prospectuses will be forwarded on application to the Registrar or any Professor.

Queen's College, Belfast

FACULTY OF MEDICINE.

ANATOMY AND PHYSIOLOGY.—P. Redfern, M.D., F.R.C.S., F.R.U.I.
CHEMISTRY.—E. A. Letts, Ph.D., F.R.S.E., F.C.S.
PRACTICE OF MEDICINE.—James Cuming, M.A., M.D., F.K.Q.C.P.
PRACTICE OF SURGERY.—Vacant.
MATERIA MEDICA.—J. S. Reid, M.D.
MIDWIFERY.—R. F. Dill, M.D.
MEDICAL JURISPRUDENCE.—J. F. Hodges, M.D., F.C.S., F.I.C.
NATURAL PHILOSOPHY.—Joseph D. Everett, M.A., D.C.L., F.R.U.I., F.R.S.
ZOOLOGY AND BOTANY.—Robert O. Cunningham, M.D., F.R.U.I., F.L.S.

The Lectures of the Winter Session of 1886-87 will commence on Tuesday, November 2nd. The Lectures on Botany and Medical Jurisprudence, and the Summer Course of Practical Chemistry, will commence on May 2nd, 1887.

The Anatomical Rooms are open for the whole day, and Students are aided in their Dissections by the Professor of Anatomy and the Demonstrator.

The Examinations for Medical Scholarships, tenable for one year, and of which two are awarded to students in each year of the Medical course, will commence on October 26th.

FEES.—Anatomy and Physiology: 1st course, £3; each subsequent course, £2. Demonstrations and Practical Anatomy: Each course, £3. Practical Physiology and Histology, £3 3s. Practical Chemistry, £3. Other Medical Lectures: 1st course, £2; each subsequent course, £1.

BELFAST ROYAL HOSPITAL.—Clinical Fees: A Winter Session, £5 5s.; a Summer Session, £2 2s.; Perpetual Fee, payable in two instalments, £10 10s. Hospital Fee, half a guinea for each Winter or Summer Session.

ULSTER HOSPITAL FOR DISEASES OF WOMEN AND CHILDREN, AND MIDWIFERY DISPENSARY, 11, Fisherwick-place.—Fee for Winter or Summer, six months, £3 3s.

LYING-IN HOSPITAL.—Fee for six months, £2 2s.

BELFAST DISTRICT LUNATIC ASYLUM.—Fee for Summer Session, £3 3s.

By order of the President.
JOHN PURSER, M.A., Registrar.

DOVER COLLEGE.
Head Master: Rev. W. BELL, M.A.

A high-class Public School on moderate terms. Latest successes are three open Scholarships at Oxford and Cambridge in Classics and Mathematics in 1886; all (four) candidates passed into Sandhurst in 1885. Entrances to Indian Civil Service and Woolwich. Junior school. Excellent music, chapel, library, laboratory, workshop, gymnasium, fives-courts, sea-bathing.

Special classes for Woolwich, Sandhurst, and Army Preliminary.

Each boy has a separate bedroom.

Boarders are taken by the Head Master, by C. H. Sparke, M.A., and E. Thornton Littlewood, M.A.—Apply to the Head Master.

Little St. John's, Ditchling, Sussex.—

A Church of England School, preparatory to the larger ones. Parents will find this school everything to be desired for imparting a sound education, coupled with every attention to health and home comforts. From its situation, it is well suited for delicate children. The boys are all sons of gentlemen; the Clerical and Medical professions affording large patronage. Boys have passed direct into the Navy and other professions from the school, which speaks for the tone of instruction given. The next term begins September 16th. For terms, apply to A. E. Nickoll, Principal.

Appuldurcombe College, Isle of Wight,

for DELICATE BOYS. Noble mansion in magnificent park of 600 acres, ranging from 300 to 700 feet above the sea. Pure, bracing air. Dairy farm. Junior department under married clergyman and a lady. Senior branches separate. Classes for Legal, Medical, and Bar Prelims., and all Government Examinations. Army Coaching Department very successful, for Sandhurst and Woolwich. Junior Army Prelim. class also, fourteen to sixteen. Practical classes also in farming, carpentering, surveying, plan-drawing, bookkeeping, &c., for colonies. Terms moderate.—A. MORSE.

Epsom (Medical) College Preparatory

SCHOOL.—The following boys, under fourteen, who were pupils in the above-named school, have obtained the undermentioned scholarships:—

H. Candler, Repton School, £40 per annum.
R. Bradley, St. Paul's School, £30 per annum.
G. P. O'Connor, Epsom College, £21 per annum.
A. M. Low, Aldenham School, £30 per annum.
(1st of four Platt Scholarships.)

Prospectus on application to J. JEFFREY, Parade, Epsom.

Epsom College, Surrey.—

Head Master—The Rev. W. CECIL WOOD, M.A.

Boys are prepared for the Universities of Oxford, Cambridge, and London, and for the Preliminary Examinations for the Medical and other Professions. Special facilities are afforded for the study of natural science to those preparing for the Matriculation and Preliminary Scientific Examinations at the London University. Seven Medical Scholarships at the hospital schools in London, ranging in value from 90 to 125 guineas, an Exhibition to the Universities of £50 a year for three years, and six Scholarships tenable for a year in the College, are competed for annually.

Inclusive terms, £49 10s. or £52 10s. a year, according to age, for the sons of medical men; £70 a year for others.

The NEXT TERM will BEGIN on the 22nd September.

For particulars, apply to the Secretary of the College, at the office, No. 37, Soho-square, London. ROBERT FREEMAN, Secretary.

DIRECT MEDICAL REPRESENTATION.

TO THE REGISTERED MEDICAL PRACTITIONERS OF SCOTLAND.

Gentlemen,—I have had the honour to receive a numerously-signed requisition to become a Canditate for the Scottish representation in the Medical Council, conferred by the recent Medical Amendment Act. I have agreed to this request, and will take an early opportunity of explaining my views more fully than I can at present. Meantime I shall be glad to have the assurance of your assistance and support, and

I am, Gentlemen, your obedient servant,
WILLIAM BRUCE.

The Castle, Dingwall, September 2nd, 1886.

DIRECT REPRESENTATION ON THE MEDICAL COUNCIL.

TO THE MEMBERS OF THE MEDICAL PROFESSION IN ENGLAND AND WALES.

GENTLEMEN,

I respectfully beg to announce that I shall be a candidate for your support as a direct representative of the profession on the General Council of Medical Education and Registration.

I shall feel extremely obliged to those who are willing to vote for me, if they will send me a post card to that effect.

I remain, Gentlemen,
Your obedient servant,
R. P. B. TAAFFE, M.D., M.S.Lond., F.R.C.S.Eng. (Exam.), L.S.A., San. Sci. Cert. Lond. and Camb.; President of the Section of Public Medicine (at Brighton) British Medical Association; Medical Officer of Health for Brighton.

45, Old Steyne, Brighton, August 30th, 1886.

SCHOOL OF

ANATOMY, PHYSIOLOGY, SURGERY,

and all PROFESSIONAL SUBJECTS. Practically taught by different masters. DISSECTING-ROOM licensed under the Anatomy Act. PHYSIOLOGICAL, CHEMICAL, and PHARMACEUTICAL LABORATORY. MUSEUM of some 300 Medical, Surgical, and Normal Specimens. Prospectus on application to Mr. THOMAS COOKE, F.R.C.S., Senior Assistant-Surgeon to the Westminster Hospital, who conducts the Classes of Anatomy and Surgery. Private address—40, Brunswick-square. Classes in ELEMENTARY ANATOMY and PHYSIOLOGY. Special tuition of an evening for resident pupils.

Chemistry, Materia Medica, Pharmacy,

&c. Classes forming for October. Ample laboratory work.

Operative Surgery.—Recognised by the

London University, War Office, &c., fee £5 5s.

Fellowship of the R.C.S., H.M.'s Services.

Special Classes for the above.

Tablets of Anatomy, by Thomas Cooke,

F.R.C.S., Senior Assistant Surgeon to the Westminster Hospital, 4th ed., revised, now ready, price 7s. 6d. (Longmans & Co.), contain "in the fewest words and plainest language, and in about one-tenth the space, the matter which is found in the most accredited standard works. The author is evidently a sound teacher."—THE LANCET. "Probably no anatomical or physiological work is more universally appreciated."—STUDENT'S JOUR.

King Edward VI.'s School, Berkhamsted,

Herts, twenty-eight miles from Euston. Good Scholarships and Exhibitions. Laboratory, heated Swimming Bath, Fives Courts, Workshops, &c. £52 per annum.—Address, Head Master.

DEFECTS OF SPEECH.

Mr. WILLIAM VAN PRAAGH'S System for the Cure of all Defects of Speech, both ACQUIRED and CONGENITAL.

For information, apply to Mr. William Van Praagh, 11, Fitzroy-square, London, W. Personal interviews by appointment.

STAMMERING, STUTTERING, &c.

DR. ABBOTT'S (Physician, Institution for Affections of the Speech, and author of "Impediments of Speech, their Causes and Cure," Ninth Edition, published by G. Pitman, 140, Gower-street, W.C., price 2s.), now attends daily, from 11 A.M. to 2 P.M., at 61, Margaret-street, Cavendish-square, W. Vacancy for Resident Patient (with educational facilities if required) at private country house.

Deaf and Dumb Children of the

Higher Classes educated on the "Pure Oral" System. Private and select School for limited number. Special home comforts.—Address, Harry W. White (formerly Vice-Principal, Ealing Training College for Teachers of the Deaf), 115, Holland-road, Kensington. Next term, Sept. 20th.

"By this method alone is the intellect of the mute enabled to travel beyond the range of a few who are skilled in the manual sign language, and to converse freely with all."—THE LANCET, July 11th, 1885.

University of London Preliminary

SCIENTIFIC (M.B.) EXAMINATION.—Instruction is given in all the subjects of the above Examination at GUY'S HOSPITAL during the Winter and Summer Sessions. The Class is not confined to Students of the Hospital.—For further particulars apply to the Dean, Guy's Hospital, Southwark, S.E.

DIRECT REPRESENTATION OF THE MEDICAL PROFESSION OF SCOTLAND IN THE GENERAL COUNCIL.

To the Registered Medical Practitioners of Scotland.

GENTLEMEN,—You are aware that the Medical Act, which recently received the Royal assent, empowers you to elect a Member of the General Council.

It would probably not have occurred to me to solicit your suffrages for the honour of representing you had I not been urged to do so by a number of influential friends and neighbours, who, knowing well the attention I have for many years given to medical reform, believe my acquaintance with the events which led up to the passing of the Medical Act of 1886 to be somewhat exceptional. This knowledge was mainly acquired during my seven years' tenure of the Secretaryship of the Forfarshire Medical Association, an association which has always been in the van of progress. After very careful consideration I have decided to become a candidate.

Important business will, from time to time, come before the Council in relation to education and examination. I have long held the opinion that a stringent entrance examination for all students who are not graduates in Arts is one of the best safeguards against the admission to the profession of men who are unsuited by nature and education for its practice. Judicious schemes for the improvement of the professional curriculum and examinations shall at all times have my best attention.

In the periodical revisions of the British Pharmacopœia it seems to me most important to have in the Council men who are familiar with the necessities of every-day practice.

The Registration of Foreign and Colonial Diplomas will be one of the most difficult duties of the Council, and one which, alike in the interest of the public and the profession, is of the utmost importance.

I am quite unconnected with the governing body of any university or corporation. Indeed, these institutions are already sufficiently represented in the Council. Like the great majority of you, I am engaged in family practice; and if you do me the honour to elect me, I will do my utmost to faithfully represent your views. In any questions that may arise between universities and corporations I will consider it my duty to listen to both sides, and to act according to what I conceive to be to the public advantage.

The relations of the public services to the Government and the local authorities shall have my constant and unremitting care.

A Scotchman by birth and education, I regard with pride the brilliant services which our country has rendered to the science and art of medicine, and to the advances of an enlightened system of education. But no local sympathies shall prevent me from using every endeavour to bring an unprejudiced mind to the consideration of every question that may come before the Council.

I annex a first list of my committee, which in the meantime is entirely composed of practitioners who reside in my own neighbourhood, and

I have the honour to be, Gentlemen, your obedient servant,

DUNDEE, September 1st, 1886. **ROBERT SINCLAIR, M.D.**

COMMITTEE.

DAVID GREIG, M.D., F.R.C.S.E., Dundee, *President*.

INDIAN MEDICAL SERVICE.
India Office, August 26th, 1886.

An Examination for at least twenty-five appointments as Surgeon in Her Majesty's Indian Medical Service will be held in London in February, 1887.

Copies of Regulations for the Examination, with information regarding the Pay and Retiring Allowances, &c., of Indian Medical Officers, may be obtained from the Military Secretary, India Office, London, S.W.

The exact date of the Examination will be announced hereafter.

ALLEN JOHNSON, Major-General,
Military Secretary.

Royal College of Physicians of London.

FIRST PROFESSIONAL EXAMINATION FOR THE LICENCE of candidates who shall have commenced their professional study before Oct. 1st, 1884. The next Examination will commence on Tuesday, Oct. 19th. The subjects of this Examination are Chemistry, including Chemical Physics, Materia Medica, Pharmacy, and Osteology. Registered Students are admitted to this Examination on producing satisfactory evidence of having received instruction on those subjects.

SECOND PROFESSIONAL EXAMINATION FOR THE LICENCE.—The next Examination will commence on Thursday, Oct. 7th. The subjects of this Examination are Anatomy and Physiology. Registered Students are admitted to this Examination after eighteen months of professional study at a recognised Medical School.

PASS EXAMINATION FOR THE LICENCE.—The next Examination will commence on Tuesday, Oct. 12th. Gentlemen who have completed four years of professional study, according to the College Regulations, are eligible for admission to this Examination.

Every candidate for the College Licence is required to produce a certificate of having acquired proficiency in Vaccination signed by a Vaccinator appointed or recognised by the Local Government Board.

No candidate will be admitted who has not given fourteen days' notice in writing to the Registrar of the College, with whom all certificates and testimonials required by the Bye-laws are to be left at the same time.

Pall Mall East. H. A. PITMAN, M.D., Registrar.

Royal College of Physicians of London.

The next PROFESSIONAL EXAMINATION for the MEMBERSHIP will commence on Thursday, Oct. 21st.

Candidates are required to give fourteen days' notice in writing to the Registrar of the College, with whom all certificates and testimonials required by the Bye-laws are to be left at the same time.

Pall Mall East. H. A. PITMAN, M.D., Registrar.

MEDICAL TRANSFER AND PARTNERSHIP,
32, Ludgate-hill.

Messrs. Orridge and Co., Medical Transfer Agents, Referees, and Valuers, in offering their services to the Profession have pleasure in referring to the fact that for ABOUT HALF A CENTURY the name of Mr. ORRIDGE has been known in the advertising columns of the leading medical journals as that of one to whom a very large proportion of the Medical Men throughout the kingdom have confided their interests in the adjustment of PARTNERSHIPS and TRANSFERS.

Purchasers who will communicate (confidentially) the NATURE and EXTENT of their wishes regarding investment can be apprised of appropriate opportunities as they occur.

On occasions where ADVICE is required in forming a correct conclusion as to the worth or eligibility of a Practice, Messrs. ORRIDGE and Co. trust that their familiarity with the various contingencies that govern value will be found of considerable service to those by whom they are employed.

Within easy distance of London.— Nucleus of good-class PRACTICE, with Poor-law appointments. Vendor has held the practice for many years. Premium required £350.—Particulars on application at

Messrs. ORRIDGE & Co.'s Offices, 32, Ludgate-hill, London, E.C.

Partnership.—A Medical Man in a

large middle-class London Practice is desirous of meeting with a well-qualified gentleman, aged about thirty. Must be active and fond of work, and a good Accoucheur.—Address, Alpha, THE LANCET Office, 423, Strand, W.C.

With View to Partnership.—Wanted,

qualified ASSISTANT. Churchman or Wesleyan.—State salary, and send carte, to Mr. Stanley, 12, Cheetham-hill-road, Manchester.

Wanted, by a Gentleman, aged 28,

doubly qualified, and late H.S. to a large lying-in institution, a PARTNERSHIP, or ASSISTANTSHIP with a view to same. Good-sized town preferred. Has had some experience of General Practice, and is not afraid of hard work. Good references can be given.—Address, A. L. S., Wyke House, Isleworth, Middlesex.

Coadjutor.—A middle-aged married

Medical Man (no family), who was for several years incumbent of a high-class General PRACTICE, is desirous of being associated with a practitioner, as Salaried PARTNER or otherwise. Advertiser's credentials and references are of the highest order, and include the names of leading consultants in London, Clergymen, and the principals of several large institutions of which he was visiting medical officer for many years.—Address, F. E. D., THE LANCET Office, 423, Strand, W.C.

Dispensary for Immediate Disposal.—

A Good Opportunity.—£30 will purchase the goodwill and stock. Situated in the City of London, in a leading thoroughfare. Low rent.—Apply, by letter, to Albert, 73, Farringdon-street, City.

Good Opening, with immediate returns.

Inquire at 331, Gray's-inn-road (first floor), King's-cross. Incoming reasonable.

For immediate Sale.—Price £50, or

best offer. A Nice-looking, Large CHEMIST'S SHOP, near London, replete with drugs and sundries. Suitable for a Surgeon or Dispensary.—Address, F. F., THE LANCET Office, 423, Strand, W.C.

Immediate.—For Sale.—Easily-worked

Unopposed PRACTICE in Somerset. One year's purchase required—viz., £700. Suitable for a young man beginning, as everything is practically secured to successor. Good house.—Apply, Layman, 50, Southwark-street, S.E.

An old-established Practice of about

£1000, in Wales, with excellent house. Advantageous terms may be arranged by eligible man with cash, able to commence at once. Welsh essential.—Apply, stating full particulars, to A. B., 17, Basinghall-street, London, E.C.

India.—Practice of £1000 per annum,

including lucrative and transferable appointments. Equal partnership introduction will be given. No one need write who is not possessed of £600. Full particulars.—Address, Maloja, THE LANCET Office, 423, Strand, W.C.

Required to Purchase, a good, well-established DISPENSARY, not in the E. district of London.—Particulars, in strict confidence, to M. D. H., THE LANCET Office, 423, Strand, W.C.

Chemist, established 16 years, with two businesses within a mile, where there is a splendid opening for speedily securing a valuable PRACTICE, wishes to meet with a Medical Man with a little cash, to convert one into a DISPENSARY. A chance seldom to be met with.—Apply, Marston, Chemist, East Dulwich, S.E.

£400 a year.—For immediate Disposal, a steadily increasing private PRACTICE in the suburbs of a large town in Kent. Expenses light. Great scope for increase. Returns chiefly cash. Premium less than a year's purchase.—Address, B. E., THE LANCET Office, 423, Strand, W.C.

Rio de Janeiro, Brazil.—A well-established English practitioner wishes to dispose of his PRACTICE for £1000, which produces on an average between £2400 and £3000 annually. The advertiser is willing to give for a year or so during the introduction £200 a year.—Address, for information, William Edney, Penryn, Cornwall.

Nucleus of a Suburban Practice for Immediate Disposal, at Norwood. Established one and three-quarter year. Every chance of being worked up into a first-class Practice. Good reasons for leaving. Nearly £50 taken first year. 160 names on books. Within half an hour of London.—Address, Sternum, THE LANCET Office, 423, Strand, W.C.

London Suburb.—Immediate.—To be Disposed of, in consequence of delicate health, a good middle-class PRACTICE, averaging £1500 per annum. Convenient house, with coach-house, stabling, and garden, held on a beneficial lease. An efficient introduction given. To effect a prompt transfer less than a year's purchase will be accepted.—Apply, personally, if possible, to Mrs. Needes, 9, Euston-road, N.W.

For Disposal.—Suburban Practice of £1500 per annum, capable of large increase by energetic man. Fair house and good garden in main thoroughfare. Ill-health the sole cause of relinquishing Practice. Price one year's purchase; half to be paid down, the remainder at end of introduction, or well secured.—Address, A. X., THE LANCET Office, 423, Strand, W.C.

To Chemists and Surgeons.—A Corner Open SURGERY, main road, opposite several turnings, established seventeen years, lease nineteen years unexpired, at £25 a year. Side entrance and garden. Returns between £300 and £400. Stock, fixtures, lease, and furniture, £230; part can remain; or any reasonable offer from an immediate purchaser.—Address, A. B., 130, Ialingword-road, Brighton, Sussex.

To Welshmen.—A Practice, the receipts from which vary from £950 to £1150 per annum, is offered for immediate Transfer. The Practice is almost entirely composed of various appointments in a colliery neighbourhood, and consequently there are hardly any bad debts connected with it. Vendor, who is anxious to complete other arrangements, will accept £600 from an immediate purchaser.—For fuller particulars, address M.B., M.S., THE LANCET Office, 423, Strand, W.C.

Wanted to Purchase by a middle-aged gentleman, L.R.C.P.L., M.R.C.S.E., L.S.A., a middle-class PRACTICE, with appointments, non-parochial preferred; receipts £500 per annum; not exceeding twenty miles from the Bank.—Address, F., care of Messrs. Burgoyne, Burbidges, & Co., 16, Coleman-street, London.

Important and splendid Opportunity for energetic active Surgeon with some capital, to join Advertiser (qualified) in opening a new and superior class of GENERAL DISPENSARY, in most important and good-class position in London. Large immediate practice certain, with good income. Most remunerative prices; Such an opportunity seldom occurs.—Address, B. B., THE LANCET Office, 423, Strand, W.C.

Nucleus for Disposal in a populous part of London. If sold immediately may be Purchased for £30, the value of the surgery fittings and drugs. House has for many years been the residence of a Medical Man. Rent light.—Address, Farmcy, THE LANCET Office, 423, Strand, W.C.

For Disposal, a well-established and steadily-increasing PRACTICE, in a thriving manufacturing town in the West Riding of Yorkshire. Actual receipts for 1885 were £725. No Club work, Expenses small. Good and convenient house. Ample scope for increase. Six months' introduction will safely transfer the connexion. Every investigation afforded. Premium one year's purchase.—Address, CLITO, THE LANCET Office, 423, Strand, W.C.

Gentleman, unqualified, single, English-man and Churchman, with full curriculum, &c., is now at liberty and open to a re engagement as General Assistant or Dispenser and Bookkeeper. Sixteen years' experience. Is a good practical Accoucheur, a neat Dispenser, and has frequently acted as Locum Tenens. Height 5 ft. 9 in., weight 11½ stone. First-rate testimonials. Abstainer.—Please address, stating salary, &c., N. B., 1, King-street, Leicester.

Consulting-room, with Share Waiting-room and attendance, wanted. Harley-street preferred. Hours 12.30 till 5, Monday excepted.—Lowest terms and particulars to A. Z., THE LANCET Office, 423, Strand, W.C.

Cavendish Square (close to).—Two CAPITAL HOUSES in the best part of Welbeck-street will be vacant at Michaelmas next, both in good condition.—For particulars and terms, apply to J. T. Bedford & Co., 3A, Wimpole-street, W.

South Devon.—A very nicely furnished 10-roomed House to Let, at once, for the winter or longer; good garden and stables. One and a quarter mile from a town, 6 from Torquay. Apply, W. L., Mr. Hearder, Stationer, Newton Abbott. No agents.

Chelsea. — Good Corner Shop and Dwelling House to Let. Well adapted for Dispensary or Chemist's. Thickly-populated neighbourhood. Rent £15 per annum.—Apply to Rogers, Chapman, & Thomas, 78, Gloucester-road, South Kensington.

To be Sold or Let, large newly-built house and grass land, as a SANATORIUM or HOTEL. Fully licensed. Open, healthy country, South of England, 800 feet above sea level, first-class hunting country, fishing and shooting.—Address, E. T. Hall, 57, Moorgate-street, E.C.

To Consulting Physicians.—To be Let, three mornings in the week, or every morning, the use of Furnished Consulting-rooms on the ground-floor, with man-servant attendance, situate between Grosvenor-square and Bond-street, W.—Address, C. S., THE LANCET Office, 423, Strand, W.C.

No. 20, Harley-street (only a few doors from Cavendish-square). This house, many years in occupation of the late Mr. Wordsworth, to be Sold or Let on moderate terms. One of the best professional houses in the West-end.—Apply to Elliott, Son, & Boyton, 6, Vere-street, W.

To Medical Practitioners.—A Widow Lady residing in a large double-fronted house, next to corner in a leading thoroughfare, is desirous of letting part of her handsomely furnished house to a gentleman about to commence practice. Excellent opportunity.—Apply A. B., Nichols, Newsagent, Church-street, Stoke Newington, N.

Folkestone, West-end, Sea Front.—A Gentleman's semi-detached RESIDENCE to be Sold, or on Lease; exceptionally built, dry soil, good water-supply, four reception-, eight bedrooms, fitted bath-room, very ample basement offices, efficient sanitary arrangements, ornamental shrubbery and tennis-lawn.—Apply to H. Clifford, Holden.

Cavendish-square (looking into).—To be Sold, by Private Treaty, the eighteen years' Lease (at a ground rent of £15 per annum) of a most conveniently arranged little Residence, in every way suited to the requirements of a Consulting Physician or Surgeon-Dentist.—Terms and particulars of Messrs. Walton & Lee, 20, Mount-street, Grosvenor-square, W.

Seaside.—Furnished Flats of six to nine good rooms. Very special terms to Medical Men for remainder of this season. Tennis, boating, bathing, billiard and music rooms. Park Mansions, Lowestoft. Grand sea and land views; best position on east coast. Will be found better and more homelike than usual seaside accommodation.—Apply to E. Estcourt, 8, Canfield-gardens, South Hampstead.

To Medical Practitioners.—No Premium.—A twelve-roomed HOUSE, with bath, now being put in thorough decorative repair, large garden, tennis lawn, stabling, coach-house, and rooms; side entrance for surgery. Situated in the heart of an immense newly populated neighbourhood, being Stamford House, 18, St. Ann's-road, Stamford-hill, two minutes from station; rent on lease 70 guineas.

To be Let or Sold, "Park Lodge," Southfields, Wandsworth, S.W. — DETACHED RESIDENCE (corner of the Wimbledon Park-road), suitable for a Medical Man, containing double drawing-room, large dining-room, store-room, breakfast-room, butler's-room, kitchen, scullery, boot-room, seven bed-rooms, dressing-room, bath-room (fitted with hot and cold water), three w.c.'s, and every other convenience. Double coachhouse, stable, and loose box. Large garden (well stocked with fruit trees and all kinds of shrubs), and good lawn. Rent £100 a year. Apply on the premises, as above, or to Mr. J. Passmore, 4, Paternoster-buildings, London, E.C.

Assistancy (in-door) wanted, by un-qualified Man (aged twenty-six), well up in Midwifery and General Practice, where full opportunities would be given for Lectures, &c., in exchange for night-work, Dispensing, &c. Small salary. Excellent references to late and present principals. Neighbourhood of Leeds, Manchester, or Newcastle preferred.—Address, C. B., THE LANCET Office, 423, Strand, W.C.

BURT'S LIQUOR VESICATORIUS.

THE BEST AND SAFEST BLISTERING FLUID.

This preparation of Cantharidine was introduced to the Profession in 1841. It obtained directly high testimonials of approval from very eminent Practitioners, and subsequently the Prize Medal and Certificate from the Commissioners of the Exhibition of 1851. It has been in continuous use at home and abroad ever since. It is cleanly, quick, and sure in operation, causes but slight inconvenience to patients, and is attended with little danger of strangury or sloughing, being thus extremely valuable in cases of infancy or weakly constitutions. It is especially commended for use in diseases of the brain attended with excitement.—BARCLAY & SONS, 95, Farringdon-street, E.C., Sole Wholesale Agents. Retail by all Chemists. In stoppered bottles, 1 oz. 4s., 2 oz. 7s., 4 oz. 12s. 6d., &c.

Cox's Tasteless Pills.

By Royal Letters Patent, Dated and Sealed April 13th, 1854.

These Pearl-Coated Pills were introduced to the Medical Profession by the present proprietors more than thirty years ago, and many thousands of unsolicited testimonials have been received from the highest Medical authorities, and are now used, and have been used for many years past, by the largest and best conducted Hospitals and Dispensaries. Of course success like this has led to many imitations, and highly varnished pills, made to resemble ours, have been introduced by some unscrupulous people. Many of these Pills pass through the stomach unaltered, and a useful invention is thus likely to be brought into disrepute. The most impudent assertions are made by some, who combine in one incongruous whole, the trades of druggists' sundrymen, retail druggists, soap makers, and horse and cattle medicine vendors. We make and sell nothing but Pills, and have testimonials from regular customers residing in China, Australia, and every part of the civilised world, as well as from friends in almost every town and village in the Kingdom; and our trade, which is constantly increasing, is perhaps four or five times as large as all the rest of our copyists put together. Any formula dispensed and covered, and samples, with a list of Pills from 500 different forms which are kept in stock, will be forwarded free on application. The Registrar of Trade Marks (after giving the usual public notice prescribed by Parliament to allow of opposition) has granted us the above "TRADE MARK," thus officially recognising us as the "Original Makers of Tasteless Pills," and no Pills will be sent out without this Mark on all bottles and packages. *All goods sent post or carriage free on the same day as the order is received.*

ARTHUR H. COX & CO., Tasteless Pill Manufacturers,
St. Martin's-place, Brighton.
Telegraphic address—"Cox, Brighton."

CIMOLITE (Gr. κιμωλια)

Terra Cimolia (popularly known as "WHITE FULLER'S EARTH"). A fine and very scarce natural variety of Steatite, composed principally of Silicate of Magnesium, and reduced by the most careful trituration and sifting to the FINEST POSSIBLE POWDER.

Highly recommended by the most eminent Dermatologists. As a Dusting Powder in Eczema it is simply invaluable, and is infinitely superior to Oxide of Zinc, Prepared Calamine, Carbonate of Bismuth, Powdered Starch, or any other Amylaceous Compound; also in all cases of Infantile Chafing, for most Irritations of the Skin, and all Excoriations. For the Profession *only*, in Tins, free per post, send 18 penny stamps. For the general public, post free, send 14 or 36 penny stamps.

Introduced into medical practice and prepared by John Taylor, Chemist (many years with Squire, Oxford-street), 13, Baker-street, Portman-square, London. W.

J. ROBBINS & Co. 147 OXFORD ST.

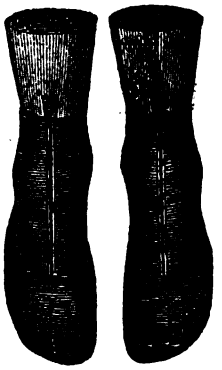
DOWIE & MARSHALL

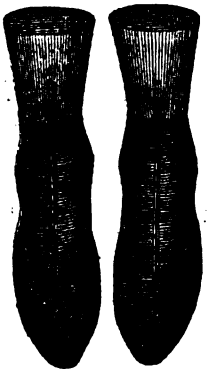
BOOTMAKERS,



455, WEST STRAND, LONDON

(MIDWAY BETWEEN THE CHARING-CROSS HOTEL AND TRAFALGAR-SQUARE),

have been noted for sixty-two years for the excellence and peculiar comfort of their BOOTS and SHOES.



They are made so that the toes (the great toes especially) have their full play and liberty of extension under the weight of the body, room for the great toe being provided quite straight at the inside, as Fig. 1, instead of being curved off to the centre of the foot, as Fig. 2.

FIG. 1.

Registered 2775.

FIG. 2.

Registered 2775.

The heels are made low and broad.

The jury of THE INTERNATIONAL HEALTH EXHIBITION awarded a SILVER MEDAL to Dowie & Marshall for the excellence of their Boots and Shoes.

Also a jury composed of Medical Gentlemen awarded a SILVER MEDAL to Dowie & Marshall for the excellence of their Boots and Shoes at the Exhibition of THE NATIONAL HEALTH SOCIETY, 1883.

Gentlemen's, Ladies', and Children's Boots and Shoes are made, and special attention is given to cases of weakness and distortion, the suggestions of the Profession being strictly carried out.

Illustrated Price List gratis.

Country customers should take outlines of their feet with a pencil standing, and send an old boot as pattern.

Customers to whom economy is an object are invited to send for samples of the following for inspection:—

Gentlemen's Oxford Shoes	17s.
Gentlemen's Lace or Elastic-side Boots ...	21s.
Ladies' Lace or Button Boots	17s.

Little children's shoes are made of the exact shape o their beautifully formed feet, with ample room for the toes to spread out. The prices begin at 3s. 10d.

455, West Strand, London.
